> than burning the wood provides.

It's called a Craft Wood Insert. It is a STOVE, not an open fireplace.
Upstairs
uses an airtight screen glass front with a built-in blower. I can guarantee
you we lose
very little heat from the use of these fireplaces. If you run either of them
at full tilt (fan)
it will get too hot-even if the temp outside is 15 degrees. Yes, a naked
fireplace is
extremely inefficient, and takes out more heat than it produces. Mine are
set up to
MAKE heat, not take it away.

>What's your problem?

I don't have a problem, Brian. I just know enough about the mechanics of
towers,
wood poles and foundations to know that asphalt is not a good material for
foundations. Ever see a house with a poured-asphalt foundation?

>Even on a warm day, my 12'x30'x3" driveway is stable
>enough to park heavy equipment on without denting it.

So? A driveway is not the same thing as a tower foundation. How "heavy" is that "heavy equipment"? Does it have rubber tires? How many pounds per square inch does it exert when sitting on the driveway?

>equivalent of 30 some years old. :)

HAW!

Actually, there are a bunch of demographic things going on. I know many hams
who fall into the following categories:

- Young people who are on the quiet side, who are active hams but "invisible"
at
club meetings, hamfests and other in-person settings.

- Senior citizens who are actually newbies. They took up ham radio as a retirement activity and are having a blast. The vanity call rules hide the fact that they are relatively new to ham radio.

- Hams in their 20s thu 50s who are busy with careers, families, etc. They simply
do not get blocks of predictable free time that permit them to do things like attend
club meetings, etc. Some of them are almost inactive, with little or no equipment.

End result is that there are lots of "hidden" hams out there. Who knows how many
of the 680,000 or so fit into those categories?

>in propagation delay over ionospheric paths.

Unlikely considering such work was already begun in the rest of
the radio world over four decades ago.

Computer-decoding of variable-spacing morse codes, enough to
enable automatic speed adjustment over wide rate range has
already been done on various platforms. Such remains little more
than a toy diversion, a programming exercise, of no practical
value in the rest of the radio world.

In that four-decade period up to time-now, communications has
shifted AWAY from the radio frequencies which require ionospheric
"bounce" conditions.

The myth continues that ionospheric path changes cause phase
shifts which make phase-shift modulations poor. Present-day
phase-shift modulations are being done as they were over a decade
ago. Such have been extensively tested in digital HF broadcasting.
Quadrature amplitude-phase shift modulations are a part of the
ALE protocol on HF.

This is an endearing quality of the Amateur Extra Super Special
licensee wherein they assume their AMATEUR license is also
the right to insult, belittle, and generally act boorishly to all
"lesser" individuals.

See communications by well-known 1x2s in here...namely K3LT,
K4YZ, W0EX as the most prolific.

The less-than-unity Hertz frequencies ARE used in electronics,
namely in biosciences for sensing various body electrical signals,
and in geological-seismic sciences, atmospherics, some parts
of marine-acquatic sciences, mechanical stability structures in
architecture and mechanical engineering.

Electronics is a fairly exact part of physics with very little
assumption involved.

Your "experience" in electronics seems limited to that of
amateur radio at a rather primitive level.

:-)

> Matters not to me, Lennie. I am just having fun poking so many holes in
>your lies and rants that the rest doesn't matter. All that night school down
>the drain, eh Your Putziness?

Obsession with certain newsgroup communicators doesn't matter
to anyone but yourself.

NB: College-credit courses are still college credit regardless of
class hours.

There is still time to get some formal education and learn something
even if fortysomething in age. Or, one can wave their AMATEUR
license around like they are a superior being and pretend they know
"all about radio."

It is still possible for a non-MD "health professional" to become a
Medical Doctor before reaching 50. Difficult but not impossible.
That way a claim of "saving lives" could be true instead of taking
direction from others who are MDs.

Some required formal classroom schedules CAN be done at night.

> And I limit that to "this NG". I wish in NO WAY to demean or detract
from
>the excellent efforts of several gentlemen (ie: W1RFI) who are published on a
>regular basis.

:-) Only if it serves your purpose in achieving (what you think) are
message points in here.

"Published on a regular basis" isn't a "certificate" or "license" or
anything but being printed on real paper with real ink. Anyone
with a printing press and an initial purchase of lots of blank paper
can do that. The National Enquirer and Erich von Daniken come
to mind. :-)

>

>
> Just as knowing that anything authored by "lenover21" will be a stinging
>slap at 675,000 LICENSED Amateur Radio operators, Lennie.

Incorrect. You are NOT "representative" of anyone but yourself.

Having an amateur radio license is NOT a "license" to insult
others or act in an uncivil manner...on the "air" or on a
newsgroup.

> And besides, "licensed operator" is my "title", "Putz" is yours. The
>only thing you and I have in common is that we each earned our respective
>"titles".
>
> Congratulations on yours, Putz.

The word "putz" is a Yiddish insult word. It is not "awarded" nor
is there any "license" involved in using such an insult word.

Using it does not make your point except to point out your
general nature.

It does give others an opinion of US amateur radio.

> And in YOUR case, Lennie....a NOVICE license is bigger than yours.

That is childish name-calling again. The size of a license does
not matter, only the allocated bands and modes and other
regulations pertaining to a particular class of AMATEUR license.

You are free to continue the delusion that you are "more expert"
in any type, kind, format, or activity of radio. That pleases you
along with the freedom to insult, belittle, and generally

pejorate anyone not holding your opinions...which you do repeatedly. That does not elevate you above others except in your imagination.

Remember that your actions reflect on US amateur radio as perceived by all who see, hear, and observe you.

You can address the subject...or continue insulting, belittling, and pejorating others off the subject as you have been doing.

Your choice. All have seen which choice you made in the past.

I agree that those that did come in "under the bar" (such as myself
categorically speaking) should not be proclaiming all-inclusive knowledge
of everything in ham radio. I do not, nor will I ever claim that I know
everything about ham radio, even if I could go 30 years back and get an
extra ticket, I still won't. There is so much to learn that it would truly
take multiple lifetimes to learn everything. That is the shear beauty of
the hobby.

Now, I may have specific areas of knowledge of the hobby, but I will not
claim total knowledge. I am not the "typical technician" as you have
referred to here in the newsgroups, and I think that makes me a special
breed. Unfortunately there is not a ton like me, which would definitely
improve YOUR opinions about us techs.

The constant bickering within this hobby about who took what tests and when,
instead of working on constant positive change will be the final death of
the hobby, as opposed to dropping or adding of certain tests.

Ryan

I managed a KH6 trip and loved it! Of course, we were way off the beaten path, avoiding the main beaches like the plague. We stayed at a few of the B&Bs, one at a nut farm. We got to see the volcano, and did a bit of hiking. The really cool part was when we walked about 2 miles to a green-sand beach. For about a half hour, we were the only ones there!

>Not nearly as much as your predictable reactions amuse me, Ed!

Yes, I am consistent, aren't I. It is my belief that the accomplishments of a ham after he or she passes their test are more important to ham radio than the test. It is your belief that the test gives status to the ham that is never overtaken by later accomplishments. This is America, and we are each entitled to our beliefs.

I am curious, though; if you know what the response will be, why would you elicit it? I have seen small children push the button to hear the bell repeatedly, but most people grow past that at a relatively young age.

Oh?

Let's have a reference, Lennie. The SMALLEST reference to frequency I
find is the Hertz.

Some standard reference book would be fine.

I find milliamps and microamps for doing what you suggest, but not
"millihertz".

There's a lot more to it. The written or telegraphed word can be used to communicate all sorts of emotions and context - if it's done right. Writers have been doing it for generations. Shakespeare, Vonnegut, Keillor, and many others don't need emoticons.

Of course reading is a different skill than listening. Some people have trouble understanding the nuances of the written word - they haven't developed the skill. I know some people who have trouble using the telephone because they cannot see facial expressions, gestures, etc.

The behavior of some people on the internet disproves the idea that it is somehow difficult to cuss or be insulting using nonvoice modes. Just look at the posts of some rrappers.

The main reason hams are so well-behaved on CW is not primarily due to the mode itself. It has to do with the traditions and culture of the amateur CW operator - a tradition and culture that is worthy of preservation.

In this case Len is correct. Millihertz is a common scientific unit of measurement. As an example, the HAARP project in Alaska includes an induction magnetometer. A quote from their literature..... "The major signal categories detected by the induction magnetometer are short period magnetic pulsations such as Pc1, Pc2, Pc3, PiB, and PiC in a frequency range above a few tens of milliHertz. Among these, the induction magnetometer most efficiently detects Pc1 waves in the frequency range from 0.1 Hz to 3 Hz."

We're having a new kitchen done, and I did the wiring. The electrical
inspector said it was good except I missed the green pigtail ground wires
to tie the metal boxes to the safety ground on the outlets. Fail. So
I put in the pigtails. Later that day the inspector squeezes in another visit,
now I pass. No grease needed. Codes usually have good reasons behind
them, I imagine that it has been found that the mounting screws to hold
the outlets to the boxes are sometimes not adequate to pass 20 amps of
short circuit to ground if that ever happens. So the pigtails do it.
The cost of the pigtails was far lower than any bribe, and I wouldn't
insult the inspector attempting a bribe anyway. And then there would
be the jail aspect on top of that.

The FCC doesn't ask civil engineering questions on the ham tests, so
we should not expect to know enough to successfully install a safe
tower. If you want a tower, the permits and engineering costs are
a part of the price.

Am getting my Toyota Land Cruiser ready for a month-long
vacation in the outback. In your esteemed opinion, what would
you recommend is the best all around mobile antenna on the market?
We'll be traveling at interstate speeds, as well as 4-wheeling in the
boondocks. My girlfriend is against having any weird looking
antennas on the vehicle which draw attention to us, as she is sometimes
recognized in public. She prefers as low a profile as possible, so what
antenna would best fit all these requirements?

Thanks es 73,

Eduardo "Beans" Hernandez

Since netnews is not real time, a posting can be composed and edited to
achieve any desired level of emotionalism. If a poster's hands are shaking
with emotion to the extent that he cannot type, he can wait a few minutes
until his hands quit shaking. One cannot do that with real time CW. Real
time emotional outbursts and CW are simply incompatible.

Extreme emotionalism is also incompatible with real time keyboard modes. The
only reason that extreme emotionalism can be accomplished on a newsgroup is
that the newsgroup is NOT real time and a poster can wait for the physical
manifestations of extreme emotions to subside.

> The main reason hams are so well-behaved on CW is not primarily due to the
> mode itself.

See above. Extreme emotionalism and real time CW are virtually impossible
to accomplish at the same time.

"Mind control?" The observation of "raving lunatic" was in response to the type of comment of another. While a bit more exaggerated than might be warranted, such an observation is in no way indicative of "mind control."

Please see my previous message.

Brian has NOT proposed "more code testing in amateur radio."

He has commented on the abilities of the ALREADY LICENSED.
Since he wrote "Extra" that signifies a license class which has
the most tests without any prospect of ever having any more
tests to take.

Have you answered Brian's query as to whether or not he should
write more slowly for better reading?

>Do you see everything through the filter of amateur testing?

Brian clearly wrote "old, pre-restructuring Extra." That means one who was already licensed in amateur radio. Further, as a grant of Amateur Extra indicates, the "ultimate" in license testing would have already been accomplished.

Ergo, there is NO "filter of amateur testing" involved.

There IS and remains the mind-set of the "old, pre-restructuring" licensee...which is not that good an attitude, witness some of the old, pre-restructuring licensee correspondents in here.

The ARRL has made many, many mentions in the past in regards to sending "good" (properly formed character spacings) morse code. That predates 1928 and the first publishing of The Amateur's Code.

None of that concerns any "filter of amateur testing" but rather the continuation of what a major membership organization considers to be good radio amateur practice. Why would you want to subvert or misdirect your employer's intentions?

And, why do you always "reply" with questions?

OK, how about this:

First off, S25.5 will probably be gone after WRC 2003, so we need to look beyond that. FCC will most probably drop code testing for HF/MF access as soon as S25.5 goes, too.

So the following license structure/test structure is suggested:

1) Three classes of license: Basic, Intermediate, Full (change the names if you don't like them)

2) HF/MF bands split into subbands by mode and split again by license class. Some bands may be split by mode only. ("Mode" meaning "narrow/CW/digital" vs. "wide/analog phone-image/digital"

3) "Basic" license test is simple 20-25 question exam on regs, procedures, and safety. Very little technical and RF exposure stuff. Main objective is to keep Basics out of trouble. Basics get 100-150 watts on HF/MF and 25 watts or so on VHF/UHF (power level determined by RF exposure limits). Modes are CW, analog voice, PSK31 and many of the other common data modes like packet. Basics cannot be VEs, control ops for repeaters, or club trustees. Basics get most VHF/UHF and about half of HF/MF spectrum. Basic is meant as the entry level. Easy to get, lots of privs, yet there's still a reason to upgrade.

4) "Intermediate" license test is more complex 50-60 question exam on regs, procedures, safety and technical stuff. Intermediates get 300-400 watts on all bands, all modes. Intermediates can be VEs after qualification (see below), control ops for repeaters, and club trustees. Intermediates get all VHF/UHF and about three quarters (or more) of HF/MF spectrum. Intermediate requires at least one year experience as a Basic.

5) "Full" license test is quite complex 100-120 question exam on regs, procedures, safety and technical stuff. Mostly technical, with some regs to cover expanded privs. Fulls get all privileges, modes, bands, etc. except that Fulls can be VEs only after qualification (see below). Full license requires at least one year (preferably two years) as an Intermediate.

6) All licenses are 10 year and fully renewable/modifiable.

7) Basics have six-character calls, Intermediates have five- or six-character calls, and Fulls have four-, five-, or six-character calls. Nobody has to give up an existing callsign.

8) There is a separate 30-35 question test for VE qualification, open to Intermediates and Fulls, which allows them to be VEs. Existing VEs are grandfathered.

9) Existing Novices become Basics, existing Techs, Tech Pluses, Generals and Advanceds become Intermediates, and existing Extras become Fulls.

10) Experience requirement is not waived for existing hams to upgrade, but their time in existing classes counts.

End result is a system that is easy to get into (Basic is envisioned as a 21st century version of the Novice) and has reasonable but meaningful steps to reach full privileges. Testing matches the privs granted. Power levels are set about one S-unit apart. Current hams would be allowed to use the existing power levels so nobody loses privileges. There are only three license classes and four written tests, so FCC doesn't have more work.

The prefix system used in science and technology permits use with any suffix. Thus things like Megahenry or Gigafarad are valid, though you're not likely to ever need to mention such quantities in ham radio. Or picohertz.

Why does nobody ever say "Megameter" instead of "1000 Kilometers"?

If you make the power levels on the learners permit the lower of 200 watts
or match rf evaluation limits for all bands (vlf, mf, hf, vhf+) I'd be more

inclined to agree. Thats 200 watts on 160M (rf says 500watts) and 50 watts on 10M.

> Modes are CW, analog voice, PSK31 and many of the other common data modes

4062. MURS gets boost

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-23 21:35:06 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0205231335.52663b3e@posting.google.com>
Source record: 43331
Cross-posted to: alt.radio.family,rec.radio.amateur.policy,rec.radio.amateur.digital.misc,rec.radio.cb,rec.radio.amateur.misc

The latest MURS rules changes now simply limit transmitter power output to 2W, and remove the old 2W ERP restriction:

http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-02-139A1.doc

This effectively raises the ERP limit to about 10W for omni base stations, and about 50W with a directional beam antenna.

With licenseless services like MURS beginning to flourish, Amateur Radio just keeps getting less relevant.

Horseshoe7, Stewart, N0MHS

>cool part was when we walked about 2 miles to a green-sand beach. For about a
>half hour, we were the only ones there!

My one and only trip to the Islands was a complete bust. It was at the emd of a business trip to Guam at the height of the fuel shortage in early 1974. On the way from the airport to the hotel, my host crashed into the rear end of the car ahead, sending three of us to the hospital. After half a day there being X-rayed, patched up and interviewed by Hawaii 5-0 (actually the accident investigator of Honolulu PD), all I wanted to do was to get to the hotel, pop a pain pill, and go to sleep. No one had any gasoline so my view of the island was confined to the three downtown TV stations that i had to inspect and to the Ala Moana Shopping Center after hours.

I'm not a beach person, so that facet of Hawaii didn't interest me. At the end of the week I still hurt, and I was more than happy to get on a plane for home and bid Aloha to Hawaii.

My wife had enough of the Islands when she and her pre-school son spent four months on Kauai while she was working in the construction crew for the main resort there (Hilton ?) thirty years ago. She has no desire to go back either.

My ex- and her friend escape to the Islands regularly. She's welcome to it.

Where in any of these posts did a "big tower" or an "80M beam" or
"greasing" anyone's palm come in? We're talking about doing it by
the book.

Heck, if I'm going to grease someone's palm, or vice versa, it's
going to be while I'm wearing a wire and the State Police tech
squad is in the next house recording it.

There are areas of the country where baksheesh ("cost of doing
business" payments to everyone from the delivery truck driver on up)
is expected.

Fortunately I refuse to live in such places or do those
activities.

Perhaps Brian lives in such an area - or has seen it referred to
on TV.

Because the obsession with decimalization has to stop somewhere. While I am resigned to Keys and Klicks they are, like most metric units, not exactly people-sized. A mile, in legend 1000 paces of the Roman army, is possible to visualize and whatever else may be said for the Imperial system it does not have the decimal fetish. A Klick can also be visualized and 1000 km trips are not unusual but making sense of of a Megameter is simply impossible without first making a mental translation to 1000 Klicks.

We got a decimal currency via Tom Jefferson who was something of a Francophile and the US Treasury spent the better part of the 19th century trying to stomp out the quarter in favor of the double-dime. They obviously failed miserably selling the bi-quinary fetish that comes of treating ten as an icon.

Life would be a lot simpler if we had been born with 12 fingers and toes.

>Can you say CB x 2..LOL

Why not, Ham Radio has turned into Cb, might as well make MURS the same way. Besides I have a few Delta S at over 100 Watts that will easily go there, so I might as well put them there. I would probably be able to sell them to some of ther new Murs CB ers for a good price.

I've seen poured concrete foundations cracked and leaking. Do you suppose a
poured asphalt foundation would flex instead of break? Wonder if earthquake
country or NORAD would be interested in a foundation material with a little
give.

Bob, thanks for the benefit of doubt, but I'm quite serious. The PCTA cannot have it both ways. Either the exam is relavent and is to be relied upon that on old, pre-restructuring era Extra engages in superior Amateur Radio Practice, or it is less than relavent, not to be relied upon. Time for Larry, Dick, and Steve put up, shut up, or suck up.

So far Phil has called this old Extra an idiot.

Oh, agreed. I once taught a Tech class. Was I qualified? Maybe not. But surrounded by "higher" class amateurs, I was one of the few that was willing. I've set up at some BSA Jamborees, Royal Rangers, etc. I'd like to back out of scoutmaster stuff and just be a merit badge counselor. I'll get there.

Brian

Welp Dave, if you PCTAs can rant and rave that Len cannot represent or even comment on amateur related issues, then it only stands to reason that only licensed individuals are capable. Now whether Dick claims to represent amateur radio or not, it becomes irrelevant. By virtue of holding a license he represents amateur radio.

Which way do you want it?

What obsolete documents does the FCC reference now?

Part 97 makes NO reference at all to S25.5 today. The FCC
acknowledged the existence of S25.5 as the only justification
to retain any code testing at all...BUT that isn't codified into
the regulations.

Not in Part 97. Recall the thread where comm lawyer Phil couldn't produce
the ITU document that title 47 references for the specification of Morse
code?

Ed. Tho I have little experience with HF mobile antennas, I have read very
good reports about the Outbacker antenna. You might ask for input from
someone who has used it. I understand that grounding to the frame of your
Land Cruiser is very important as is grounding the hood as well.
Keep me up to date if you will.
Who knows? Maybe one day I will want to use my FT-847 as a mobile rig.
Arf!

In a CA 75m mobile shootout, the Outbacker was 8.5 dB down from well-designed
bugcatchers and screwdrivers. For every 7 watts radiated by the bugcatchers
and screwdrivers, the Outbacker radiated one watt and dissipated six watts
as heat. How can that be called "good"?

> Union Electric treats the pole with creosote to ward off bugs.

In some areas (Florida, for one), the utilities are using precast concrete
utility poles.

> The equivalent for steel, galvanizing, wouldn't last very long
> in dirt..

Yup.

> Anyone who would bury 20% of a steel tower is an idiot
> when the cost of a properly designed and poured concrete base is
> far less than the cost of a section of tower.

The performance will be better, too.
>
> And what building official would issue a permit for a steel tower
> buried in dirt?

Or asphalt.

There is another angle to this. Poorly engineered tower proposals
reflect badly on the ARS. Towers are a matter of public safety,
so a poorly engineered proposal (like using asphalt instead of
concrete) doesn't help the ARS one bit.

> Go Sterling Marlin!

Not so! The Ham freqs. WILL continue to be relevant. Look for the CB'ers to get into these five freqs and ruin them. Two watts? Bah! Since when has a CB'er ever played by the rules? Look for them to buy Ham two meter rigs, modify the TX, buy an amplifier with five watts in, 100 out and modify it, too. They will ruin the MURS frequencies within five years. Mark my words. Remember when CB was licensed and limited to 4 watts? Good concept, but it was doomed for failure from the outset. The MURS frequencies will meet the same fate.
The MURS frequencies will soon be yet another cluster f*ck akin to the eleven meter band, and the FCC will have not the resources to police the miscreants. It will be interesting to see how much interference these "new" CB freqs. cause to the nationwide cable TV system, too.
It will only get worse as power contests, filthy language, arguments, malicious interference and general eleven meter intellect creates havoc on these five frequencies. Ol' Bubba with a cheap, ungrounded station and a gut full of Old Milwaukee is gonna have a ball!
Once the radio mfgrs. get up and running (making $$$) all Hell will break loose. I give it five years, tops, before the rabble rousers ruin it for all.
Gee...yet another FCC idea gone bad.
And the FCC wants to usurp some of OUR bands for commercial interests? This

makes you wonder who the Hell is watching the store, eh?

You fail to mention that FCC degraded MURS from Part 90 to the Part 95 (CB) category, removed some previously allowed modes, and specifically requires that the radios be certificated, thus blowing away your outlaw chant about using Yaesu VX-5R.

Bottom line, it's a 2W CB service, good for not much more than a local intercom service. Fine for some limited requirements, but hardly competition to the worldwide capabilities of even a very modest Amateur Radio station.

With all kind wishes,

de Hans, K0HB

I'm not all that sure that they will; retail price for a decent VHF FM
HT, allowing for a reasonable profit, probably bottoms out around $30.
Retail for an FRS is around $30. Retail for a low-end CB is around
$50. Which will people want: 14 channels of burping cussing and farty
noises, 40 channels of burping cussing and farty noises, or 5 channels
of burping cussing and farty noises with the occasional Taco Cabana
drive-thru order on one of them?

I will take your answer at face value, Mike, however I've been at this a few years now, and I have never seen the term "millihertz" used in any reference for biological monitoring applications.

The "ayes" having been said, I will stand corrected and apreciate the comments, but I would still appreciate some reference as to what application that it is used in "biology". It's not used in any common reference of cardiac monitoring that I am aware of.

Because Kilometer is analogous to a mile, and there is no special name for any quantity of miles. Too many English system users still alive.

Which would you rather say: 9,438 Terameters or 1 light-year?

Ah! Had that been a "true" amateur examination question, he would have only had to pick the correct answer. He had no choices to select from! :-)

"Difference" implies mathematical subtraction, not the ratio of values.

I have seen some TV news stories about that sort of thing, too. They involved multi-million dollar deals, not some ham wanting to bribe the building inspector so he can put up a tower in asphalt or dirt instead of concrete. I would guess that most "bribable" building inspectors would decide that the risk of being found out, and possibly sued, when such an obvious blantant violation of good engineering practice failed outweighed the paltry bribe that such an "oversight" would fetch on the black market.

In summary, I doubt that any building inspector has been bribed to allow a ham tower to be installed in asphalt or dirt.

Most of what's in the National Electrical Code (NEC) is there because
somebody paid for it with their house - or their life. The pigtail thing is
there for just the reason you specify - mounting screws cannot be
depended on 100% for the safety ground connection.
>
>The FCC doesn't ask civil engineering questions on the ham tests, so

Frankly, I think you're rant lacks basis. Kenwood, Yaesu, and Icom
have been leapfrogging each others achievements for years. To say
that the other's stuff is suddenly "boring" says very little about
what's coming.

In my personal opinion, they're all garbage next to the likes of the Elecraft K2. That's a REAL radio.

>to ever come out of Tenn.

I have one of those "great rigs" from Ten Tec and the 1970s. The dynamic range was awful, the packaging was flimsy, and the radio itself was hardly a model of stability. This digital push button stuff is the future for mass produced radios. It's cheaper, more stable, and it frankly performs better than most mass produced analog gear.

Yes, you could build an analog radio with better overall performance than a lot of this new digital stuff. But you'd have to invest a lot of careful component selection and tweaking to get it running. And that would cost more, *much* more than you'd be willing to pay.

While criticism of a radio's performance/price ratio is valid, your notions of what's a good construction technique or design choices is pointless. Try building a few radios of your own before spewing this nonsense about other manufacturer's choices.

>I could not agree with you more strongly on the "trinket vendors"!

>what Hamvention really is folks!) then I had better see stuff for
>sale that I DO NOT SEE at the local every-weekend flea market
>just down the road, where the admission and parking is free!!

Then don't spend any time or money on them. They'll get the idea and not return. The problem I have with your approach is that determining this sort of thing up front is fraught with problems and potential law suits. Your definition of what a "trinket vendor" is happens to be a judgement call.

>I've never been back to the hamfests that let these
>turkeys into their flea market and I never will.

Good bye.

>I could not make Dayton, and I really hope that
>it is not turning into another consumer

>tell me these wristwatch-dealers did not show up and
>were allowed to set up and sell like they did
>someplace in NC last year!)

What's it to you? If you're offended, don't go. Did you buy any antique radio gear? Were you offended that they were there, even though we're talking about old radios which were left over consumer items from the 1920s and 1930s? Get over it.

If you don't support a hamfest by attending one, then, well, there's always E-Bay. Don't like them? Gee, Mr. Grouch, what do you like? This rant is like cursing at the weather. Grow up.

You are really doing a lot to clear up questions about how things are viewed at HQ, Ed. If the past no longer matters, and only what is done today, why not just come out and say so? At least there would no longer be any question about how decisions are made there.

However, the restrictions on what types of pre-5/2002 Part 90
certificated radios will be allowed on MURS has been greatly reduced.
Now, most any 2W-under Part 90 radio will be allowed. Along with the
2W Transmitter Output clarification, this was the most important part
of the ruling, as there was great confusion as to what was legal.

> Bottom line, it's a 2W CB service, good for not much more than a local
> intercom service. Fine for some limited requirements, but hardly
> competition to the worldwide capabilities of even a very modest Amateur
> Radio station.

The capabilities of a well built MURS station can now compete with
those of a Technician Class station. Furthermore, MURS users have
certain privileges that Amateurs don't... for example, MURS users can
do business, or download short e-mails of any type of content to their
Mobile PDAs from Internet gateways.

The fact stands - MURS has been made a more capable service, and now
offers capabilities and privileges on the order of those of the
Amateur Technician Class license.

Not even close to being comparable.

MURS -- 5 specific frequencies, less than 100 Kilohertz of total bandwidth.
Tech -- Millions of frequencies 23,962,000 Kilohertz of total bandwidth.
Advantage Tech 239,620-to-1

MURS -- One band
Tech -- Seventeen bands
Advantage Tech 17-to-1

MURS -- 2W output
Tech -- 1500W output
Advantage Tech 750-to-1

MURS -- Antenna height 20'
Tech -- No antenna height restriction.
Advantage -- Tech

MURS -- FCC certificated radios only. Modifications illegal.
Tech -- Free to use any purchased, homebrewed, or modified radio without FCC
certification.
Advantage -- Tech

MURS -- Operation restricted by US borders.
Tech -- Reciprocal operating agreements with nations all around the globe.
Advantage -- Tech

I could go on and on, but I'm sure you're getting the picture!

Comparing MURS to even the lowest privileged Amateur Radio license is like
comparing a tricycle to a Lamborghini, and the comparison suffers even worse
when you compare MURS to a General or Extra class Amateur Radio license.

That is an over statement if I ever saw one. MURS can no way
compete with any part of ham radio, even Tech class stations.

> Furthermore, MURS users have
> certain privileges that Amateurs don't... for example, MURS users can

Big deal, there are cell phones for business and internet for
e-mails.

Really, how many frequencies for MURS as compared to those
available for Tech class licensees? Compare the power levels
allowed by MURS as allowed for Tech Class. You must be dreaming.

True if all you want to do is this one thing. But what other license is
there
that lets you use various different modes in various different kinds of
bands? I could drive home with the 2m rig in the car, and once I'm
home I can work some DX on HF with CW or SSB or amtor or such.

This is the same old argument that we've been hearing for years... FRS
will become just like 11m(with illegal amplifiers), or MURS will
become just like 11m... of course it has been proved completely
wrong. The reason that folks on 11m went to amplifiers was because it
actually helps them increase their communications range - the fact
that they interfere with others when the skip is out is simply a
side-effect. With no skip, there is no incentive to go with
exceedingly higher power in the first place, because it serves
virtually no useful purpose on VHF/UHF.

So - you're going to have to come up with a better argument, this one
just doesn't wash any longer. Thankfully the FCC has figured this
out... too bad many hams haven't.

There's the "no business" rule for ham radio. Which is actually an
advantage for hams in that we don't get invaded with business comms
eating up all or bandwidth. Lawsuits over QRM, etc.....

Heheheh ... sure .... <chuckle chuckle>
Um, what makes you think one can't do e-mail with amateur radio?
Of course, there is fast-scan television (regular tv) as well as slow scan tv. Uhhhh ... I sometimes take my HT (walkie talkie) to work to use during lunch. I've chatted with Australia, England, and other parts of the world ... no, not using internet linking - all rf path. This was with 6 double a alkaline batteries on FM (voice). I've had folks argue that one can't cut through one of those alleged 70,000 watt shoot-out stations. Can't fight the carrier. Hmmmm ... only need to be a short way off the carrier. There are modes that can be copied some 30 dB BELOW the noise level. 50 Hz bandwidths and less (another 20 dB gain). Actually, it should be possible to cut throught that 70,000 watt am signal with 100 watts (properly done, of course). Oh .. internet .. yep, can do that too ... but tell me how you work Australia all rf path on 6 double a alkalines ... with a walkie-talkie .... running all of 4 watts .... into a whip ... and that only requires a tech license. What happens if you have your extra?

BWAaaaaHAHAHAHAHA

try again from Rochester, NY
Jim AA2QA

ps although business use is not what amateur radio is all about, what is it that makes me think that business use is not at all on your mind?

OK. And even if he could, that document would
not be a reference for Part 97 requirements. If it was in
any way applicable we'd have heard that a long time ago.

Suffice to say that for amateur regs and S25.5 in particular
there are NO standards specifically identified for morse code
specifications.

That's IMHO.

Exactly, and all those alphabet soup identifiers (PHD, MA, BA, BS, etc.)
mean nothing once you are inside the organization. It may garner
"some" credibility points in an industry forum meeting, symposium
or whatever, but neither I nor any of my people are evaluated on the
degrees or licenses they hold. Heck, when was the last
time anyone gave a damn about your grade-point in college?

> Does that mean that the things I do today don't stand for anything?

The things you do today are pretty much all that counts
in industry. You might get by with a slack year of
accomplishments because you have had a long track
record of being a positive contributor, but that can't and
shouldn't last very long if your current job performance
doesn't meet a satisfactory level.

Cheers,
Bill K2UNK

You're right on the money! I said this long ago. The MURS will be
adopted by the truckers and you can bet your bottom dollar that all 5
MURS frequencies will sound like CB Ch. 19.

Some people post in real-time.
>
> > The main reason hams are so well-behaved on CW is not primarily due to the
> > mode itself.
>
> See above. Extreme emotionalism and real time CW are virtually impossible
> to accomplish at the same time.

"Extreme emotionalism" and bad on-air behavior are not the same thing.

In addition, the "extreme emotionalism" reactions would have to happen
when the person is sending.

Some people manage to behave very badly using voice modes, too.

An interesting hypothesis, Cecil, but it has no basis in fact. The main reason hams are so well-behaved on CW is not primarily due to the mode itself. It's due to the culture and tradition of behavior that is part and parcel of CW operation. That culture and tradition deserves to be preserved. Some of us are busy preserving it by using CW as much as possible, and helping/encouraging others to do so.

Get it right- the extra class exam was not a minimum requirements ham radio exam, it was a rather comprehensive test.

>
> I'm sorry you place so much significance on achieving a passing
> grade on a minimum requirements ham radio exam decades ago.

I'm sorry you're so dense you fail to understand anything about the subject. Particularly that it wasn't the passing of a test that was NOT a minimum requirements test, rather the most extensive test available. Rather than merely "passing a minimal test" it was what was learned and accomplished enroute to that test that matters. I know, today virtually no learning is necessary. Maybe that's why you only recently made it.

> I
> don't consider it much of an accomplishment for myself.

Of course not, your Extra Lite means little to you or anyone else.

> Why should
> I consider it much of an accomplishment for you?

You sure are anxious to spend a lot of your time discussing it, particularly in your repeated assertions that it was a "minimum requirements" test. Could it be that you don't say what you really believe? Surely not!

Not really...it means we can get rid of those that want to order a pizza via the autopatch, those that have no idea at all what ham radio is supposed to be, and maybe we could use some thinning out and getting back to basic. Then maybe the un-informed crabbing about what the 'service' is all about will stop because those that are left will actually have read part 97.

In my area the hardest working hams are the "titleholders". In the case of our SM, KM0D, SEC, N0ZOD, and STM, W0LAW, I know of no hams who contribute more time and energy to the PICON than that trio. We have guys like that to thank for the huge success of Amateur Radio as a force for public good during times like the recovery from recent disastrous floods and tornados in our area.

Part 97 requires a Morse Code test for several of the licenses. Part 97
doesn't say what Morse Code is.

All this talk about MURS, like it has anything to do
with what most people consider amateur radio! Amateur
radio is much more than simply transmitting and
receiving. Heavens!

If I need convenient, reliable communications with
other people, I use a cell phone. Sure, under
extraordinary circumstances, amateur radio may be
more reliable, but 99.9% of the time, I'm
way better off with my cell phone than my ham radio.

With the standards Hans used, MURS even is disavantaged as compared to CB class D (27MHz)! However, for that mode, the only advantage is more latitude on signal content (digital is allowed).

Now that we've established that it's worse than CB, you really need to go back to that dream you call life and tell yourself that everything will be OK, even after the labatomy.

But with 12, one can count by 2' or by 3's.

30 is the lowest "simplist" number, with factors 2, 3, and 5. Counting is then intuitive by 2, 3, 5, 6, 10, and 15. [primes skipped are 7, 11, and 13, any of their multiples, plus 4, 8, 9, and 12.]

That's a load of horseshit that a vulture wouldn't touch. You can't
work what you can't hear, and the only way to find a signal near the
noise floor is to improve your antenna. Even if the "other guy" gets a
linear, you still have limited range because of the crappy propagation
of the band. The only reason people buy linears is because of the
king-of-the-hill mentality that most of us abandoned after grade
school.

> - the fact
>that they interfere with others when the skip is out is simply a
>side-effect. With no skip, there is no incentive to go with
>exceedingly higher power in the first place, because it serves
>virtually no useful purpose on VHF/UHF.

Amps interfere with others, skip or not. Part of the "skip" they
complain about is bleeding from overmodulated radios and crappy amps,
and part of it is the normal increase in the noise floor from local
signals as the band use increases in the daytime hours. Anyone with a
scanner knows the latter is true because the exact same thing happens
with the cordless phone channels. So considering both those problems,
I can just about guarantee you that the same thing is going to happen
on FRS and MURS as it happened on the CB. And they will use the same
lame arguments to justify the use of amps, and for freebanding on
nearby freqs.

>So - you're going to have to come up with a better argument, this one
>just doesn't wash any longer. Thankfully the FCC has figured this
>out... too bad many hams haven't.

The FCC wears blinders to both reality and criticizm. When the abuses
with CB became excessive they ignored the problem and dropped the
license requirement. Their current reasoning for FRS is that they
implemented manufacturing requirements that would prevent abuse, but

they totally ignore the resourcefulness and determination of the pirates, as well as the historically high profits from illegal radio equipment. The existence of any band with little or no enforcement is just asking for trouble, and the abuses will continue until the Commission pulls their heads out of [the sand].

For the most part, there is very little action on any VHF/UHF band
other than 2m.

> MURS -- 2W output
> Tech -- 1500W output
> Advantage Tech 750-to-1

Unless your doing something bizarre, like EME, anything over 5W is
basically overkill. 2W TPO is decent, if you've got a good antenna.

And even 2m has gone dormant in recent years. Other than a few
high-level repeaters, the band is virtually unused.

Most people nowadays go on the Internet when they get home, and can
reliably talk just about anywhere in the world for free.

But, in any event, I'm basically comparing MURS to Amateur Technician
2m... there is now very little difference between the two. Hams have
repeaters, but most of them go unused these days, and any of the good
ones cost you money - so you might as well get a cell phone.

The biggest kicker is that, with ham radio, you can't even talk to
your friends, family members, and co-workers. This is why I've
continued to push for re-opening up the Novice Class as a no-code
VHF/UHF-only license - at least you would have somebody to talk to on
VHF/UHF.

I disagree, for the average Tech with a 2m handheld, a 2.1m hanheld
will compete quite nicely.

Anything over 5W is overkill for anything other than bizarre
applications like EME... 2W is plenty with a couple of good antennas
at each end of the link.

This statement strikes me as rather ignorant of reality.
If you're having fun using MURS, knock yourself out. If
MURS is as good as ham radio for you, that's your thing.
It just doesn't seem to make much sense for most of the
people I know in ham radio.

Yes, Dick; I will gladly tell you that ARRL believes that it must continue to accomplish things on ham radio, every day, and not stop because it has done good things in the past.

Does that help?

Did you really need someone to explain that to you? If so, things must be getting pretty bad for you and I hope you feel better soon.

FOR FREE? If you mean via the computer, there's still the ISP monthly charge
or its equvalent (the DSL line, cable modem, T1, or whatever). Who provides
that for free? If you meant free = "no additional charge", you failed to
account for the hidden monthly charges I just stated. Then, there's the
indirect charges, such as the electric bill (most people pay a power company,
or for gas for their generator, etc....).

Maybe they only go unused when you're around because no one wants to talk to
you, or like the people on this group, they've already "heard it all" from you!

Absolutely. What is wrong with that? Again, do you have some kind of
point? I suppose not... and it seems that is the underlying problem
these days with Amateur Radio - it is basically pointless.

Moonbounce? Have you completely lost all touch with reality? The
fact that is basically all Amateur Radio seems to have to offer on
VHF/UHF for a Technician operator PROOVES how irrelevant ham radio is
becoming

Repeaters, maybe... but moonbounce? Give me a break.

Stewart - N0MHS

P.S. You can already do repeaters on GMRS, and I suspect that MURS
will eventually be expanded to allow low-level repeaters on certain
new frequencies... I'm been pushing the idea of a crossband VHF/UHF
repeater capability, so Joe Average homeowner can set up a repeater
site inexpensively.

Aren't you forgetting the "All above 300GHz," which technically means
that Techs have an infinite amount of bandwidth? (Though building
those 300nm yagis can be a pain in the ass)

Also don't forget the little bonuses like IRLP, other link systems,
and in general, the ease of finding repeaters on 2m and 70cm. Even if
they allow repeaters on MURS, you won't be able to find enough of them
to give reliable comms over more than a couple of miles.

Nope, it just hasn't had time yet. There are still way too many
people out there that aren't familiar with FRS. Once they start
fiddling with it, some of them will start ruining it, and it will be
all downhill from there.

Yup.

There is also the cost factor. It costs far less to do it right the first time rather than have to redo after wind and/or ice.

The 35 foot tower can make quite a mess if it falls. And the cost factor is still considerable. What's a good price for a 35 foot tower, small tribander, masts and fittings, rotor, cables and miscellaneous? The cost of a proper
foundation, the necessary permits and professional review are peanuts compared to the big items.

The fact stands - the only reason that there is a "MURS" is that folks went to the nearest CostCo or BestBuy and bought the JobComm or Color-Dot radios which were intended for small business use WITH A LICENSE and then started using them without benefit of same. This is criminal behavior no better than the ham-band "bootlegger" or the broadcast "pirate".

The Commish'- to my deep disgust - was more interested in getting more economists and phone-company=merger specialists on board - folks who had no concept of what radio regulation was all about or should be - than in putting more law enforcement agents on the streets to clean up the mess, and the rest is history.

Two methods of Rules changes - go through the procedures starting with a Petition for Rulemaking, or just go ahead and do what the law does not allow you to do and if enough people do it the gov'mint will turn chicken and leave you alone.

The second method makes me sick.

<Enough ranting>

On HF, the best approach is to use the same amount of power as the station you're trying to communicate with, and use the best antenna possible. The same hold true on VHF, except that at a certain point, increasing power will do you no good, because the other station is out of LOS.

The point is - Amps are more useful on HF because of beyond LOS propagation - therefore they exist... it really does no good to use amps on VHF - their are of course a number of ways to increase LOS comm range, increasing Tx power is one of the least efficient(and ineffective after a certain point). I've written a web page about the whole deal:

http://www.geocities.com/horseshoe7/repeat.html

So please, do try to feed me a bunch of happy horsecrap about using amps on VHF/UHF - it is VIRTUALLY USELESS. You tried to apply my statement in the wrong context, and got yourself 360 degrees turned around - you tried to argue with me, but just ended up agreeing with me.

So we're to forgive your ignorance of the numerous users of FM at 440
megs and of those who use CW and SSB on 50, 144, 222, 432 and above.

> > MURS -- 2W output

That's preposterous. I have a good antenna and I can't work Minnesota
from here in West Virginia on 144 or 432 with five watts. I can do it
under certain conditions on 432 with 100w. I'll be able to do it
frequently with a KW. Even on 2m FM using repeaters, a 5 watt mobile
signal isn't going to cut it in this hilly terrain unless I'm on top one
of the hills.

> And even 2m has gone dormant in recent years. Other than a few
> high-level repeaters, the band is virtually unused.

Two meters isn't dormant but we seem to have more repeaters than we have
a need for. The band, despite your claims made from limited exposure,

is not "virtually unused".

I think it depends on which lobbyist carries the most cash. A harsh
accusation to be sure, but many of the Commission's decisions in the
past few years are inconsistent with any other method of management.

> your style.

Are you kidding me? I've put out some WHOPPERS over the years on rrap. See below for an example of one: "synthetic ionization of the ionosphere".

But, I do think that the VHF/UHF ham frequencies are being wasted, and we need to reinvoke NOVICE class as a no-code VHF/UHF only license... or, simply expand services like FRS and MURS. 11m CB is a red-herring and has virtually nothing to do with VHF/UHF.

****
Tech advances force FCC to consider Ham HF freq auction:

WASHINGTON (AP) - Spurred by the many recent advancements in the Laser ionization technology field, the ITI Corporation (Ionization Technologies, Inc. - Fairfax, VA) has proven that it is now economically feasible to synthetically ionize specific areas of the ionosphere, opening up new many new reliable and low-cost telecommunications applications.

The best frequencies for utilizing this technology lie in the HF portion of the electromagnetic spectrum. While the HF portion of the frequency spectrum has long since been allocated to specific purposes; there are many HF frequencies which could be re-allocated to better serve the nation. The Federal Communication Commission(FCC) is considering re-allocating at least half of the Amateur Radio Service's current HF frequency spectrum to the newly proposed ISS(Ionization Skip Service), where it can better serve the public's telecommunications needs.

Stewart Robertson, President of ITI, says; "The older naturally-induced HF skip communication techniques essentially waste 99.9% of the HF bandwidth, and communications are generally of very poor quality, very unreliable, and end up causing wide-spread interference. Using the new synthetic ionization techniques, we can specifically direct RF energy over great distances, wherever we want it, anytime we want it. Communications are no longer predicated on solar activity - we can now directly and safely control ionization evels in specific areas of the ionosphere, opening up all kinds of new possibilites in reliable long-range communications applications."

Maybe you are not familiar with the mentality of these idiots. Regarding amps, the most important thing is "swang", referring to needle movement. They start by modifying their radios. The modulation limiter is disabled so they can sound "louder", irrespective of splatter and harmonics. Then they run the output to a Class C driver with the intention of re-modulating the carrier just to get the peak power higher. Then it gets sent to the final amp, which is usually just a box filled with push-pull power transistors and wired in parallel. These amps are not designed for linearity, but for raw power. They are not intended for communication, but for "stepping power". Have you ever attended a "keydown"? It is a contest to see which amp is louder, and intelligibility of the audio is almost irrelevant: Two mobiles are set up on a line, they rev the motors and key away at the same time. The winner is the one that is heard above the other. Forget ERP or linearity, it's nothing more than an RF drag race.

Now we all know that ground-wave propogation on 11m sucks almost as bad as VHF and skip is very inconsistent, which is probably why the hams abandoned it years ago. Just like VHF, 11m has a limit as to how much power is practical, yet amps in excess or 1000 watts are commonly used by IOs.

Not only that, but there is a lot of money to be made by making and selling illegal radio equipment. They already know that some people will be violating the laws on the band, so all they need to do is convince them that what they need is a bigger amp. That's not hard to do, even if a bigger amp provides no practial benefit whatsoever, because they will tap the competitive nature of people: "My amp is bigger than YOUR amp!" It works. Just look at how many illegal amps are for sale on the net.

The point is that they don't care about any sort of practical communication, they are only interested in doing whatever gets their rocks off, to the detriment of anyone else using the band, and they will do so while laughing in the face of the US Government. Unless the FCC decides to police the bands, the same thing will happen on MURS and FRS, because that's the way people are.

I agree with a lot of what you are saying. I just don't think the amplifier issue can be extended to MURS/FRS/GMRS - the fact is, we just aren't seeing it happening.

If I see this kind of nonsense on MURS, I'll DF the fool, and turn 'em in.

Now, I'll have to admit, I live in San Diego, and what I have seen are some Mexicans running over-amplified setups on 154.600, but I'm not going to go down to Mexico with DF-equipment - the TJ cops would just end up busting me down there.

Not here - 2m is highly used both for voice and for data (packet)
and 440 MHz is not far behind.

The metro area is not one of the country's mega-centers but we do
have lots of active hams.

How can it be any different? It is for the same reason that a Harvard or MIT graduate will be more sought after and receive a much higher starting salary than, say, a graduate from Milton university in northern Wisconsin, which typically accepts the lower 25% of a high school graduating class, just for the money. Now, the 5 wpm Extra may be a great ham and all that but first impressions are based upon what you know about a person. If all people know is that a person needed to do to become an extra is to pass a laughable 5 wpm code test, (why even bother?) then right off the bat he/she is not a coded ham, therefore he/she must be something less than a coded ham who had to meet a much higher standard. This, Brian, is a matter of public knowledge. Deal with it.

The FRS freqs in our area are not overly busy, but what is heard on them is
a precursor of what is to come. Cussing, arguing, name-calling, et al are
already happening. It will only grow worse and MURS will soon follow suit.
To believe otherwise is foolish and myopic.

Ed, when will the ARRL start insisting on excellence rather than the current

dumbing down of the test structure? Sorry for the direct question but I do not

want to beat around the bush. ARRL may have done some good but they have
done irreparable damage to the culture of ham radio. For every one
good operator they have attracted, mostly on VHF, they have attracted 10
qwarmers on HF that are dragging HF to the ground...but then again, ARRL
seems to prefer the VHF/UHF + frequencies anyway.

It's been around for quite a long time(1996?) - pretty much EVERYONE has one
of these little radios now - there aren't folks with amplifiers abusing
these frequencies. If it hasn't happened by now - it NEVER is gonna happen.

The argument was that people would use AMPLIFIERS on FRS and MURS - this is
absolutely wrong... you KNOW IT, and are trying to CHANGE THE SUBJECT.

Amplifiers are not being used on FRS, GMRS or MURS.

Tell me why 'Joe Average' would even think about setting up
a repeater, or cross banding VHF/UHF. Seems like a very silly
idea to me. Would that repeater system be private, or public
for a fee perhaps?
MURS could fill a need, but please don't tout it as a viable
replacement for amateur radio, it isn't and will never be such.
'Doc

PS - Posting to multiple groups is as moronic as the other idea.

BS, Dick. The extra class exam is a minimum requirements exam for obtaining an extra class license. Why is that concept so hard for you to understand? All ham exams are minimum requirements exams. Anyone who meets those minimum requirements gets the appropriate license. Assuming that they both pass the exam, under-qualified individuals receive exactly the same license as over-qualified individuals. It's like a GED. Anyone who scores at least a 450 average gets a GED. That includes people who score an average of 650 or higher.

> I'm sorry you're so dense you fail to understand anything about the subject.
> Particularly that it wasn't the passing of a test that was NOT a minimum
> requirements test, rather the most extensive test available.

Just because it is the most extensive amateur radio exam doesn't save it from being a minimum requirements exam for the extra class license. You are just going to have to find a better way to prop up your sagging self esteem. It's what you have done and are doing *after* you get the license that may be worthy of respect. Simply barely passing a minimum requirements extra exam is hardly any accomplishment at all.

Does anybody know first hand if truckers are presently or going to use MURS
or FRS?

Are you CB/Hamster dealers persuing this avenue and presenting it to
truckers?

If there's more than just a handfull of same company truckers using it, I
would also use it.

Personally, I've always liked the idea of a few fm channels in the VHF/UHF
regions just for truckers.

If there's a migration to MURS by truckers in general, it will be to escape
the present CH19 blatherings of hi power idiots and base stations whose sole
function in life is to cause interference just for the sake of it. I agree
that if it becomes more than a fad, the MURS ch.'s will most likely end up
sounding like the present CB 19 but it should be a long while before that
happens.

Dick doesn't seem to understand the concept of minimum requirements. A certain minimum score must be attained. Everyone who attains that minimum score obtains credit for passing the exam. Any score above the minimum passing score is irrelevant in obtaining credit for the exam. The person who barely passes gets the same credit as the person who aces the exam. That's what minimum requirements are all about.

Please pay attention, Dick. Ed is saying that what happens today won't much matter if nothing else happens in the future. One cannot rest on one's laurels and coast through the rest of one's life without falling behind. The exception might be, "once famous, always famous", but I don't recall you being famous.

How long do you think Ed's job at the ARRL would last if he shared your attitude of, "I have arrived and now I can rest on my laurels"?

> an extra class license.

Yep, the Extra test you took is a real no-brainer, and that would help explain why you waited so long to take one. You can't know that it was not at all the same in earlier years, of course. Nothing we can do about that now except to correct your misapprehensions and false statements.

YOU don't see it happening...Cuz your dimwit MURS radio has a range of
about a mile or two.

I already know of abuses occuring in the Atlanta area. Big ones. And I
am hearing truckers on 151.820 and .880 from my home in Winchester, TN...they
are on Interstate 24. I'll let you take a look at a topo map and tell me WHY I
know those guys are running more than 2 watts.

To be (more) specific, my home is about 510 meters west of the Winchester
(BGF) airport. Now look at the closest approach to I-24.

Are you going to try an convicne me that those guys are running "legal"
MURS radios...?!?!

No matter what you post, no matter your arguments, the simple unalterable fact remains that the low life
CBers will soon ruin the MURS frequencies. Common sense and reality will , despite the claims of the self-professed intelligentia, eventually rule.
I tend to scoff at those who claim to hold themselves aloof from us commoners. These self-proclaimed phonies most usually live in a fantasy world bordered by fantasy and Harry Potter books.
You Muggles are all the same.

Amplifiers on VHF and up would be an excellent way of ensuring that your
station is the one that gets through congestion.

More than a few watts is generally necessary to extend that radio-horizon LOS
to hundreds of miles using various scatter modes.

Let us know what the Commission does with it. It took them over two years to go after a few companies selling illegal long-range cordless phones that were interfering with aeronautical communications.

Roger, you have been told before. You have me cofused with someone
in your past. Of course, this will not stop your psycho-babbling. Your
posts are psychological projection and wishful thinking. I am sorry you
live such a miserable life, but your random attacks on successful people
will do nothing to help you with your mental problems.

I actually did work at a pizza delivery job when I was in graduate
school, and the company paid a portion of my tuition. I am not married
Roger. I have a lady friend who is employed as an actress by one of the
major film industries in Hollywood. I am sorry this angers you, but your
rage is misplaced. At 50 years old, you really need to take a look at
your life Roger. You are the laughing stock of Usenet and ham radio, and
I bet in your community too.

"stewart" <horseshoe7@yahoo.com> wrote

> But, in any event, I'm basically comparing MURS to Amateur Technician

Not even close to being comparable. Amateur Technician has incredible
advantages over MURS. (By the way, there is no Technician license limited
to just 2M, so don't try to drag out that red-herring.)

MURS -- 5 specific frequencies, less than 100 Kilohertz of total bandwidth.
Tech -- Millions of frequencies 23,962,000 Kilohertz of total bandwidth.
Advantage Tech 239,620-to-1

MURS -- One band
Tech -- Seventeen bands
Advantage Tech 17-to-1

MURS -- 2W output
Tech -- 1500W output
Advantage Tech 750-to-1

MURS -- Antenna height 20'
Tech -- No antenna height restriction.
Advantage -- Tech

MURS -- FCC certificated radios only. Modifications illegal.
Tech -- Free to use any purchased, homebrewed, or modified radio without FCC
certification.
Advantage -- Tech

MURS -- Operation restricted by US borders.
Tech -- Reciprocal operating agreements with nations all around the globe.
Advantage -- Tech

I could go on and on, but I'm sure you're getting the picture!

Comparing MURS to even the lowest privileged Amateur Radio license is like
comparing a tricycle to a Lamborghini, and the comparison suffers even worse
when you compare MURS to a General or Extra class Amateur Radio license.

I love it when you talk LOUD to try to overcome your lack of rational
persuasion.

Speaking of loud, in the case of MURS (with only 5 channels) the old notion
of 'capture effect' will ensure that I can get through all the other weak
signals on channel. 'Capture effect' is done with power.

Can you say "amplifier"?

I knew you could!

I've got a whiz-bang dual bander in my car with enough memory slots to plug in -every- 2m frequency pair and simplex frequencies. And they are programmed in. Then I have a handheld scanner with the same frequencies programmed in. At home I have another scanner with the "popular" repeater and simplex frequencies programmed in.

With all that said, there is very little 2M FM activity in the central Ohio area. Compared to Omaha NE is the mid-late 80's, its dead.

That's not a long time at all.

>- pretty much EVERYONE has one
>of these little radios now

Not true. Most of the people I know have no idea GMRS, MURS or
FRS even exist. The only people I know who have any of them are
a childcare center that uses FRS handhelds as a wireless intercom
and a married couple that used FRS handhelds for car caravaning
until they got better cellphone plans.

>- there aren't folks with amplifiers abusing
>these frequencies.

Not yet. cb was well behaved the first couple of years, too.

There may not be any abusers in the area your radios can reach, but
can you speak for the entire country? I think not.

> If it hasn't happened by now - it NEVER is gonna happen.

That's utter nonsense. cb was well behaved the first couple of years, too.
Then people began to discover that they could break the rules and get
away with it. Before long, breaking the rules became the norm. And this was
in a licensed radio service, with callsigns and everything.

Perhaps FRS, MURS and GMRS will stay well behaved in the long term.
Perhaps they won't.

Building or converting amplifiers for MURS is duck soup. There are plenty of amateur and commercial service amplifiers out there that will do the job. Existing designs can be easily copied, too.

Hams should be concerned because MURS and GMRS abuse can result in unreasonably restrictive rules on amateurs, just the way CB abuse resulted in unreasonably restrictive rules on amateurs on HF. Did those 1978 rules end illegal cb amplifiers? Nope.

There must be a lot of people in the world who care how fast certain people can read code. Otherwise there would be no code tests. When you obtained your license, didn't the FCC care how fast you as an applicant could read code? Whether or not you care how fast you now can read code is not relevant to the discussion although one could easily assume that you do not care how fast you now can read code, even if you hadn't stated it, correct? If so, then there is no need to re-state it.

The ARRL was the last hold out for you're beloved multiple code exams and excessive license classes. The ARRL has instituted courses that can earn continueing education credits. Milton might even accept them.

Sorry for the direct question but I do not
>
> want to beat around the bush. ARRL may have done some good but they have
> done irreparable damage to the culture of ham radio.

Only by dragging their feet on eliminating the code requirement, and by not having a vision for the future of amateur radio. I think the ARRL more as an Amateur Radio Historical Society.

For every one
> good operator they have attracted, mostly on VHF, they have attracted 10
> qwarmers

"Qwarmers?" What's dat?

> on HF that are dragging HF to the ground...but then again, ARRL
> seems to prefer the VHF/UHF + frequencies anyway.

Huh? Go look at all the frequencies that the ARRL/W1AW broadcasts your beloved code practice sessions on. Report back the ratio of HF to VHF+ freqs.

> you waited so long to take one.

I took my first ham exam in 1951. Ham exams have always been of the set of minimum requirement exams. A spelling bee exam is an example of a maximum requirement exam where there is one and only one winner. You obviously don't comprehend the meaning of a "minimum requirements" exam. The difficulty of the exams may have changed over time but at the time they were offered, they have always been minimum requirement exams. Everyone who barely squeaked by with a minimum grade got the same amount of credit for the exam that you and I did.

Did you get extra credit for knowing more than was on your exams? If not, all you can say is that you met the minimum requirements for the exam just like all the rest of us. You are really going to have to find a better way of obtaining your self esteem than dwelling on some minimum requirements exam that you passed decades ago. That's certainly not worthy of more than a minuscule amount of respect from others.

Steve, you tell us how far you are from an airport, but your point should have been how far you are from I-24. Unless the airport is closed and they're using it for a truck driver school and testing center like the old Chanute AFB.

When I get back to work I'll bring up the DRG for your location. Since I don't have "image analyst" I won't be able to do a visibility function on the vector from your location to I-24, but I'm skilled enough at reading the height contours to. Oh yeh, what is the height of your antenna? What is the gain at the back of the radio.

I assume that you are claiming that intervening terrain would block a 150mhz signal at 5 watts over a distance of 1/3 mile? If not, please clarify.

Yes, they cared (past tense) about my code speed back in 1952 but that was
50 years ago. My statement was in present tense and is a true statement. I
haven't been code tested in the past 50 years. Therefore: "*Nobody* cares
(present tense) how fast I can read code, not even I." My code speed is
completely irrelevant to me and virtually everyone else in the universe.
Does anyone care that I can ride a bicycle?

Relevance???? I have a ham license, I am working on a 2.4ghz antenna, and a 160m antenna. I will look at and try if possible any new technology on one end and restore/use BA gear on the other. I love telecommunications. My ham ticket is relevant to me because I am an experimenter and an operator. I use 802.11b for home networking, just another technology. MURS is interesting. Do I see it as a threat to HR? No....Cynics who want to prophesize the demise of HR are the real threat. Do something, contribute to the science of radio, teach others.

If the AR service is irrelevant to you......quit.

Like Bob Dole, as he exited public life, sponsored a bill allowing 100% of
the radio/tv media in any metropolitan area to be owned by one person.

Why would he do that?

I'm just trying to determine how much more (or less) valuable your code is over my code. I mean, if there's a pecking order and all, and it hinges around code. Because the written exams are harder now than ever before and I've passed them, so I've got rank on you there.

Horseshoe, you're going to have to help us here.

We need you to explain the difference between useful ERP and "virtually useless' ERP.

On one hand you say higher ERP is VIRTUALLY USELESS ---

> So please, do try to feed me a bunch of happy horsecrap about using amps on
> VHF/UHF - it is VIRTUALLY USELESS.

But on another hand you applaud the lifting of ERP limits ---

> This effectively raises the ERP limit to about 10W for omni base
> stations, and about 50W with a directional beam antenna.

Which kind of ERP is useful?

I can imagine ol' Billy Bob buying hisself a 14dB gain antenna, string some lowloss coax, and exclaiming "Sheeeett, ah'm putting me an ERP of 50W over toward ol' Ellie Mae's house!."

Then I can imagine Ellie Mae hollerin' back "Yeah, but I called 1-800-HAM-AMPS and got me one of them thar Mirage B-320G bricks, and ah'm puttin' me an ERP of 200W in every durn direction! That be making me about 6dB louder'n ya'll in every direction!"

Well, ol' Billy Bob's mammy din't raise no idjits. He slaps hisself on the forehaid and esclaims "Ah'll jess get me one of them thar bricks too -- lessee, my antenna done gave me 14dB, and that thar brick of Ellie Mae's is givin' 20dB -- that be 'bout 34dB -- holy sheeeeeeeitt, my ERP done be 'bout 5,000W -- hell's bell's -- I ***OWN*** them thar MURS channels fer a hunnert miles around old Mount Baldy!"

With all due respect, do not ask me how much more valuable my code is over your code. Do not ask me how much more valuable a college degree is over a high school diploma. For social lifeforms such as humans, wolves, bees, ants and even chickens, Life itself is one big pecking order. KR4AJ has nothing to do with it. It is simply a fact that one must accept. If you obtain a certification as a dog catcher under a reduced set of standards compared to that of another dog catcher's certification, you will not be held under the same degree of esteem as the dog catcher certified under the higher standard. Who cares? Perhaps the person who hires the dog catcher cares. Perhaps the National Dog Catcher Society cares. Perhaps fellow dog catchers think the one certified to the higher standard cares more about dog catching and will always strive to catch more dogs, more efficiently. I don't know Brian, that's the way Life is. Don't shoot the messenger. It's something you cannot change. Unfortunately, in our case, there is no option for new hams to be certified to the older, higher standard because we hams complained to the hilt and took that option away.

Do you think it is good to remove options to be certified under a higher standard of excellence, Brian, just because it is perceived as being unfair to the less talented?

As far as the written portion is concerned, don't even bother with that. Any test in which the questions and answers are available in advance is not a test at all. The only challenging portion of the amateur radio test was the code test. But you know that already.

Message-ID: <f7d9a152.0205250901.4589a9df@posting.google.com>
Source record: 43561

From the reviews in eham.net, I have had the impression there are two different people named Wayne Green in charge of _73_ magazine. Some say he is a kook while others say he is an iconoclast with fresh new ideas.

I have had the opportunity to read a few of Wayne Green's columns in his _73_ magazine. I was right. There are two different Wayne Greens running the magazine. The cutting-edge Wayne Green (the side I like) has complained about the fact that the ARRL hasn't done enough to bring ham radio into the mainstream and out of obscurity. (I can relate to this. For most of my life, I was unaware of ham radio.) This is the same side of Wayne Green who has complained about the bureaucratic nature of the educational system and the students who endure it. (I can relate to this, too. I'm still trying to recover.)

The kooky Wayne Green, however, thinks that the government faked the moon landing and is hiding aliens. This is the same kook who sells advertisements to psychics and "miracle" medical quacks.

I want to see the good Wayne Green who attacks the issues. I want the kooky conspiracy theorist to be abducted by aliens.

Interesting, Phil. I thought the general consensus was that the FCC does NOT "reward" illegal behavior by legalizing it.

>Two methods of Rules changes - go through the procedures starting
> with a Petition for Rulemaking,

You mean kind of like RM-9807? Then the above statement no longer applies.

>or just go ahead and do what the law
> does not allow you to do and if enough people do it the gov'mint will
> turn chicken and leave you alone.

"CQ, CQ, CQ 11 meters."

>The second method makes me sick.

The first method's been tried...and proven unreliable.

><Enough ranting>

Agreed. Take care and 73.

I got my mail-order Conditional in 1952 after rote memorizing the ARRL
License Manual. I obtained all amateur frequency/power privileges at
that time. I regained all amateur frequency/power privileges in 2000
when I passed the Extra exam. In my life, there was no effective
difference between the Conditional class license and the Extra class
license. There was nothing I wanted to do with a Conditional license
in the 50's that I couldn't do. Virtually all of the value of a ham
license is in the privileges granted. That you view amateur radio exams
as some sort of "King-of-the-Mountain" game is of no consequence to anyone
except you and the small minority of hams like you who don't realize that
your's is actually a "King-of-the-Molehill" delusionary diversion from
the real world of amateur radio. It is the, "When I was young, I had to
walk to school in snowstorms", mentality at work. My Dad rode a mule
to school. So what?

Messenger? You guys aren't the messengers. You're trying to be the
enforcers of a false system of values.

> It's something you cannot change.

I think I've already been part of making the change. The actuarial tables
will have to take care of the rest.

> Unfortunately, in our case, there is no option for new
> hams to be certified to the older, higher standard because we hams
> complained to the hilt and took that option away.

You measure a ham by the exam he took. A better system would be to measure
a ham by what he does. But why measure at all?

> Do you think it is good to remove options to be certified under a higher
> standard of excellence, Brian, just because it is perceived as being
> unfair to the less talented?

Ah, finally a question. The exam needs to test what is necessary to equip
and operate a station within the confines of the authorization, and to do so
safely. Anything else is irrelevant and superflous.

> As far as the written portion is concerned, don't even bother with that.
> Any test in which the questions and answers are available in advance is
> not a test at all. The only challenging portion of the amateur radio
> test was the code test. But you know that already.
>

So the code test IS more valuable than the rest of amateur radio combined,
in your opinion.

>>qwarmers
>>
>
> "Qwarmers?" What's dat?

A type of radio pest whose species has multiplied many times over since
the introduction of the 5 wpm General amateur license. This QRMing
creature has no known natural enemies because it refuses to use a call
sign to identify himself. They are known to frequent the voice portions
of HF frequencies, particularly in the 20m and 75 meter bands. They are
indistinguishable from problem 11 meter operators. They are usually not
found on the code portions of the bands possibly because they are not
capable of receiving 13 wpm code transmissions.

I don't need to. The ratio is probably close to zero. Would you expect ARRL

to have a presence in all major cities so that they could "broadcast" code practice

via

line-of sight communication?

Come on Brian, when you studied for your license, surely you memorized
the part about skywave propagation?

Whether we care or not onviously does not not matter to you. The fact
that it matters to many pther people who know nothing else about what a
great ham you are, Brian, may or may not matter to you. But all I'm
saying is that certification to a higher standard matters to people in
general. That is Life.

I object to that statement. My role in Life is not to enforce any system of values. I merely observe, and I am reporting to you what I observe. You may disagree that what I observe is really true but that is another discussion. But what do you observe, Brian? That people never observe a pecking order or that survival of the fittest is not a characteristic of humanity? Go ahead, take a shot at it, explain to us your New Wave approach to interpreting Humanity in general.

>
>
>>It's something you cannot change.

Brian, the part about the actuarial tables is not a very nice thing to say. The Amateur operator is supposed to be friendly and not darken the face of Amateur radio. Part 97 doesn't say that..but you know it is true. I am ashamed to be associated with a ham who writes like this.

>

And you measure a ham by his statistical probability on an actuarial table. Nice guy.

>But why measure at all?

What? You want no test at all? Just give everybody a ham license?

>
> So the code test IS more valuable than the rest of amateur radio combined,
> in your opinion.

...putting words in my mouth...No, but it is probably more valuable than
the written test at filtering out effort and commitment to amateur radio.

Now a question for you:

Do you value a person's probability statistic on an actuarial table to
be more valuable than the rest of amateur radio combined?

Judging from the poor English used by some of the older Extras,
amateur radio *never* required a very good education.

>kooky conspiracy theorist to be abducted by aliens.

If they (aliens) do take him, you'd lose both. Wayne DID have some good ideas...back around 1978.

He could talk up a storm, but then do absolutely nothing about it. He ran the life out of "73" magazine until it was bought out and some new money (and editorial responsibility) was infused.

Along the way he managed to some little personal credit, to get back into the sadle with his tirades and meandering "editorials". he now uses "73" as his personal footstool for meaningless rants. Wayne's "Never Say Die" editorials were the "rrap" of his day.

His big thing is to suggest "someone" could do all these great things for Ham Radio, perhaps even supplanting the ARRL. HE might have done it at one time, but never did.

Wayne Green is Amateur radio's infamous "also ran".

I agree; certainly very few if any Federal codes deal with effort and commitment but the topic Brian introduced was about intrinsic value, not Part 97.

>

Actually, believe it or not, I actually put the extra lines there for clarity due to the number of imbedded articles. If that is a problem for people not running the window maximized, I can eliminate the extra spaces.

Wayne Green died during the abortive attempt to take over the ARRL back in 1963. His "Institute of Amateur Radio" was actually a front organization for the American CBer in drag club... Now defunct due to lack of interest.

The shell that runs around Dayton talking to K1MAN is really a bio-robot. He designed it in his heyday of Byte commando.

Of course, Ed. I found it interesting that amateurs could actually do
moonbounce on 24 GHz with the water vapor loss running only 85 watts.
Obviously, slow data rates are necessary, but that beats no data at all!

Stewart, you seem to think there isn't a point. The point is about learning. This served the United States very well back in 1968 (I believe it was 1968 - within a year). The Coast Guard lost a big tower on Saipan (did I get this right this time, Hans?). The Navy was having a big problem copying the hams they sent over to get communications back up (the disaster was caused by a typhoon). I was in the shack at KG6AAY on NavCommSta Guam and heard the goings on. I called the signs 'sparkplug, sparkplug1, this is KG6AAY standing by'. The net result was that the AMATEUR RADIO OPERATORS restored communications. For a number of days, we were the ONLY communications to that island. Hans was one of the guys that went over to Saipan. This has happened countless times, you simply may not have heard about it. One does not learn simply by talking on the radio. The hobby is much richer than you can ever imagine (and far bigger than I know about as well). It is a valuable resource to this country whether you or I believe it or not.

Let me refresh your memory. The discussion was about noise caused from
skip, to which you responded:

"...not all DX is reciprocal inkind or magnitude."

Now what does that mean if not saying that the -reciprocity- of skip
is a factor in band noise? I'm sure most will agree that skip causes
noise, but how does one-way skip affect the noise level differently
than two-way skip? That's what you said, Randy, like it or not. Now
quit avoiding the question and answer it.

Dang, Dan, where ya been for so long? I've been trying to put in such clear yet precise terms for years, and here you come and just lay it out in terms that even Brian can understand! Good job!

It means what it says Aaron/Sparky. How fucking dense are you? It has
nothing to do with causing more or less interference with regard to
reciprocity.

No, I don't even know how you picked that out of this.

> I do have a suggestion; if you put it up in your office, put it where your boss
> won't see it. :-)

I'm kind of surprised, Ed! I put great stock in what has gone before. We
can't stay there, but what happened before provides the foundation for
where we are going.

But Dick is right. If all there is is now, and if what has passed is
not worth anything, then the march of time makes all useless. Why even
watch the news.

The local ham club kicked him out? Why, he's been insisting that in RL
he's a very different person.

Guess he's been lying about that too.

Nope, I could copy 9wpm error free. I could not copy 13wpm at 70%. I was
proficient at one speed, a failure at another.

I am a nice guy. But I have my faults. One of them is to accept newcomers to the service without judging them by the code exam they took, or what university they took it at.

> >But why measure at all?
>
> What? You want no test at all? Just give everybody a ham license?

You have such a limited mind. Try one exam, one license.

> >>Do you think it is good to remove options to be certified under a higher

> the written test at filtering out effort and commitment to amateur radio.

Part 97 doesn't ask for effort nor commitment. You don't even have to raise your right hand and swear allegiance to America in order to have a license.

> Now a question for you:
>
> Do you value a person's probability statistic on an actuarial table to
> be more valuable than the rest of amateur radio combined?

It will eventually get rid of people like me and you who remember that there used to be layers of useless licensing requirements. Only then will we consider the measure of a good ham by what de does and how he does it (rather than by how fast he beeps).

With an i-Link they could broadcast on 145.00 MHz in Moscow. Sheesh. Let's
use our brain a little.

> Come on Brian, when you studied for your license, surely you memorized
> the part about skywave propagation?
>
> de KR4AJ

Nope, I dropped some acid and actually became part of the ionosphere - for a
moment. I did memorize the existing band edgedes at the time. Today I use
a cheat sheet. Can't wait to add 5MHz to it.

>Then you are NOT using "FRS" radios, nor are they approved for MURS if
>theya re over 2 watts.

Do you mean that the very fellow who got on here and swore on a stack that no one using MURS would ever break a rule is breaking a rule? Who woulda' figured.

Now, I went looking for a newsgroup for this service that he alleged is "better than amateur" and couldn't find one.

It must not be very popular.

I don't think 2 meters is dormant in his part of the country at all. He wants to say that it is because he thinks that he can trick all the hams into operating on MURS.

I agree wholeheartedly, btw; I find QRSS and long-term intergration techniques to be very interesting. I expect to have a DSP-10 up and running fairly soon and will transvert it to HF. I want to see what can be done with QRP that would make a QRPer tremble! :-)

> was doomed for failure from the outset. The MURS frequencies will meet the
> same fate.

Maybe or maybe not. The Ham Fox hunters will have a field day tracking down the bozos, on VHF it is much harder to hide one's activities and location. The real concern is not the running of power, but the fact that the idiots who do the above will find it almost irresistible to dial their modified 2m rigs down to the Ham 2m band to take advantage of the nation wide system of repeaters, some linked in to multistate coverage systems, for a quick QSO with other like minded pirate operators. The reason they would even consider dropping down to the 2m Ham band is due to the fact that many businesses still use the now unlicensed MURS frequencies, and likely will continue to do so. This could make the current problem with intruders on 10m and 12m look small.

Tell that to Mirage amps, RF Concepts, Beko Elektronik,etc. They do a tidy amount of business selling V/UHF amps, and they DO make a difference on those bands with or without skip conditions. You'll be hard pressed to find a serious V/UHF operator that does not own an amplifier. I own and use several myself.

No they don't Randy. They do make dual band 2m, 70cm FM only amps, and only two models at that. The BD-35, which I use for my dual band HT, and the higher power version the BD-38-G. Both amps are for FM use only, and the output drops off real fast outside of the Ham Bands they are tuned to operate on.

You wanted to measure an amateur. I'm saying the license class isn't a good
measure - you should look for other indicators.

Yet I hear you say that the only way YOU can know if the ham has given the
proper effort and commitment is by the level and date of his license.

Exactly right, Jim. That sort of thing is still going on. Consider the following,
which happened 10 days ago:

(from ARRL website)>

"New Mexico amateurs called in to help following air crash: John Strain, K0HGW, and his brother Larry, N7DF, of La Luz, New Mexico, were called in May 15 by the Burro Flats Volunteer Fire Department to assist in search and recovery efforts after a German Air Force Tornado fighter plane crashed in the mountains near Alamogordo. They used a DeLorme topographic computer map to chart the GPS coordinates of the search and rescue crews and coordinated Air Force, county sheriff and news media personnel. US Forest Service crews who were called in to fight the forest fire that developed were monitored on multiple scanners. Communications were relayed through the sheriff's dispatch office, since many on-site units could not reach their repeater stations from the canyon floor. Early on the morning of May 16, the welcome news was relayed that one crew member had been located and was being transported out with relatively minor injuries. Firefighters reaching the wreckage at daybreak discovered that the other crewman had failed to eject in time, however. During the following day, N7DF remained at the US Air Force Incident Command Post and helped pinpoint the major crash features with his portable computer and GPS. Maps were printed out and provided to the US and German Air Force for documenting the incident. Meanwhile K0HGW manned the Burro Flats Firehouse and provided support for the Forest Service firefighters. John Strain continued providing support into the weekend until the final crash recovery operations were assumed by the US Air

Force."

Note that the local fire company, the US Forest service, and both the US and German Air Forces worked with amateurs to effect the search and rescue.

So in this case a neutral observer may conclude that your certification
to operate on the code portions of the band is based on a faulty
standard because it allow you to operate where you are incapable of
communicating. Perhaps it would be better for you to only operate in the
voice or the old novice code portions. Certainly, you should not be
given privileges in any sub-bands where you cannot understand anyone,
correct? What if there is an emergency?

By all means, *yes*, do *not* shoot the messenger. KR4AJ is only trying
to help you by providing you with information that is extremely relevant
for living Life in general and the Life of a ham in particular but you
know that already as this is all a matter of public knowledge. What I
see has the impeccable credentials of Conventional Wisdom, you know,
"CW". Readers Digest is my infallible source. And one time Readers
Digest had an article about Morse Code saving a ham's life during a
snowstorm in Montana. That ham could have been N0IMD!

>>
>
> Part 97 doesn't ask for effort nor commitment.

Nor does an aviator's or a surgeon's license. Just because something
isn't legally mandated does not mean we should not insist on excellence
using the only tools we have available, i.e the CFR's (Codes of Federal
Regulation). Is it against the Constitution to emphasize effort and
commitment by structuring minimum standards as such? Prove it. Take it
to court.

You don't even have to raise
> your right hand and swear allegiance to America in order to have a license.

Is this supposed to be logically connected to something else you have
written? Forgive me but I am getting into my statistically disadvantaged
years, you know, according to that Actuarial chart you mentioned, so
please enlighten me if you will how this comment is relevant to anything
in this thread. But noe that you bring it upI will note that Part 97
does require US citizenship, and Naturalized US citizenship does require
the Oath that you mentioned, so, it might be said that swearing
allegiance actually is a prerequisite to a ham license, at least for
some people.

Ouch again!!! Speak for yourself! Truly a grave topic. Let's talk about

something else like Eastern Carolina Barbecue or something on that general

plane.

About 10 years ago a hurricane "Hugo" IIRC trashed the Virgin Islands.
Law and order broke down there. Phones were out. A few hams with
emergency power and HF stations told hams on the mainland USA
of the trouble. The national guard IIRC arrived by plane and restored
order and did the other things one needs to do to clean up hurricane
damage. So emergency traffic via HF does happen.

Yep. A true minimal exam, the novice. Of course you memorized everything and learned not a thing, too.

> Ham exams have always been of the set of minimum
> requirement exams.

Funny why there were so many different levels of "minimum" though, isn't it?

> A spelling bee exam is an example of a maximum requirement
> exam where there is one and only one winner.

So you think the winner can spell any word then? Don't think so.

> You obviously don't comprehend the
> meaning of a "minimum requirements" exam.

You need to be worrying about your miscomprehensions, not mine. I know what I'm dealing with.

Why are you so hung up on who respects what or who? No one here is worried about it but you and The Gadfly. My concern is for the crumbling of the ARS that has gone on for so long. I know, you were too busy with the "one hit $shit" and Scotch to notice. Brian was too busy bitching about the requirements.

I'll ship you all the boat anchors you want - at YOUR EXPENSE... just
make a deposit via Paypal for everything you want :)

Let's start with a couple of old, and very large, MOCOM-70s that I
converted to run digital on 50.14 in the early 90's, OK? The relays
are still good on the beasts. However, you should be aware that they
DO have a propensity to set car alarms off when they are in need of a
tuneup. I'll throw in the service manual if you buy both. Shipping
and Handling charge for each radio - $50.

Stewart - N0MHS

P.S. I hope you have a good Service Monitor - you are going to need
it.

That is true. The measureable value would be in terms of privileges granted.

That you view amateur radio exams
> as some sort of "King-of-the-Mountain" game is of no consequence to anyone
> except you and the small minority of hams like you who don't realize that
> your's is actually a "King-of-the-Molehill" delusionary diversion from
> the real world of amateur radio.

But by your own words, those with more privileges have a certification with more value. This plays quite well into your king of the mountain analogy, does it not? Those with more privileges are the "kings" and those with the least privileges are the serfs. Whether the kingdom is on a mountain or a molehill depends upon the value that one assigns to privileges. If one grossly overstates the value of the privileges, then one is delusionary. I will note that you happen to be talking to me and how I personally ascertain this value and you are quite wrong. In fact, it is you, not I, who have gone all the way to Extra. I am quite happy with Advanced. If anyone is delusionary, which I do not believe i really true, would it not be you, who was driven to become Extra, while I am quite happy with my smaller mountain, or molehill, whatever you may call it depending on one's perception of Amateur radio's value?

It is the, "When I was young, I had to
> walk to school in snowstorms", mentality at work.

It's more like, 'when I was young I had to know how to design a transistor circuit that did not work only in the saturation region'.

Believe it or not, transistors still do work in analog circuits not operating in the saturation region. My dad never rode a mule but did some work with tubes. So what? HF Ham radio is full of analog circuits and tubes. Physics hasn't changed much from the time I was young until today. Analog design and tubes are still very relevant to amateur radio today and so is Morse code. You cannot say the Morse code is not being used heavily today, can you?

And that very usage must be a signicant indicator that it still has value.

My Dad rode a mule
> to school. So what?

I agree, so what. Mules probably are not very relevant to today's modes of transportation.

Where do you come up with such NONSENSE - don't you have any concept
of reality?

Unless used in conjunction with towers, 100W amps are virtually
useless to Joe Average on VHF... and don't start with the tropo
ducting, Sporadic-E, and EME crap... try to use your BRAIN, man.

This is why amps are not going to be used on VHF MURS and have never
been used on UHF GMRS/FRS - when are you folks going to tune into
reality, and quit trying to extrapolate your HATE and knowledge of 11m
CB to VHF/UHF services - it is PLAIN IGNORANCE I tell you.

Ah Larry,

Do you mean those annoying teleautowriters that would buzz and beep after each weather observation was posted from the weather facility? I was a control tower operator for the Air Force. I thought those memories were dead...that's going back three decades for me. Damn man! Anyway we used to turn the buzzer over so we wouldn't have to keep hitting the silencer. Then it became an Article 15 offense to do so. I hated those things. And Article 15's too...never received one mind you in the 20 years I was in.

Stewart, let's cut the nonsense and I'll ask a serious question - why do you seem to believe that amateur radio stopped with spark gap in the early 1900's? I've got news for you - the latest and greatest in cb could be cut to ribbons with amateur technology in the 60s - I know, I was there. What is it that you do not understand? My 440 MHz handheld runs only 6 aa alkaline batteries, yet is capable of using (not just opening, USING) repeaters 100 miles away. I've talked with guys on handhelds up in Watertown, NY - a good long ways from here - on the handheld. And this is old technology! You'd best brush up on PSK-31 and other modes before you continue to insert your foot in your mouth. Boat anchors exist everywhere. Get back on subject. Just exactly where do you think that anything without a license (including CB) has more to offer than something with a license? Please be specific.

Thanks & 73 from Rochester, NY
Jim

ps - I talked with Norm, VK2NP, in Brisbane, Australia, many many times using RTTY. Yep, old technology. Did it in the 60s. Go ahead and tell me how fantastic the internet is. I used to type 90 wpm on a 100 wpm machine in the navy and could keep the old 60 wpm machine in the shack going without interruption. Ok, you can cut and paste 3,000 wpm with the internet. How fast can you get information out on your own without simply copying someone else's information?

pps - the amateur scene is considerably faster than you may suspect.

>
> I knew you could!

Nobody is using illegal amplifiers on GMRS/FRS - why? Because it
makes no pratical sense. If the MURS/FRS/GMRS channels get so crowded
that people need to resort to amplifiers for the reason you cited -
then it is simply time for the FCC to add more channels to these
services... didn't think about that one, did you?

You see, you are still trapped in trying to equate 11m CB with
FRS/GMRS/MURS - and it just doesn't work. 11m CB might be "frequency
constrained" - but, with channel narrowization, there are PLENTY OF
UNUSED FREQUENCIES on VHF/UHF for small footprint public services...
besides, if these folks are putting it to such good use, then the hams
shouldn't mind giving up a few VHF/UHF frequencies too, right? Try
scanning them sometime - they are VIRTUALLY UNUSED.

>Nobody is using illegal amplifiers on GMRS/FRS...(snip)

You are either lying or are ignorant of the facts. I am still leaning towards ignorant, but at this point it's a coin-toss.

Also, you also have yet to respond to my other comments vis-a-vis MURS frequency abuses already being noted. You insist it's not happening.

It's already being done. I know of truckers using Amateur 2M gear on MURS frequencies. I am willing to bet I will hear similar violations if I listened to FRS or GMRS.

>- why? Because it makes no pratical sense.

Who are you talking about, Dimwit Stew? You are not talking about people who have any "practical" knowledge of VHF practice or technique, and they bring with them the "If 5 Watts Is Good, 500 Watts Is Great" philosophies.

> If the MURS/FRS/GMRS channels get so crowded
>that people need to resort to amplifiers for the reason you cited -
>then it is simply time for the FCC to add more channels to these

You ARE a complete idiot! Let them ruin the functionality of the channels assigned, then assign MORE for them to likewise ruin...?!?!

STUPID! Just freaking STUPID!

>You see, you are still trapped in trying to equate 11m CB with
>FRS/GMRS/MURS - and it just doesn't work. 11m CB might be "frequency
>constrained" - but, with channel narrowization, there are PLENTY OF
>UNUSED FREQUENCIES on VHF/UHF for small footprint public services

There's nothing "small footprint" about the infestation you are suggesting, Stewart.

CB bootleggers already infest HF from 25 to 30mHz and numerous other bands in the HF spectrum. Both ends of 40 meters have numerous bootleggers. There's NOTHING 'constrained" about the problem.

They improperly use marine band radios for truckers and have been heard on MURS channels already. I am hearing truckers on Interstate 24 from my house in Franklin County, TN.

You really want me to believe these guys are running 2 watts?

>Try scanning them sometime - they are VIRTUALLY UNUSED.

I concur with Hans...You turn up the volume to mask your stupid comments.

4369. Off Topic...help Find?

Who is breaking a rule? Your statement is slanderous. The radio in
question is Part 90 approved, and meets all parts of the MURS
regulations.

Better get your facts straight, before you go accusing people of
breaking rules. THAT is illegal, by the way.

"better than amatuer"? What the hell are you talking about? I've
simply said that amateur radio has become a little less relevant with
the recent rules changes. THAT is a fact. Where do you come up with
all this other crap?

I have facts, Stewart, which seems to be YOUR weakness.

Is it just me, or are ALL of the ill-informed and foolish in SoCal these days? Certainly they are all west of the Mississippi.

Stewie ought to run on up to SinCity and see His Putziness and maybe they can come up with a mutually agreeable "schedule" on MURS so they can bad mouth Amateur Radio on license-free channels.

Ed, has anyone told you that you have a propensity for bending the
truth?

Read what I've said, and use the WHOLE CONTEXT. I'll repeat my
thoughts... Other than a couple of high-level repeaters, 2m activity
is virtually non-existant(or dormant) in San Diego County... and 2m is
the most active ham VHF/UHF band. You stupid shits extract one word
out of the statement, and use it out of context... you are no better
than that stupid cunt Hillary for using a tabloid headline "Bush
knew".

Do you folks really have such a LOW READING COMPREHENSION level, that
you can't understand a simple sentence? Or, have you simply lost the
ability to reason, or except change?

I'll tell you what, when I get my VX-5, I'll run some scans on the
various bands and post the statistics. I don't think you are going to
like what you see.

For crying out loud - this was 35 years ago.

The world has totally changed - everyone has cell phones now(except
me). The govt. is far more prepared to handle emergency comms these
days. I'm sorry to say, but I think you are living in the past.

But - if you must know, I don't believe ham radio is completely
pointless yet... but it is heading in that direction.

You know what - I'm starting to think that's why the FCC goes ahead
and simply allows all these CBers to have illegal amps - it is a
valuable National Resource :^) Could come in quite useful in an
emergency.

Yes, that is the question. You demand effort, but there is no effort for
the radio careerists. Should they be kept out because there is not
sufficient effort?

Minimum standards to operate at 7100khz are valid at 7099khz, yet the
government denies access to 7099. The electrical principals are the same,
the rf principles are the same, the propagation principles are the same, the
safety principles are the same...

You are getting old. You mentioned effort and "commitment." Swearing an
oath is a commitment. Taking a test is not. And I would guess that most
Americans have never sworn an oath.

Anything above that minimum requirement, i.e., General, is superflous. The
General once granted all priveleges, in a day when you had to beep fast,
take exams without question pools, and face down that mean old FCC Examiner.
The Novice was meant to be a limited license. The General was not.

> Ed, when will the ARRL start insisting on excellence rather than the current
> dumbing down of the test structure? Sorry for the direct question but I do
>not want to beat around the bush.

When the current test structure was being proposed by the FCC, ARRL asked for 4 classes of license, a maximum 12 wpm code speed and asked the Commission to increase the level of the written exam to balance the reduction in code speed.

ARRL is a member of the Question Pool Committee, and I know enough of the nature of ARRL's input to know that they routinely bring technical matters to the table with the Committee.

ARRL is also conducting on-line classes, publishes technical books and takes a number of other steps to help amateurs be better amateurs, techncial and otherwise.

I won't beat around the bush either, Dan. Your believe that ARRL does not want excellence in ham radio is not very well thought out and does not stand up to even a cursory examination of the things that ARRL does.

>ARRL seems to prefer the VHF/UHF + frequencies anyway.

What is your reason for believing this? I can't count the number of times a person with a different agenda than yours has argued with me here that all ARRL cares about is HF. :-)

The radio doesn't look all that impressive. Its sensitivity is a bit less than most modern ham rigs, though perfectly useable.

Its selectivity compares with modern ham rigs and it doesn't even mention dynamic range.

If that is your basis for why ham radio is "obsolete" and MURS is the future, you should rethink your position -- or at least rethink your justification.

Is there a MURS newsgroup or reflector? Perhaps I should go there and see if I can correct some of the misinformation you are passing about. The things you say there might be believed by those who don't know Amateur Radio, but when you say them here, you are not apt to gain any converts from hams who know better.

I have personally done tropo communications from a rooming house, using an IC-202 and its whip antenna. Propagation modes do not care whether a ham has a tower or not; in fact, an amplifier would be one way to overcome ground-clutter attenuation and ensure that the signal is lauched toward the propagation medium.

What you said to him was slanderous. Why do you get outraged when people do to you the same things you do to others?

>it is PLAIN IGNORANCE I tell you.

There certainly is some ignorance at work in this discussion.

Are you saying that the MURS channels are not popular enough to be overcrowded now? What are the reasons for its unpopularity?

The FCC might add more channels; after about 15 years of overcrowing on 11 meters, they almost doubled the number of channels. If they do the same for MURS, that would give them, say... 9 channels?

Do you think that those 9 channels will never fill up enough for some users to experience capture effect?

Some amateurs are granted amateur radio licenses with virtually no effort
involved. Why should professionals be denied the same right?

Interesting, we take a Test to get a License, then after we get the License,
the ARRL gives Classes, and provides info about Technical Stuff we should have
none before taking the Test.
Again I ask, so what is the purpose of Testing, since it appears we are
Testing people on Info that they have no knowledge of.

Not funny at all. Each class of license has a different set of *minimum*
requirements and thus has a different minimim requirements exam.

> > A spelling bee exam is an example of a maximum requirement
> > exam where there is one and only one winner.
>
> So you think the winner can spell any word then? Don't think so.

I didn't say it was an infinite requirements exam. Please pay attention.
The New England Patriots are not the best NFL team ever but they are
wearing the Super Bowl rings.

> You need to be worrying about your miscomprehensions, not mine. I know what I'm dealing
> with.

We all know what you are dealing with, Dick - a very short deck.

> But we took drastically different tests. You'll never be able to claim that you passed
> the same test I did, even though you have an extra lite to show.

I never claimed to have passed the same test you did but we both a passed minimum
requirements exam at different times and earned the same privileges. It's the
privileges earned that matter, not the test one took.

> Why are you so hung up on who respects what or who?

Because you are so desperate for respect that you demand respect for a minimum
requirements exam that you took decades ago. That act, by itself, is not worthy
of respect. It's what you did with your earned privileges that matters.

Someone suggested that the FCC may someday give the Advanced licensees the
choice of being busted back to General or passing the Extra exam. Since I'm
not getting any younger, I decided to alleviate that future potential problem
in a near effortless manner.

> And that very usage must be a signicant indicator that (CW) still has value.

Of course it has value as a communications mode. It doesn't have any value
anymore in playing that silly King-of-the-Mountain game.

Dan demands effort and commitment. I don't have a problem with
professionals getting a license.

Actually, it was Roger Whittaker singing, "I Don't Believe in If Anymore", in the context of statements like: If pigs had wings, they could fly. I'm sure Roger wasn't singing about valid conditional logical statements.

WOGER SPELLING DICTIONARY

"Basios"...word Woger uses when he gets neeeerrrrvous.
"Behing"...a cross between being and behind?
"Feamle"...I think he meant female.
"Losser"...only loser Roger can do it better.
"Ignroant"...typical, considering the source.
"Sluprs"...only Rogie knows what this means.
"Travelled"...a Rogerism, replete with ignorance.
"Postss"...pssst...Roger..that should be Posts.
"Defgenerate"...well, it's Roger's word...
"Faity"...he meant to say Fairy, but you know Roger.
"Distribiution"...Roger likes using phonics.
"Biotch"...he meant Bitch, but his phonics took over again.
"Methjadone"...a West Virginia substitute for Heroin.
"Anoinymous"...a cross between anonymous and annoying?
"Sumbliminal"...one of Roger's favorites.
"Recepticle"...either of Roger's moist cavaties.
"Cociane"...a West Virginia drug of choice?
"Tiome"...Roger meant to say Time...but his fingers were numb.
"Beraking"...no definition. Could mean 'beraking' the leaves,
"Amny"...he meant 'any',
"Nlay"...a town in Maylaysia? Vermont?
"Al;ong"...only Wussman knows what this means.
"Becasu"...well, becasu Roger is not the brightest bulb on the tree.
"Seperation". Why? Because Roger cannot "seperate" from his mommie!

Why should it matter where you learned radio as long as you learned it? Many hams including me got commercial radio licenses before we got the Extra class ham license. The point is it was learned. Today that isn't a requirement.

>
>So the code test IS more valuable than the rest of amateur radio combined,
>in your opinion.

Brian:

The PCTA has never argued that, it's only your own twisted construct. The value of the Pre-Restructuring code tests was to give radio amateurs the ability to effectively exploit ham radio's most basic mode of electronic communication. Nothing more, nothing less. It's just that we PCTA's who have learned to employ the Morse/CW mode understand it's value, and the NCTA's don't -- so they whine about having to learn it. The dumbing-down of the written tests was supported by the ARRL because they saw their membership numbers tanking, and felt this was the way to stop the hemmorage.

But I provided the qualification that nothing else would be known about
said amateur. Also, the evaluator would come from the mainstream of
humanity, not necessarily a 5wpm general lite in rrap.

No, I said it had no measureable value. However, Cecil reminded me that
that it did have value, i.e. in terms of operating privileges granted.
That is measureable and I agree with that. However, if it were not
measureable, it could still have a qualitative value that is not
measureable by quantitative means.

I gotta go too but before I do I want to leave you with three important
thoughts. You can forget everything else I have written as long as you
always remember the following:

1. Barbecue sauce NEVER includes tomato in any form.

2. Barbecue never includes anything but pig. No chicken or beef.
Barbecue is only pig and vinegar.

3. Barbecue is a noun, never a verb.

>The PCTA has never argued that, it's only your own twisted construct.

What is twisted, Larry, is your saying that "the PCTA has never argued that."
Those that believe that an Amateur exam must consist of a Morse-decoding skill
and a written test that includes all else about Amateur Radio, and that if they
fail to pass either they are not given priveleges cannot believe anything but
that Morse-decoding skill is equal in important to all else in Amateur Radio,
at least in meeting the minimum requirements to enter the avocation.

All the rest is justification.

You are not being very logical.

In the one place that matters -- before the FCC in a rulemaking procedure --
ARRL asked the FCC to make the written exams more difficult.

You are not being very logical.

>none before taking the Test.

There were no questions on antenna modeling or DSP (an upcoming topic) on any
of the tests I took. How about you?

Are you really suggesting that hams should know the equivalent of the 6-week
antenna-modeling course that ARRL conducts before being given their licenses.?
If not, what did you mean wnen you said that ARRL's courses provide information
about the stuff you should have done before you took the test?

I am trying to take you at your word, Bruce, but your words are not making very
much sense.

Amateur Radio Newsline™ Report 1293 - May 24 2002

This is a special announcement: Attention all listeners. Please be advised that our next newscast, Number 1294, will not be released until Sunday evening June 2nd. This is due to staff travel to an out of town event and will affect only next weeks newscast. ARNewsline newscast number 1295 will return to our normal Friday release on June 7th. Please adjust your release schedule accordingly. Thank you.

Also, once again this weeks Amateur Radio Newsline™ newscast is extremely audio intensive. We believe that it is impossible to really appreciate the words of those quoted without hearing them for yourself. For this reason we suggest that after reading this weeks print edition that you take your web browser to:

http://www.arnewsline.org

Click on the newscast number then download the MP3 audio file. Next sit back and experience a 20 minute "audio picture" of Hamventionr 200 for yourself.

Thank you. End special advisory.

--

Amateur Radio Newsline report number 1293 with a release date of Friday, May 24th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. 2002 turns out to be the year of surprises at Hamvention. This story is first on Amateur Radio Newsline report number 1293 coming your way right now.

(Billboard Cart Here)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 1

If nothing else, the 2002 Dayton Hamvention was filled with surprises. Surprises like this:

--
"I just flat do not believe that. What are the odd? The top three prizes and people without calls win them? There's a lot of guys walking out of here with their heart down in their shoe soles."
--

That's right. The top three prizes -- three top line ham radio stations and this year they were won by non hams. And before some of you channel

cops start saying that non hams cannot legally win ham gear guess again. The law is on their side. Not only did they win it. They went home with it.

Another surprise? How about business. Business as in what may be a record year for vendors. Why? Because those who came to Hamvention 2002 were armed with cash and ready to buy. Just ask Radio School's Gordon West, WB6NOA:

--
Gordon West WB6NOA: "Well at he booths I was working to show the Gordon West Radio School products the sales were very, very positive. I mean -- people came here to get equipment and to get back on the air.

Many new hams were going on the air for the first time, yet there were allot of older hams who were sort of not on the air allot trading up to new equipment.

Certainly, I think we are about where we were last year for attendance but enthusiasm in acquiring new equipment? Yes! Much more than last year.
--

As to the size of the crowd? There is still no official figure. Also, the weather was a bit unpredictable. Friday was wet. Saturday was first clear then wet. Sunday turned out to be the nicest weather of all. CQ Magazine's Rich Moseson, W2VU, was happy either way:

--
Rich Moseson W2VU: "I just love rain. On Friday it rained and everybody was inside and it was very, very busy and we had a great show.

Saturday it was nice outside and the Flea Market people were happier than they were on Friday. Overall, as always. Good show."
--

Moseson's view was echoed by Chip Margelli of Vertex Standard -- the Yaesu people:

--
Chip Margelli K7JA: "I think Hamvention this year was great. The weather was very cooperative especially on Saturday. This gave us lots of time to talk to customers and describe our products. We think that everybody was in a festive mood and a buying mood and that was good especially with all of the new products we have here. We've had a tremendous time here at Hamvention."
--

In reality, Hamvention 2002 was a buyers market. Dealers kept prices low and lots of major ticket items moved across the sales counters. In fact, it was possible to buy a Yaesu FT-817 for under $500.

As to what was new this year? Listen to what some of the company reps brought with them starting with Vertex Standard's Chip Margelli.

--
Chip Margelli K7JA: We have introduced new products in every major category. We introduced the Mark V Field high-end HF; the FT-897 second generation `man-pack' portable; the VX7R submersible handheld; the FT-8900 `quad-band' 10 meter, 6 meter, 2 meter and 70 Cm mobile radio and the Wires Internet repeater linking system. So we have had a very busy time."
--

Not to be outdone, Kenwood's Leo Famie, KJ6HI, said that those coming to his booth wanted to see a little HT called the F6:

--
Leo Famie, KJ6HI: F6, our new HT. A tri-band hand-held covering 2 meters, 220 and 440. It has a receiver from about 500 Kilohertz to 1300 MHz but blocks out cellular telephones. But the neat thing about this radio is its all mode receive in the band B. AM, FM, USB, LSB and CW."
--

Famie says that dealers sold well over 300 of these new H-T's making the F6 was a bright star for Kenwood at this years Dayton show.

And what about Icom you ask? We asked Ray Novak, KC7JPA, what was hot and what those coming to the Icom booth wanted to see:

--
Ray Novak, KC7JPA: 706 Mark 2 G by far. Also allot of interest in a new digital radio that we have that will give you bandwidth for data equivalent to a T-1 line."
--

One guy who always has something new up his sleeve is MFJ's Martin Jue, K5FLU. This year he gave Amateur Radio Newsline a peak at two new goodies. The one that really caught our eye is a high frequency beacon network receiver that is so pretty that it would be as much at home in your livingroom as in your hamshack. Not only that, it lights up a LED on a map to show you what beacon you are actually hearing: Martin gave us a simple explanation of how it works:

--
Martin Jue, K5FLU: "The beacons are precisely timed...so everything is exactly right. What we did was to duplicate that timing sequence in here. And we make sure that it is always right because we have an atomic clock receiver in here."
--

MFJ also showed its new Morse code interface box. Not only does it decode the C-W signal your receiver is hearing. It also lets you plug in a key, paddle or even a keyboard and send Morse like a pro.

But new gear and great prices were not the only surprises at Hamvention 2002 and we will have more later on in this weeks Amateur Radio Newsline report. (ARNewsline™)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N7QVK repeater serving Tucson Arizona.

(5 sec pause here)

**
RESCUE RADIO: HAM RADIO ASSISTS FOLLOWING UK RAIL ACCIDENT

RAYNET -- the United Kingdom's equivalent of ARES and RACES here in the United States was called out on Friday, May 10th. This, following a railroad crash that occurred in the city of Potters Bar less than one mile from the RSGB Headquarters.

The accident took place at about 1 P-M. G4MWO says that Hertfordshire Raynet County Controller, Trevor Groves, G4KUJ, was contacted at home at 2 P.M. and asked to assist with setting up the local Emergency Control Vehicle. Groves had it operational by 4.20 P.M. He then provided technical and administrative support to the relief administration staff who used it until office accommodations were arranged at about 8 P.M. that evening. (GB2RS)

**

RADIO LAW: COMMERCE COMMITTEE VOTES TO DELAY SPECTRUM AUCTION

Back on this side of the Atlantic the House Energy and Commerce Committee approved a measure that would delay the government's June 19th sale of spectrum now used by television broadcasters and sought for wireless services. The panel approved the action on a voice vote May 5th. As previously reported, this legislation was sought by a large segment of both the wireless and broadcast industries. The bill now goes to the House floor for consideration. (Published news reports)

**

SPECTRUM SHARING: MOVE OVER DIRECT TV - YOUR SPECTRUM IS ABOUT
TO BE
SHARED

The 12 GHz downlink spectrum used by Direct TV and Echostar is about to shared by terrestrial services. The CGC Communicator says that thanks to a creative idea and a multi-year lobbying effort by Northpoint, the 12.2 to 12.7 GHz band will soon be used for new video and broadband communications services, such as local television programming and high-speed Internet access. Technically, the new service is called "MVDDS," short for Multichannel Video Distribution and Data Service. (CGC Communicator)

**

RADIO ACCIDENT: FIRE ATOP THE KCBD-TV TOWER

The C-G-C Communicator also reports that KCBD-TV, in Lubbock, Texas, recently installed a new Andrew batwing antenna designed to accommodate both its channel 11 NTSC and channel 9 digital transmissions. After only five days of operation with just N-T-S-C power applied, there was an apparent arc-over and the
aerial was destroyed by fire. The station resumed NTSC operations using an old Alford antenna located on the same tower. Engineers are trying to determine the cause of the failure. (CGC Communicator)

**

GATHERINGS: WEAK SIGNAL BREAKFAST IN NORCAL

The Western States Weak Signal Society and Sidewinders on Two will jointly host a the semi annual "Brunch, Grip and Grin" in Northern California. The Date is Saturday June 1st. The location is Bakers Square in West Sacramento California. As usual, there will be door prizes and a good raffle of a radio. It all starts at 9:30 a-m, Pacific Savings Time. For more information contact W6OMF by e-mail to w6omf@cwnet.com. (VHF Reflector, WSWSS)

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 2

Now, continuing with our coverage of Hamvention 2002, lets look at the forums. Emergency communications was this years Hamvention theme and all of the sessions -- about 50 of them -- were in some way dedicated in some way to it. And while we could not visit every one of session, we do know that for all three days the forum rooms were packed. In fact, many sessions had people lined up against the walls and sitting in the aisles. That included our own Ham Radio Town Meeting that featured Popular Communications Editor Harold Ort, N2RLL as the keynote speaker. His theme: Emergency communications means more than just ham radio:

--
Harold Ort N2RLL: "I want to say that now is the time to learn to operate with other services in concert and not just with ham radio. That's really my message. And if you are wearing the blinders: If you are wearing the ham radio blinders -- take them off. Please.

I don't have all of the answers but I would like to have folks depart from business as usual. We have allot of smart people out there with specialized know-how.

And that's the beauty of ham radio. We can bring allot of radio users into the emergency communications mix so that we can help to make America safe.

Ladies and gentlemen: If we don't get it after 911, we really never will. Thank you very much. (Applause)
--

Ort's message: Its time to break down the barriers that divide us and work together for the good of our nation and the world. Or as Harold

himself said: If we don't get it after 911, we never will.

Another session that drew a stand room only crowd was the FCC forum with Bill Cross, W3TN. That one you can hear right now on the RAIN Report. Its on the web at in streaming audio www.rainreport.com or on the phone at 847-827-7246. (ARNewsline™)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

DAYTON 2002 - A YEAR OF SURPRISE - PART 3

The Hamvention Grand Awards banquet was held on Saturday evening. This years recipients included Owen Garriott W5LFL and Tonly England, W0ORE who shared the Special Achievement award:

--
OwenGarriott W5LFL: "As perhaps you could tell from that brief introduction, hamming has been a part of my life for over 55 years. I started with my father and perhaps you can tell from the sequence of events in my professional career hamming was a very strong influence on the direction. I went to undergraduate school, to college and to a professional career after that.

I know that this story is not unique. In fact it wouldn't surprise me if there were some 10% to 20% of those of you in the audience who could provide a similar story about how hamming has influenced your professional career as well as your past-time in the area of ham radio.

I do want to thank all I the Amateur Radio community for the benefit it has been to me in directing and guiding all of my professional interests over the past 55 years: All of the way back to the time that my father asked me to come along to code school, to theory school and ending up in my getting my first license.

It has been a great career and I owe an awful lot of it to Amateur Radio. Thank you."
--

Tony England W0ORE: "It was probably in the 9th grade when one of the big blizzards was coming through West Fargo and they sent us home. I remember vividly: My bedroom was up on the 2nd floor. All of the now was blowing by the window and I was playing around with the radio and I was talking to this Pastor at a mission in South America. It was a jungle setting and he was describing what they were doing down there.

And you can imagine what an imagination expanding experience it was for a kid in North Dakota to be able to talk to someone living in the jungle of South America? It was that kind of experience that we were hoping to share when we talked to young peoples groups on Spacelab II through the Amateur Radio system. And it is something that I hope we pass on to other kids.

When maybe one of my granddaughters is a teenager and an Amateur Radio operator I hope that she has the chance to talk to a professional female engineer who is on a spacecraft on its way to one of the moons of Mars. So I hope that all of you keep up this good work and see that this happens. Thank you. (Applause)

--
Al Waller, K3TKJ, was next. He received this years Technical Excellence award for creating qsl.net:

--
Al Waller K3TKJ: "...With that and the insight of the Dayton Hamvention Awards Committee we have certainly legitimized another mode of communication for ham radio. The Internet is not the enemy of ham radio that I have heard professed so many times. It is just another mode of operation.

Today we have hundreds of thousands of QSL users on the Internet. It is a friendly place. The hobby is better for it and I am honestly proud to be a small part of it."
--

Then, the man that everyone was waiting to hear from. The 2002 Radio Amateur of the Year, Hap Holly, KC9RP of RAIN. His closeing remarks brought down the house:

--
Hap Holly KC9RP: "In closing, please allow me to borrow from this years Winter Olympics a familiar international theme that sums up my exhilaration at being selected to receive this award. Simply put: `the year 2002 has truly been my Gold Medal year' in the Olympics of Amateur Radio. I am indeed honored to be chosen as Radio Amateur of the Year by the Hamvention, but also to be the first person with disabilities to receive this plaque. Thank you very much. (Applause)
--

But there was another surprise. This one involved KC9RP, a radio and a company known as Alinco and our producer Bill Pasternak, WA6ITF:

--
Bill Pasternak WA6ITF: "Hi Hap. I'm changing my uniform tonight. I was asked by the wonderful folks at Alinco and ATOC Distributing any by Evelyn Garrison to represent them because they are at a business meeting. But Hap, they would like for you to have...your very own -- brand new -- DJ-196 two meter handheld as their token off appreciation for what you have done and for what you and Stephanie both do. Enjoy it my friend." (Applause)

--

But the surprises were over yet. At least not for KC9RP. When the dinner prizes were drawn, the first out of the barrel was Hap Holly. And in addition to the Alinco H-T, Hap also took home a brand new Icom IC-V8000 two meter mobile and base radio.

So what about those who attended. What do they have to say. As everyone was heading out of the HARA Arena following the close of Hamvention 2002, Bob Sherman, K2SJP, summed it up best:

--
Bob Sherman K2SJP: "Its the best Hamvention that I have been to."
--

K2SJP says that he plans on coming back. Many others Amateur Radio Newsline spoke said the same thing. (ARNewsline™)

**

INTERNATIONAL - UK: ON THE AIR EVENT
Turning to international news, word from GB2RS that members of the Preston Amateur Radio Society are operating GB2COP until the end of May. This, to celebrate Preston being granted city status during The Queen's jubilee year. Activity is on 40, 20 and 15 metres HF, plus 2 metres and 70 centimeters. QSL GB2COP with an SASE either via the bureau or direct to M1KIT. (GB2RS)

**

DX

In D-X, A group of operators from the Kuwait Amateur Radio Society will be active as 9K2F from Failaka Island until the 31st of May. QSL is via 9K2RA either direct or through the bureau. (RSGB)

Also, Team Vertical is heading back to Jamaica for the CQ WPX CW contest. The group will operate from 160 to 6 meters as their home calls slash 6Y5 until the 28th of May. They will participate in the contest as 6Y2A with six full gallon stations. QSL via WA4WTG. (RSGB)

**

THAT FINAL ITEM: THE HAMVENTION THOUGHTS OF W6AQ

And finally this week, another look at Hamvention 2002. This time, through the eyes of a ham who has been to many of them. His name is Dave Bell. His call sign is W6AQ and as Hamvention 2002 was drawing to a close he shared his thoughts with our producer Bill Pasternak, WA6ITF:

--
Dave Bell W6AQ: "This was a great Hamvention. Except for the weather on Friday it was absolutely perfect.

Bill Pasternak WA6ITF: "What was the highlight to you?"

Dave Bell W6AQ: "I think that the highlight for me was the special ARRL dinner on Friday night for donors to the ARRL where we heard Joe Taylor, K1JT, give a really, really interesting talk. He has got a big sense of humor for a Nobel Prize winner, I must say."

Bill Pasternak WA6ITF: "We saw allot of new products here. Anything catch your eye?

Dave Bell W6AQ: "Actually the Yaesu FT-1000 Field I probably would have bought instead of the Mark V if it had come out at the same time. And I must say that getting an FT-817 little radio for under $500 broke my heart because I paid twice that."
--

Hamvention 2002 is now history, but Hamvention 2003 is now less than a year away. Dave Bell, W6AQ, says he plans to be there. So will we, and we hope to see you there too. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, one last call for nominations for our very own Amateur Radio Newsline Young Ham of the Year award. The final date to postmark a nomination is May 30th. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA, saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

>To believe otherwise is foolish and myopic.

FRS has been with us for a few years already with radios available
that anyone could afford. How long will it be before FRS is totally
overrun by nonsense, 20 to 30 years?

MURS activity in my area has dropped since it first became legal. I
expect to hear a small increase in use when MURS specific radios
become available but I don't expect to hear the armageddon that many
are claiming.

Most who will be attracted to MURS will not want to put the effort
into a monster station (which would do little good anyway.) If they
want greater range they'll stick with their cell phones.

Mike

I have yet to hear an echo box on FRS.

Roger beeps were initiated by radio manufacturers, not users of FRS
radios.

If you hear roger beeps on MURS you can thank the manufacturers.

Mike

The one real live problem I've heard about on MURS (as far as
non-certified radios) was with Ham operators using their 2m radios on
MURS.

The fox hunts will turn up some of their own people.

When is soon? CBers like to talk skip. Do you expect a particularly
odd sun cycle that will allow skip on VHF?

The only people who will come close to causing problems on MURS are
those who will pay less than $30 for their radio and those radios will
not have the range to bother anyone.

Why would anyone give up all their high powered CB gear that talks all
over the world for more expensive equipment that might possibly talk
to the next town regardless of power?

You should spend a bit of time around major interstates. Maritime frequencies and MURS channels are being usurped by truck drivers. Certainly not to the degree of Channel 19, but it IS a problem.

I am hearing truck driver traffic on MURS 151.82 and .88 from my location in Franklin County, Tennessee, and I am about 20 miles from my nearest aproach to Interstate 24. Those are NOT "legal" MURS radios they are using.

I have yet to hear anyone that was a Ham using MURS.

Stewart, I'll be dipped. You missed the point again. Too bad you were not (obviously) in NYC on 9/11. Go ahead, use your cell phone - IF you can. Amateur radio certainly can't provide the huge infrastructure that commercial concerns can, BUT ...

Beyond that, amateur radio SHOULD be about learning. I've tried to argue that what is being done at my employer's place for data collection is not the way to do it. I think I'll simply leave the latest issue of QST lying around the plant. Maybe someone will read the article on hidden packet stations and come to the realization that what I've been saying for two years is correct. This does relate to amateur radio - do you think we are all still using spark gap and cw or what? I've got news for you - things DO change, but PRINCIPALS and CONCEPTS still apply. 500 volts from that boat anchor can still kill you, despite the fact it was built 50 years ago. Internet, packet, amateur radio - they all have some common grounds. Allowing a CBer a 10,000 watt amplifier will only add to problems, not provide solutions. Your problem is very common - I see it at work every day. This is going to get REALLY funny. I can now retire (I hit 55 on the 21st). You see, many people at work have the same perceptions you do. Once my retirement papers are signed (which won't be for a few more years yet - I want more pension), I will be demonstrating an interesting program. I did it once before with the old Texas Instruments ladder controllers. I wanted to do it 6 years ago (but the young very important folks said - it won't work, you won't have all of the CPU instructions in it - listen to this, Bill Gates!). I can program any of the Allen-Bradley SLCs in under 15 minutes with nothing but the I/O listings. It will be far more efficient than the code they currently use (a 35 ms scan time will be brought down to well under 5 ms). Unfortunatly, I had to sign an agreement with my employer which forbids me to work for a competitor for 2 years - but this was done on MY computer AT HOME with MY software. It has been costing them over $200,000.00 per year for the last 5 years. I will demonstrate it. It will automatically place an OEM LOCK on the program in the controller at which point they can alway leave it in or put their old software back into the controller. My software has a copywrite. Tough ...

BWHAhahahahah

What is pointless is the attitude you and many others display. It is costing FAR more than you will ever have a clue.

Here's to 'pointless' amateur radio!

Jim

>take exams without question pools, and face down that mean old FCC Examiner.

Don't forget having to pass both code tests before even getting a look at the written, no CSCEs, and the 30 day mandatory wait to retest. Also the experience requirements for the Advanced and Extra.

>The Novice was meant to be a limited license.

And it was.

>The General was not.

That is incorrect. You are mistaken, Brian.

The General class license appeared as part of the restructuring of 1951. It was basically the old Class B, renamed. It was a limited license from the 1951 restructuring until February of 1953 - almost 2 years. The FCC announced that they intended General to be a limited license when they restructured in 1951, and again in 1967 when they announced the "incentive licensing" changes.

The General has also been a limited license since November 22, 1968 - 33-1/2 years.

The General did grant all operating privileges from February 1953 until November
1968 - a little less than 16 years. This came about because of a last-minute decision by the FCC in December of 1952. There was no NPRM, no public debate, no comments, just an order from the FCC that Generals and Conditionals would get the same operating privs as Advanceds and Extras as of Feb 1953.

The General has been a limited license for more than 35 of the 51 years since the it was introduced. FCC has said at least three times that the General is intended to be a limited license (1951, 1968, 1999).

Your claim that the General was not meant to be a limited license is simply incorrect. Mistaken. Untrue. Flat out wrong.

That was done years ago and we now have a legal service that will
continue to operate with very few problems for years.

Additional channels are not needed and will probably not be needed for
some time.

Mike

stewart,
The likelihood of more channels being added to
FRS/MURS/GMRS is very small. If they turn into a
'FUBAR' like other services have, it's a more likely
possibility that they will be deregulated and enforcement
turned over to local government agencies. Come to
think of it, with no license requirements for FRS, it
already falls under PL-106-521. Oh ho!

Professionals already went through some quantity of effort to obtain a commercial license, so much of their effort for an amateur license has already been spent. However, professionals must still expend a small amount of additional effort to become familiar with those items unique to amateur radio. Of course this contradicts M0iMD's original assertion (above) but I was only trying to be civil by asking him a question whose answer would lead him to an answer that would have caused him to contradict his own original premise. In hindsight it may have been more effective had I asked Mr. Burke "Is it reasonable to expect that it is possible for most professionals to be granted amateur licenses with no effort". Of course, "no effort" at all would not be "reasonable" as an expectation, thus N0iMD's original premise could have been shown to him to be a contruct of his own invent.

Very true as long as the operator has a modicum of technical
ubderstnding and/or an advisor/role model who does.

When the above folks are of the "I got more watts than you have"
mindset, all bets are off.

>Nobody is using illegal amplifiers on GMRS/FRS - why? Because it
>makes no pratical sense.

It makes no sense to someone like us who has some technical
background. It would appear to make a lot of sense to someone whose
extent of technical knowlesge is limited to or focussed on figuring
that 100 watts has GOT to be better than 4 watts because that's what
happens on 11m and anyway it's more watts.

Consider that I do get greater range (can hit repeater or fixed
stations further away) with my 50 w 2-m rig than when I crank it
down to 10 watts. It almost makes the ",ore watts is better"
argument.

I've been on 2-m proving that for the last 40 years.....

It all boils down to whether the use of amplifiers to increase the
power output of a MURS or FRS station is legal.

It is not.

A regulatory policy decision, not a technical decision.

>especially of light civil aircraft?

There are very few civil aircraft kits or collectables for the smaller general aviation aircraft. Most kits and collectables (ready-built, metal or glass-fiber) are for warbirds. Model hobby industry scale models are shifting towards vehicles. Here are some sites to peruse for kits:

www.hobbypeople.net (retail chain)

www.towerhobbies.com (retail chain)

www.revell-monogram.com (kit manufacturer)

www.testors.com (kit manufacturer)

There are some firms that do custom orders for specific aircraft types, rather expensive per unit but those can be obtained with near-exact color, decoration, insignia, etc. Do a web search for those but those are generally for military or air carrier aircraft as one-of-a-kind gifts.

Avgas getting too expensive for "real" flying? Miss a flight physical? :-)

From 97.3 Definitions -

"International Morse Code. A dot-dash code as defined in
International Telegraph and Telephone Consultative
Committee (CCITT) Recommendation F.1 (1984), Division
B, 1. Morse code."

You can get such a document in electronic form direct from
the ITU for a small fee. Electronic format in PDF. Large
document. Nowhere in that document is there any mention
of word rate per any unit of time for International Morse Code.
All that is specified is relative dot-dash-space duration.

S25.5 still says "International Morse Code.".

>code?

It gets better. After I got a copy from the ITU-R I challenged him on WORD RATE (as in WPM or words per minute). The ITU-R cite (actually ITU-T for landlines) does NOT specify anything on word rate. All it specifies are the ratios of dots, dashes, and spaces. Absolutely NO rate specification.

Phil's "comment" was to (in effect) shut up about it, it was "small potatoes" or something like that. Nobody should challenge the FCC about small potatoes (belongs Dept. of Agriculture).

Word rate in amateur radio testing is just one of those "unwritten" laws. I'm sure those things look good in courts. Maybe we could all make all the technical regulations as "unwritten" too? That would save time and trouble for everyone, especially all those hams who've never known how to do it and the many more who haven't bothered.

>I agree. And code proficence depends upon the code speed.

Why must there be different "code speeds" (word rates) in
US amateur radio?

OOK CW mode/modulation is NOT mandatory; all allocated
modes and modulations are optional for any licensee.

There is only ONE morse code word rate in present-day US
amateur radio license testing.

>> Dan can accept it, embrace it, or reject it. Dare he change it?

Then Dan will have to ACCEPT contrary points of view and also
drop his "I know what is best" attitude. TRY to live with it.

>Whether we care or not onviously does not not matter to you. The fact
>that it matters to many pther people who know nothing else about what a
>great ham you are, Brian, may or may not matter to you. But all I'm
>saying is that certification to a higher standard matters to people in
>general. That is Life.

"Certification" to US amateur radio regulations (being granted an
amateur radio license) matters to a number of people who are NOT
NOW in amateur radio. Holding yourself and your personal
accomplishments as some kind of "role model" to justify keeping
testing standards as they are is a vain, pretentious, self-centered
attitude.

The FCC grants US amateur radio licenses and the FCC is not,
nor has it ever been an academic institution. What the rules and
regulations WERE when Dan Finn was first (or last) licensed has
LITTLE to do with the FCC's task of regulating US civil radio NOW.

>> Messenger? You guys aren't the messengers. You're trying to be the
>> enforcers of a false system of values.
>
>I object to that statement. My role in Life is not to enforce any system

Seems to me that Dan Finn was playing a "Harry Callahan" role to
the hilt. Wrong script. Wrong city. Wrong role.

>You may disagree that what I observe is really true but that is another
>discussion.

Please make up your mind on what you are trying to enforce.

You are busy enforcing in this message, in other messages,
enforcing old standards and practices.

>Go ahead, take a shot at it, explain to us your New Wave
>approach to interpreting Humanity in general.

Please stop representing humanity in general. YOU are only
one very tiny part of it.

Please explain WHY all newcomers to US amateur radio MUST
adhere to the standards and practices and testing that was in
effect when Dan Finn was last licensed?

>Brian, the part about the actuarial tables is not a very nice thing to
>say.

Is Dan facing some kind of "mid-life crisis?" GET OVER IT.

EVERYONE is born, lives, then dies. FACT. WE CAN'T CHANGE
IT. LIVE WITH IT as much as you can.

Being born in 1932, I'm one of the oldest participants here. I've learned to LIVE with an unchangeable fact of human existance.

Rather than putting on blinders and avoiding anything to do with mortality, I just put it aside and concentrate on the FUTURE and those who will become (or not) radio amateurs LATER. All those test regulations will affect THEM, not you.

>The Amateur operator is supposed to be friendly and not darken the
>face of Amateur radio. Part 97 doesn't say that..but you know it is
>true.

IS IT?!? Also unstated in Part 97 (or anything in all of Title 47 CFR) is the enforcement of YOUR standards and practices and testing just because YOU took them or did them when you were last licensed.

>I am ashamed to be associated with a ham who writes like this.

Hey, I'm not "associated" with ham radio and I'm getting a bit pissed at YOUR writing attitude. Who made YOU god of ham radio?

>And you measure a ham by his statistical probability on an actuarial
>table. Nice guy.

I measure them by their attitudes. So far, I've not seen anything worthy of liking the hold-the-status-quo to YOUR liking to be likeable.

>> So the code test IS more valuable than the rest of amateur radio combined,
>> in your opinion.
>
>...putting words in my mouth...No, but it is probably more valuable than
>the written test at filtering out effort and commitment to amateur radio.

Brian wasn't putting words at all, simply commenting on what was already written by Dan Finn.

>Now a question for you:
>
>Do you value a person's probability statistic on an actuarial table to
>be more valuable than the rest of amateur radio combined?

A question right back -

Who the hell are YOU to demand "effort and committment to amateur radio?!?"

Neither I nor anyone else need PROVE anydamnthing to YOU or any other long-timer ham.

YOU don't "rule" US ham radio. Nobody does. It is primarily a recreational radio avocation, not some fanatical Code of Life or religious experience requiring Devotion to (Ham) Apostles.

When you want to discuss regulations as law rather than items
of a religion or act the fedayin supporting some "corps," fine, I'll
discuss. So far, you've not proved worthy of any newcomer's
demonstrations of "effort and committment."

>I wouldn't know about that but to pass today's written exams does not
>even require an education of the same quality as one might obtain from
>answering an advertisement on a matchbook, much less Milton.

A US amateur radio exam has NEVER been an academic
achievement test. The FCC is not chartered as an academic
instution.

The amount of education needed to pass ANY radio license test
in the US since 1912 has always been rudimentary. "Difficulty"
of tests has always been of a SUBJECTIVE nature...evident by
the previous tests increasing in "difficulty and complexity" as time
went on for all those who DO NOT require any further testing. :-)

>What is *your* vision of the future of amateur radio, Brian?

What is YOURS, Dan? Should everything be geared to the
standards and practices and education of the 1930s well into the
new millennium?

Why do YOU elevate yourself so highly in knowledge and skill of
the radio arts that you have some kind of authority to say what
is "good" or "bad" about testing?

Justify the NEED of morse code skills at high rates in this new
millenium for all future radio amateurs. Please make that an
OBJECTIVE justification, not the highly-subjective ones you've
stated often enough in here.

>A type of radio pest whose species has multiplied many times over since
>the introduction of the 5 wpm General amateur license. This QRMing
>creature has no known natural enemies because it refuses to use a call
>sign to identify himself. They are known to frequent the voice portions

>indistinguishable from problem 11 meter operators. They are usually not

>found on the code portions of the bands possibly because they are not
>capable of receiving 13 wpm code transmissions.

There is NO US ham band at "11 meters."

There is NO US amateur radio regulation REQUIRING morse code mode/modulation. All allocated modes are optional for any US radio amateur. That includes use of OOK CW on ham bands above 30 MHz.

The Enforcement Bureau of the FCC is open to any and all complaints of any radio emitter operating outside of regulations. If you are a US citizen, you will be as free as any other citizen to voice your complaints of alleged illegalities.

>I don't need to. The ratio is probably close to zero. Would you expect ARRL
>to have a presence in all major cities so that they could "broadcast" code
>practice via line-of sight communication?

Here in the southwest since 1956, I've NEVER heard any W1AW transmissions. Newington, CT, is rather well up in the northeast of the contiguous 48 states. Why is that relevant?

Why is it so NECESSARY for any US radio amateur to know morse code?

The FCC does not require mandatory OOK CW use...it is as optional as any other allocated mode for any class license.

>Come on Brian, when you studied for your license, surely you memorized
>the part about skywave propagation?

Why is that a relevant question in regards to the "Code Question?"

What is wrong about memorization? In my radio-electronics career I've memorized thousands of things, formulas, facts, figures that have never been formally tested.

I took my First Class Radiotelephone (commercial) test a month after being released from active duty. The amount of "studying" was an intense reading of the ENTIRE FCC rules and regulations as they applied to commercial radiotelephone use in 1955...a MUCH smaller collection of regulations than that of 2001. Passed all four parts in one test session which included multiple-choice, essay, and draw-schematics-of-tube-circuits sections.

"Skywave" propagation was a part of that, but NVIS (Near Vertical Incidence Skywave) was not yet coined in either the military or commercial field. Since I'd already spent 3 years of active duty *IN* HF communications (long-path 'skip') and low microwaves radio relay (line-of-sight), skywave as a path was not an important thing. Why is that so important NOW?

Is skywave propagation an "important" thing to know, just below
the top, morse code skill, in US amateur radio? If so, *WHY* ?

How come for why did you make a big issue over code before
and now you say "with all due respect, do not ask you?"

>Do not ask me how much more valuable a college degree is
>over a high school diploma.

Amateur radio licenses are grants, permission to transmit RF
energy on certain frequencies with certain modes and technical
requirements granted by a government agency.

Radio licenses are NOT "diplomas" nor are they any form of
academic achievements.

>For social lifeforms such as humans, wolves,
>bees, ants and even chickens, Life itself is one big pecking order.
>KR4AJ has nothing to do with it.

Dan Finn seems to be in a big stew over all that pecking, then.
In all due respect, may we ask him anything at all about all
that pecking? :-)

WRONG, mistah messenger. Radio regulations are codified by
humans in government, can be UNDONE by humans in

government at the request of other humans who are citizens.
That's called a "democratic process" of government.

When you keep insisting that radio regulations remain fixed,
unchangeable since the time when you got licensed, then
expect all kinds of shooting at you.

>Unfortunately, in our case, there is no option for new
>hams to be certified to the older, higher standard because we hams
>complained to the hilt and took that option away.

The first error above is in "older, higher standard." The "higher" part
is very subjective.

High-speed morse code skill might have been a good thing in radio in
the 1930s. This is 2002, seventy years later.

The FCC "gives and takes" civil radio regulations. "We hams" don't
make regulations, cannot give or take any regulations. That was
your second error.

>Do you think it is good to remove options to be certified under a higher
>standard of excellence, Brian, just because it is perceived as being
>unfair to the less talented?

An amateur radio license is now a "talent" certificate?!?

An amateur radio license, like all radio licenses, is just a regulatory
tool used by a government commission to regulate US civil radio.
If you need to "test talent," go into the entertainment business. The
FCC grants radio licenses. The National Endowement of the Arts
might do something to recognize "talent."

Please describe this "higher standard of excellence" (in amateur
radio) in more detail and PROVE the "higher standard" part.

Tell us and the FCC how this "higher standard of excellence" (as it
was applied to older hams licensed in the past, along with yourself)
NOW should apply to all future radio amateurs. Please remember
several things -

1. This is the year 2002, not 1982, 1972, 1962, 1952, or 1932.

2. The amateur radio community (of licensees) does NOT grant
licenses.

3. The FCC grants radio licenses and the FCC works for the good
of all US citizens.

>As far as the written portion is concerned, don't even bother with that.

The FCC has placed the amateur radio license test written test
questions and answers in the hands of the VEC Question Pool
Committee. They must generate a minimum of ten questions for
each of the required number of questions stated by the FCC.

Note that there is NO LIMIT on the number of questions above
the minimum of ten per required question.

>Any test in which the questions and answers are available in advance is
>not a test at all.

The FCC considers the US amateur radio license written element
test questions a "test." They ARE the agency granting US civil
radio licenses. The US ARS does not, repeat NOT grant any
amateur radio license.

I've had any number of formal class texts and tests which had
the answers known beforehand. A ham test is NOT an
academic achievement, will never be considered as such.

>The only challenging portion of the amateur radio
>test was the code test. But you know that already.

Keep up the rant that only the old-time ham radio standards
were the "good" ones. Hang in there in supporting standards
and practices of the 1930s in this new millenium as the "only
acceptible marks of excellence." This will make friends among
the old-timers and you can all pretend to defend the virtue and
honor of amateur radio as YOU ALL define it. Do you all also
issue ham licenses and have the authority to regulate US
ham radio?

Only if the emergency did not require ACTUAL communication. CBers with
illegal amps have perfected the art of "one-way communication". Thier
technology (if you can call it that) is all concentrated on one goal:
transmitting the loudest possible signal. The receiving side of the
equation (DSP filters, narrow IF filters, audio passband filters,
directional antennas, etc) is totally ignored because it isn't
relevant to them.

>laws.

The rate is unwritten in the international treaty. It is set at 5 wpm in the
FCC regulations, so I wouldn't call it unwritten. For whatever reason, the
Commission has decided that 5 wpm is a reasonable rate to test the knowledge of
International Morse code required by the treaty.

At the time, I found the General Class license test moderately difficult. Today, I would find it easy. Perhaps some are looking at today's tests and not quite seeing how hard they would be for a 14-year old kid. If I had been required to meet today's requirements when I was 14 years old, I really don't think I would have bothered to do so.

We already had a "VX-5 Tea Party"... but now that all the old Part 90
radios have been made compliant - and all new radios only have to meet
Part 95 regs - the citizenry has been appeased.

Yes - I think the "Boston Tea Party" analogy is a DAMN good one. I
wouldn't look for anything else like this to happen for a couple more
years, however. Right now, we are going to have to fill up the lower
three MURS channels.

Could we see consumer MURS radios by THIS Christmas? I hope so - and I
also hope they come with removable antennas(BNC connectors preferred).

I'd love to see a T7200 clone for MURS(with Wx), but with a BIG
removable antenna, and FULL 2W TPO on all 5 channels. Even if it does
cost $129 - I'd buy a pair... eventually the price will drop below
$100 at Wal-Mart...

I have said before that my posts are my personal opinions often based on
my personal experiences. I am not unique. I was describing how hams like
me react to emotionalism while trying to send CW or type on a keyboard.
I'm sorry you can't stand the truth but that's just the way it is. Some
people cannot send CW while they are angry and therefore cannot vent their
anger while sending CW. Why do you refuse to accept that reality?

> >Are you implying that I am lying?
> >
> Nope. Just mistaken.

How can I be mistaken? I described exactly how hams like me react to
emotionalism while sending CW or typing on a keyboard. I am reporting
facts. There is no possibility of a mistake. Everyone is NOT like you.
I am the only example needed to prove you wrong.

> > Everyone in the world is NOT just like you.
> >
> Of course they're not. Where did I say they were?

You are trying to tell me that my emotional reactions are not possible
i.e. "has no basis in fact". You are the one who is mistaken. My emotional
reactions are a fact and your words cannot change those facts. You're not
going omnipotent on us again, are you?

I don't bad mouth Amateur Radio - unless you consider me saying that
it is "becomeing less relevant" is bad-mouthing.

Remember - I still want to open up 1.25 Meters for a "New NoCode
Novice" Class... then, maybe, the Amateur Radio Service would be more
able to compete with the advances that are being made in the Personal
Radio Services... I simply want to make the ARS more relevant in
today's world.

If hams don't want to go this route, then why not give up the
whole(virtually unused) band to a MURS/GMRS-like service - one that
would allow ANYONE to use repeaters, and 56Kbps digital channels, and
10W TPO? Who needs Vegas? THAT'S excitement! It would be like when
they opened up Oklahoma to the settlers! YAHOOO!

> do you seem to believe that amateur radio stopped with spark gap in the
> early 1900's?

I don't - you misinterpreted the point of my post.

What I'm saying is that Amateur Radio has slowly become less relevant
in the last 10 years, but the trend is accelerating. As this trend
continues, the ARS is losing it's PURPOSE... this is especially true
on the VHF/UHF bands, whose use has dwindled to the point that they
are VIRTUALLY UNUSED. Even 2m has no more than modest activity -
other than a few high-level repeaters, and an occasional simplex or
packet QSO, or some folks doing EME... NADA.

Why not open up 1.25M for a new NoCode Novice Class? At least then we
could start getting families/friends/collegues involved with Amateur
Radio. Otherwise, why not just let the public use these frequencies?
They aren't being used for anything.

I have found that N0iMD tends to have many contructs under his own invent. He doesn't know

a thing about ham radio history prior to 1999. He has even stated in
this thread that he expects the actuarial tables to take care of the
older ham radio culture, after which he can presumably invent another
mega-construct of an HF ham radio culture that will, as usual, be of his
own invent. Watch out for Brian; he wants to tear it all down and
rebuild it in his own twisted and contorted image, a world of one
license, one "test". His proposed license structure is right out of Karl
Marx: "From each according to his ability, to each according to his need
(to fire up on HF)." Obviously Brian is either a Communist, or worse, a
Democrat.

Agree 100%, right now there only used by a handful of people. I think its time the FCC put these freqs to some good use, either by issuing them for the Population at large with no License required and no Silly Testing required. Or just sell them Off, and let some company make good use of them.

Good news, Stewart! I just checked, and 222-225MHz is open to NoCode
licensees. I think it happened back in about 1991. And 219-220MHz is
available for high speed data links up to 100KHz wide. Yes, to NoCode
licensees. Go do something cool!

Amateur Radio has changed. That is a fact. The reason it
changed, is that you can't build a radio cheaper than you can buy it.

All those Hams who could build a radio, are dead and gone.

What that leaves, is the Hams who like to interface things to a
pre-built radio. There is a lot of experimentation and fun in doing
those projects.

Radio is not the fascinating thing it was in the 60's and before.
Radio is boring since the invention of the CD. Not many people
stay up all night to here a far away AM station like we did as kids.

Radio is an appliance to Americans, not as much a hobby anymore.

The numbers will never again reach what there was at the peak
of Ham radio. The commercialization of RF to one or two
companies in America will continue, and Ham radio will go to
the same place that model railroaders, and slot car racing went.

Hobbies die, and people die. MURS is still-born.

Well, everything changes. Vinyl records are gone, but does it mean the music industry is gone? Are musicians gone? Likewise, amateur radio has changed, but it continues and is quite relevant today. If you understand packet, you won't have any problem understanding how many devices communicate (the first foreign language is difficult; others become easier). You mention the repeaters. Heck, we have a pack of 'em here in Rochester, NY. No, they aren't busy a good deal of the time (like at 3:00 am local time - but I've had interesting chats at those odd hours of the morning too, so they aren't dead even then). The purpose SHOULD be about learning. Just opening up frequencies for unlicensed use won't further learning. There are already a good number of frequencies for unlicensed use (even for wireless local area networks). One of the repeaters here locally is connected to several ports connecting 10, 6, and 2 meters as well as 220 and 440 MHz. I've had chats with stations in England and Australia over these (no, not internet linking - all rf paths courtesy of that 10 meter port). That said, this was just a simply recreation at the time. The learning is what pays off for everyone. Most hams have never been involved in an emergency. The point is that many are trained and could offer assistance
if needed. I guess the best I can offer is this - hospitals have much more equipment and doctors available; therefore we should eliminate ambulances. Right? No, amateurs cannot compete with the huge infrastructure that commercial firms have provided (I've stated that earlier); but some communications are better than none. Don't bet the farm that adding another 10 million people using FRS, CB, MURS, or whatever else that doesn't require a license is likely to help in a real emergency where telephones and power are out for many miles around.

73 from Rochester, NY
Jim

ps - there are a ton of bands for codeless techs. That is fine. If you suggest they should be open license free, then recheck this post.

People who died 10 years ago, are still listed as Hams.
Don't believe the numbers.

The other statistic tool you must know about, is per-Capita. That is,
how many Hams per 100,000 Americans in age groups like
9-12, 13-16, 17-20, 21-30, 31-40, 41-50, 51-60, 61-70, 71-80?

Have those gone up? No, they've gone down.

Did I say, "Like Ed says?" No, I said "Like Larry and now Dan..." I'll see
if you can figure out the rest.

> Is this one of those "what he said; what Brian heard" sort of things?

If you think it, it must be.

When you're ready to follow the thread, you'll see that Dan, like Larry,
values the old exams over the new exams. So much so that he thinks the new
hams are worthless.

Don't know about slot cars, but model railroading is alive and well.
They have new technology, called "DCC", where each locomotive
has an addressable decoder and you have handheld controllers
to control individual trains anywhere on the layout. Some of these
handhelds use a radio link instead of a wired link. Frequency around
900MHz.

I recall doing a chow run to "Shorty and Red's BBQ" in downtown Petersburg
VA. I got the BBQ, sammich, and my forecaster got the fried pig ear
sammich. That was my first real bbq.

But you're the one who demands effort. Not me. The FCC doesn't, and they
are the licensing authority. Perhaps its time to ignore all of your
nonsense since it has no bearing of life. At least untill you and Larry
cook up antoher good troll.

73, Brian

Larry never has been logical. Its always been an "eyes rolled back and
mouth open" reaction.

Meanwhile Dan Finn says since the advent of the published question pools,
the code exam is the only real test left. It is even more blatant that he
truly thinks that Morse Code is more valuable than the rest of amateur radio
combined.

Obviously a Milton reader.

Dan, I said that the actuarial tables will take me, too. So do I rise from
the dead like Jesus and become the Saviour of Amateur Radio? A 1,000 years
of freedom from old fools like you?

>Watch out for Brian; he wants to tear it all down and

You have no idea. But this new attack tells me that you're worried.

Thanks, Len. I didn't know Testor's had a site, but I guess I shudda
known.

>Avgas getting too expensive for "real" flying? Miss a flight
>physical?

Thankfully mogas is available in most places, but actually I am
considering a project at the request of a third party. Been a while since I
built a model and thought I'd take a look. And I just barely squeeked by this
last 3rd class physical without corrective lenses...Guess the next one will be
the one that says "Must wear corrective lenses while executing airman
priviledges" ! ! !

Thanks again ! ! !

That "was" the case and is changing and has changed to
the point where the liklihood that testing will end is
all but certain.

Cheers,

Here's a hot history lesson, Stew...that band WAS available to "Novices"
for a decade. It went nowhere.

It's been available to the no code Techs for over a decade now and it's
hardly any more populated than it was then.

So WHAT makes you think YOUR new "Novice" license will open it up?

>If hams don't want to go this route, then why not give up the

Just because the band is not channelized from wall to wall with repeaters
does NOT mean the band is not being used.

OK, given Part 97 and all referenced documents, recommendations, and specifications, WHAT IS WORD RATE IN MORSE ACCORDING TO REGULATIONS?!?

Absolutely NOTHING in Part 97 specifies WORD RATE.

The ONLY thing specified for International Morse Code is the relative ratio of dot-dash-space durations.

The morse character rate could be sent at anything from 5 to 50 WPM per character and still keep the "conventional" word rate (5 characters plus a space) at "5 words per minute." All legal and per the law...because the law DOESN'T SPECIFY WORD RATE.

Those who are already licensed will see nothing wrong with an incomplete law. They may not dare challenge it for fear of being re-tested.

The "older ham radio culture" will indeed be "taken care of" by
age, mortality, and attrition.

Brian has nothing whatever to do with it, neither do I, nor you.

It is stamped into your DNA and designer genes.

Live with it.

> Watch out for Brian; he wants to tear it all down and
>rebuild it in his own twisted and contorted image, a world of one
>license, one "test".

Poor baby...all upset at only ONE LICENSE CLASS?

How come for why was a SIX CLASS license structure so
manifestly noble, true, and good?

There are NO more "Advanced" class licenses being granted.
Is that what bothers you so much?

>His proposed license structure is right out of Karl
>Marx: "From each according to his ability, to each according to his need
>(to fire up on HF)."

Oh, that didn't exist before? My, my, and to think that myself and
two others (one was a ham then and still is) were busy working
three dozen HF transmitters for the US Army during the height of
the Cold War 49 years ago. All legal. No extra licenses or

"incentive upgrades" necessary. No OOK CW either.

Maybe you'd like to fill me and my buddies in on "Karl Marx" theory? Or do you subscribe to what is in the book "My Camp?" [translated title]

>Obviously Brian is either a Communist, or worse, a Democrat.

YOU show ME some effort and committment on why YOUR opinions have to rule on amateur radio regulations.

Should everyone enter amateur radio as a teen-ager? If so, why?

Should these youngsters also have some kind of cute outfit
with short pants and stiff-brim campaign hats and a belt of
merit badges on while operating?

I've been told that today's test requirements are "easy" and
"dumbed down" compared to 15 to 35 years ago. Which is it?

When I keyed on my first HF transmitter the only "license" I had
was a civilian driver's license. No morse code skill needed,
either; no OOK CW was ever sent. I had to know how to kill
others...my "effort and committment" was to stay alive and
destroy the enemy. Are you ignoring Memorial Day's real
meaning?

Four clubs to which I belong (W0EF, K0RT, W0YC, and W0TDX) use 1.25M for extensive digital and analog links for contesting/DX packet clusters, and remote receiver and crossband 2M/75CM repeater links. Additionally, several 1.25M repeater pairs are very popular in our area. I notice that there are at least a couple dozen 1.25M repeaters in San Diego county. And In case you missed it, Amateur Radio is in fact "public use" of these frequencies.

He pulled the same crap when he cranked up the Byte and CD Review
magazines. He's a bloomin' genius at finding new tech-based niche
interests which lead him to creating a magazine to cover those
interests, often the first rag to do so. All of which he turned into
platforms for spreading his never-ending inane rants around.
>
>
In the mid-1980s I went big into collecting music CDs when the medium
was first getting off the ground. The only mag on the subject was "CD
Review" so I subscribed to it. And there was the owner/editor hisself
Our Wayne spouting all kinds of vitriol & puke on the subject of music
CDs, the people involved, the industry standards, yadda, yadda. When I
first saw his byline I was stunned but then all I could do was giggle.
"Where have I seen THIS crap before?" came to mind. CQ mag in 1955 of
course. It took maybe two years worth of gritting my teeth and
ignoring his flamefests in CD Review before some corporate publication
chain bought the magazine from him and immediately turned it into a
pretty decent rag sans even a hint of toxic editorial content.
>
>
Wherin lies his genius and his Midas touch. He makes a huge bundle
every time he pulls off one of these startup turnovers or "salvaging
operations" a la 73 magazine. At the cap gains tax rate of course plus
he gets his own perverted jollies in print.
>

From what I have been reading, there is a pretty good chance the Russians among others will sink the no-code ship without a bubble. The issue is so low on the scale of things that one objection will cause its deferral as I believe has happened at two previous WARCs. The fat lady has yet to limber up the old vocal cords.

On a personal level, I think Morse has more than outlived its regulatory usefulness but at the same time the howling and gnashing of teeth would be a sound to behold.

Beers,
Dick N&#65533;BK

No problem, I get called worst names on the other 364 days.

All for having opinions not in the approved mainstream of
US amateur radio.

It would seem that all MUST march in ranks, united under the
Newington banner (or the like), chanting the same mantra,
"the ARS is all about working DX on HF with CW!"

>Amateur Radio has changed. That is a fact. The reason it
>changed, is that you can't build a radio cheaper than you can buy it.

That's been true for decades. One of the reason Heathkits became so popular
is that the cost of one was usually less than the cost of new parts.

I once compared the 1959 cost of a Heath DX-40 with the cost of the parts
as listed in the 1959 Newark catalog. The DX-40 cost less.

The way homebrewers save money is by using parts on hand, surplus
or obtained for cheap.
>
>All those Hams who could build a radio, are dead and gone.

Not true. I'm still around, and there are lots more like me.
>
>What that leaves, is the Hams who like to interface things to a
>pre-built radio. There is a lot of experimentation and fun in doing
>those projects.

I don't know if you really have anything to say, Roger. You didn't even allow the death of your mother in mid-April (published in the Moundsville Echo) to slow your torrent of filth. If you'd like to continue those of your sociopathic rants about me or my wife, I'll be happy to speak with Chief Stenger about you once again (as I cautioned you when we met face-to-face at the March meeting of Marshall County ARES). As you know, he has seen the posts you've made to and about me and my wife in the past and he seemed well aware of you.

quite sincerely,

Dave Heil K8MN

Len, I march to a different drummer even though I am an ARRL member. The Catholics gave me a good start at reading, and reasoning. No need to throw it all away on cronyism.

I wonder over which cliff that drummer is headed? Sorry comrade but you
have mistaken the drummer you are marching to. It is really a pied piper
that you and your co-dependent crony Len are following under the guise
of no-code everywhere, anywhere at all.

I wonder? I sure don't think we need superflous license classes, nor do we
need a code exam. Lets see if we can stay alive long enough to see how this
all plays out.

I hear this typical "garbage" from CBers all the time, Hams operating out of band. However where are all of those so called "Hams" operating out of band, and getting busted? I see far more CBers getting busted for freebanding, and running power. In fact several CBers have said they even heard me ID on the freeband using my Ham Callsign. Since I never operate there it's clear to me that somebody was bootlegging on HF using my call. Then to claim same instance as "proof positive" that Hams operate out of band, stupidly ID'ing themselves, does not persuade me in the least. Any further argument runs into the same problem, just because somebody hears a Ham callsign, does not imply it belongs to the person using it on the air. So until somebody can provide proof positive the accusation is basically BS.

The idea that Hams would limit themselves to 2 watts on five frequencies on MURS, compared with up to 1500 watts over 4 MHz on 2m, is so ridiculous as to not even be worthy of serious consideration.

This is a reminder to all: The purpose of this newsgroup is to DISCUSS AMATEUR RADIO POLICY matters.

Such regulations INCLUDE policy in regards to GETTING INTO amateur radio through licensing and the governmental regulations related to that.

Model building, including "scale" models has been long enjoyed by thousands the world over since before WW2 and there are plenty of other venues to discuss, ask questions concerning that particular hobby.

Neither is this newsgroup a venue for other off-topic postings concerning railroads, flying, personal gunnery, or the like not having any direct application to amateur radio.

The grant of an amateur radio license does NOT grant immunity from actions of controlling, shouting-down "lesser" individuals, or being generally uncivil through personal insults directed at individuals having opposing viewpoints (signing "putz" using a Yiddish pejorative).

All of that applies to ALL DAYS of the year, not just a national holiday in one nation.

Leonard H. Anderson
Sgt, SigC, US Army, RA16408336 (1952-1960)
71st Signal Service Battalion, 8235th Army Unit, Far East Command (1953-1956)

The 71st lost 23 members (KIA) of the battalion in the first two weeks of the Korean War, June 1950.

>>
>> yep.
>
>Same members.

Not quite. :-) Carl Stevenson is a member of the RCA (Radio Club of America) which was the first-ever radio interest club in the world, formed in 1909. Neither Carl, you, myself, or any other participant in this newsgroup were in existance in 1909...or 1912 when the first US radio regulatory agency came into being.

The ARRL was formed in 1914 as a local New England radio club to act as a substitute Western Union telegraph relay service to cheat costs of telegrams. The origins of the ARRL are NOT as noble, good, and pure as their PR would make them out to be.

The first two trials of a "national traffic service" message relay system organized by the ARRL were failures. That happened after 1914 when there were a number of different amateur radio clubs and organizations vying for members.

The "two hundred meters and down" banishment of amateurs to wavelengths shorter than 200 meters by the government came about through interference of radio amateurs to other radio services. It was NOT some noble, good, and true effort to "explore and pioneer the short waves" for international radio communications as has been made out by cult followers. It was simply that licensed radio amateurs were unable to avoid interfering with other services.

All of that is recorded history but the not-so-good side is selectively omitted or kept to an absolute minimum. That is necessary to keep myths alive and to preserve the image of a "service" (to country and citizens) with pseudo-military and religious overtones.

Amateur radio has always been a primarily recreational activity, a hobby. It has been emblazoned with false glory and honor by those who have a need for such things in order to make them feel better in their minds. Some, as in the original quote above, become confused on facts when awash in myths. Their problem, not mine, although they cannot admit to it.

Electronics and radio can be absolutely fascinating as a subject. To some, not all. We all have a choice. The "belongers" and myth-worshippers step in and DEMAND demonstrations of "EFFORT and COMMITMENT" to THEM by meeting a morse code test for an amateur radio license.

That demand is truly preposterous, a monstrous elevation of themselves and their inherent nobility that is perverse in its self-grandeur. They are radio gods and that is their justification, their belief system in a false religion of Self.

Laws and regulations must reflect their own inherent superiority. There is no arguing or discussion with gods. It is a fantastic and very memorable thing, appropriate for a Memorial Day? Not.

>This is a reminder to all: The purpose of this newsgroup is to
>DISCUSS AMATEUR RADIO POLICY matters.

Well damn, Lennie...we shared a civil moment and I thought, for just a moment, that a breath of fresh air had been breathed into this "relationship".

Then you kicked back into the rant mode.

And I will bookmark this post, Lennie...everytime you dive off into technical matters or take one of your OWN diversions, I will copy your own words back to you.

>Neither is this newsgroup a venue for other off-topic postings
>concerning railroads, flying, personal gunnery, or the like not
>having any direct application to amateur radio

Herr NG Reichsmarschall has spoken, so ya'll klick to and obey!

Actually, I brought my question here because in my PRACTICAL EXPERIENCE in Amateur Radio, there seem to be common threads of interest that permeate the community.

We "get into" it for a mutual interest in radios. We stay in it because we find a thread of other commonalities with other operators...a fellowship, if you will. A "relationship" you too could enjoy, Lennie, if you'd only allow yourself.

>The grant of an amateur radio license does NOT grant immunity
>from actions of controlling, shouting-down "lesser" individuals,
>or being generally uncivil through personal insults directed at
>individuals having opposing viewpoints (signing "putz" using a
>Yiddish pejorative)

Yes yes, Lennie...we know your position on such things...all 30 tons of it.

>Leonard H. Anderson
>Sgt, SigC, US Army, RA16408336 (1952-1960)
>71st Signal Service Battalion, 8235th Army Unit, Far East Command
>(1953-1956)
>
>The 71st lost 23 members (KIA) of the battalion in the first two weeks
>of the Korean War, June 1950.

Two things, Lennie...First you go ballistic on what does and does not constitute appropriate NG content, but then you sign the post with your veteran statistics. Please enlighten me as to how any of your non-combatant Army tour is germane to Amateur Radio newsgroup content appropriateness....?!?!

Secondly, what in the hell are you trying to pull off by claiming membership in a unit that suffered terrible combat losses three years before you were posted there? Hero by association? If that were true, I am due about 100 Purple Hearts, a couple dozen Bronze and Silver Stars, and at least two Congressional Medal's of Honor. I was in the same units as those who were awarded them, Lennie. Doesn't that count?

Do you know how really, REALLY foolish that looks? Those deaths occured three years before you joined it. So please tell me how any of that was germane to your rant on NG appropriateness.

Just wondering.

Steve, K4YZ

>
>I have said before that my posts are my personal opinions often based on
>my personal experiences.

So are everyone else's.

Your hypothesis attempted to explain why CW ops are, as a general rule, so well behaved compared to 'phone ops. For your hypothesis to be valid, your observations would have to be true for practically all CW operators, not just you.

(For proof of mode-related behavior, just look at FCC enforcement letters and NALs and see what modes are used for practically all violations).

> I am not unique.

Everyone is unique, even identical twins.

>I was describing how hams like
>me react to emotionalism while trying to send CW or type on a keyboard.

That's fine. You did not make that clear in your original description.

However, your hypothesis attempted to explain why CW ops are, as a general rule, so well behaved compared to 'phone ops. For your hypothesis to be valid, your observations would have to be true for practically all CW operators, not just you. Your description of yourself may be accurate, but unless it applies to practically all CW operators, it does not prove your hypothesis. Basic Logic 101.

>I'm sorry you can't stand the truth but that's just the way it is. Some
>people cannot send CW while they are angry and therefore cannot vent their
>anger while sending CW. Why do you refuse to accept that reality?

I don't "refuse" or "deny" that reality at all. Your hypothesis attempted to explain why CW ops are, as a general rule, so well behaved compared to 'phone ops. For your hypothesis to be valid, your observations would have to be true for practically all CW operators, not just you. Your description of yourself may be accurate, but unless it applies to practically all CW operators, it does not prove your hypothesis.

Some people can send CW while they are angry and therefore can vent their anger while sending CW. Same for keyboards. They simply control their behavior.

In other words, "some" does not automatically mean "all" or even "most".

Some people cannot talk into a microphone while they are angry and therefore cannot vent their anger while using voice modes on the air.
>
>> >Are you implying that I am lying?
>>
>> Nope. Just mistaken.
>
>How can I be mistaken?

Your hypothesis of general behavior by hams on CW is not proved by your description of yourself.

>I described exactly how hams like me react to
>emotionalism while sending CW or typing on a keyboard.

That's fine. All hams are not like you.

>I am reporting facts.

OK

>There is no possibility of a mistake.

Are you perfect? If not, there is always the possibility of a mistake.

In fact, the claim that there is no possibility of a mistake is, in itself, a mistake. It therefore proves itself false.

> Everyone is NOT like you.

Where do I claim that?

>I am the only example needed to prove you wrong.

Have I put forth any hypothesis as to why hams on CW are so well behaved? Not that I know of. I simply point out that, according to FCC enforcement actions and my own experience, hams on CW are, as a rule, practically all well behaved. As a general rule, on CW there is practically no cussing, no jamming, no heated arguments, no stuff to make the ARS look bad that I know of. There may be some, but I haven't heard it and nobody here has been able to provide concrete examples. Compare that record to voice modes.

Your hypothesis attempted to explain why CW ops are, as a general rule, so well behaved compared to 'phone ops. For your hypothesis to be valid, your

observations would have to be true for practically all CW operators, not just you.
You have not proved your hypothesis.

>> > Everyone in the world is NOT just like you.
>>
>> Of course they're not. Where did I say they were?
>
>You are trying to tell me that my emotional reactions are not possible
>i.e. "has no basis in fact".

Nope. You are mistaken.

I am saying your hypothesis has no basis in fact because you have not shown your observations to be the general rule among hams using CW.

>You are the one who is mistaken.

Only if I accept your invalid logic, or think you are serious about any of this.

>My emotional
>reactions are a fact and your words cannot change those facts.

Nobody is debating your emotions.

>You're not going omnipotent on us again, are you?

Not me.

You are delusional if you think anyone who matters wants to "toss out" CW.
OTOH, the Morse code *requirement* is NOT cheap and has outlived its
usefulness.

It would seem ridiculous to limit themselves to 2 watts on MURS, they
were running well in excess of 2 watts on MURS.

On with the fox-hunts.

It was a hypothesis based on personal experience and may or may not apply to
the majority of hams. Just how many hams do you know who can send code when
their hands are shaking in anger. I know I cannot. I assume there are many
more hams like me. In fact, I would challenge anyone to send decent code when
their hands are shaking in anger.

> > I am not unique.
>
> Everyone is unique, even identical twins.

Are you saying that I am the only human being whose hands shake when he is
extremely angry? Get real. I would say it is extremely common.

> >I was describing how hams like
> >me react to emotionalism while trying to send CW or type on a keyboard.
>
> That's fine. You did not make that clear in your original description.

I have made it clear in subsequent postings. Why are you still arguing?

> >I'm sorry you can't stand the truth but that's just the way it is. Some
> >people cannot send CW while they are angry and therefore cannot vent their
> >anger while sending CW. Why do you refuse to accept that reality?
>
> I don't "refuse" or "deny" that reality at all.

Then why did you say "it has no basis in fact"? That certainly sounds like
a denial and a refusal to accept reality to me. What I posted is 100% factual.

> Some people can send CW while they are angry and therefore can vent their
> anger while sending CW. Same for keyboards. They simply control their behavior.

And I wasn't describing people like that. I was speaking from experience and
describing people like me. Sorry you refuse to accept that fact. I would
estimate that people who can send CW while extremely angry are a small
minority of the ham population.

> Your hypothesis of general behavior by hams on CW is not proved by your
> description of yourself.

You are mistaken. It was not a hypothesis of general behavior. It was a description of hams like me of which there must be a considerable number.

> >There is no possibility of a mistake.
>
> Are you perfect? If not, there is always the possibility of a mistake.

I am perfect in reporting my capabilities while under emotional stress. There is *NO* possibility of a mistake. I am an ordinary prudent man.

> In fact, the claim that there is no possibility of a mistake is, in itself, a
> mistake. It therefore proves itself false.

Bull$hit! I cannot send CW when I am very angry. That is a fact. No mistake is possible.

> Have I put forth any hypothesis as to why hams on CW are so well behaved?

Yes, and my personal experience contradicts what you said.

> You have not proved your hypothesis.

My hypothesis is that hams like me cannot send CW while extremely angry. That is a fact not subject to question.

> >You are trying to tell me that my emotional reactions are not possible
> >i.e. "has no basis in fact".
>
> Nope. You are mistaken.

Go back and read your posting. You are either mistaken or lying.

> >My emotional
> >reactions are a fact and your words cannot change those facts.
>
> Nobody is debating your emotions.

You are. You said my inability to send CW while extremely angry has "no basis in fact". Go back and read your own posting.

We can thank the broadcast industry who found ways to drop in local
or regional AMs where the clear channel "holes" were and the
manufacvturers who now make AM broadcast transmitters that are much
more reliable and therefore do not need to go off the air on Sunday
nights for "maintenance".

>Radio is an appliance to Americans, not as much a hobby anymore.

It's our job as hams to make it a hobby again.

I dunno, Paul. The thread started about how great MURS is. How is MURS more relevent than amateur radio? As far as your per-captia stats, you might have a point. U.S. colleges are graduating more and more foreign engineers and doctors than ever. You may have a valid point. I wouldn't be surprised to find the U.S. an also-ran 3rd world country in another 25 or 30 years. Everyone wants an MBA. Read Dilbert. It is one comic strip worth reading. Don't worry - Japan will design and build all the FRS, cell phones, stereos, and televisions you want. (oops, make that design. I forgot. The little dragon is building the stuff now - at least the stuff that China isn't.)

If that happens, the fat lady better get out the
score for the Requiem Mass. The coffin lid will
definitely have been nailed shut on amateur radio.

Well I have seen hams use out of band freqs, 151.055, 451.1875.... not just heard, but seen. Don't for a minute think that hams don't go out of bandm they do it all the time, for various "reasons". Threy don;t get busted, cuz they don;'t cause interference, they run open pl, and aren't running dirty amps.

> The fox hunts will turn up some of their own people.

I hear this typical "garbage" from CBers all the time, Hams operating out of band. However where are all of those so called "Hams" operating out of band, and getting busted? I see far more CBers getting busted for freebanding, and running power. In fact several CBers have said they even heard me ID on the freeband using my Ham Callsign. Since I never operate there it's clear to me that somebody was bootlegging on HF using my call. Then to claim same instance as "proof positive" that Hams operate out of band, stupidly ID'ing themselves, does not persuade me in the least. Any further argument runs into the same problem, just because somebody hears a Ham callsign, does not imply it belongs to the person using it on the air. So until somebody can provide proof positive the accusation is basically BS.

The idea that Hams would limit themselves to 2 watts on five frequencies on MURS, compared with up to 1500 watts over 4 MHz on 2m, is so ridiculous as to not even be worthy of serious consideration.

Maybe, maybe not. If enough other countries, of whatever technical advancment, see it otherwise you lose. Maybe the Russians and a few likeminded would be enough to cause it to be delayed for another WRC cycle.

Jim, if ham radio dies because too many potential hams
skip the
whole thing solely because they believe it isn't worth it to
learn the Morse code to 5 words per minute, nothing whatever
in Creation itself could possibly save it. What a concept -
kill off ham radio because I refuse to do the code.

That kind of people are no asset to ham radio nor anything
else.

This god of radio doesn't understand the difference between
Catholicsm and Lutheranism. I am a Lutheran...of the spirit
of ol' Marty when he nailed those Theses on the church door.
:-)

He thinks there is "cronyism" there, but cannot understand
(gods seldom do) that there is NO real difference between our
opinions in regard to earthly matters, such as laws and
regulations on radio.

Lacking understanding and the ability to comment coherently
on earthly legislative matters, this "god" resorts to nastygrams
such as "comrade" and accusations of "communism" in regard
to amateur radio regulation opinions.

That results in the usual rationalizations of amateur radio having
some kind of weird socio-political-religious overtones. Anything
out of the mainstream (as in communiques from Newington) is
now un-American, un-democratic, and religious heresy.

Gods are like that. :-)

Robeson asked an off-topic question. He got a civil reply on that off-topic question.

Robeson has some delusion that this newsgroup is for any subject a licensee wishes to bring up and NO ONE may dare challenge a licensee on anything.

This is NOT a model aircraft newsgroup. It is a newsgroup created for discussing amateur radio policy, specifically created to handle the morse code testing issue in regards to US amateur radio licensing requirements.

Robeson has NO rank that justifies his constant personal insults and misapplied pejoratives when encountering opposite opinions or criticsm. Robeson is NOT any kind of NCO or officer in here. He should quit acting like one...it reflects badly on the US amateur radio community.

Neither word is regulatory law. At question is the regulations in Part 97, Title 47 CFR in regards to CODE RATE.

Here's the exact words out of Part 97.3 -

"(26) International Morse code. A dot-dash code as defined in International Telegraph and Telephone Consultative Committee (CCITT) Recommendation F.1 (1984), Division B, I. Morse Code."

I have a copy of that CCITT document, obtained from the ITU. All it defines for International Morse Code is the relative ratio of durations of dots, dashes, and spaces.

It says NOTHING about code rate in WPM, characters per minute, or anything else in terms of communication rate.

YOU show me where in Part 97, Title 47 CFR, where there is any morse code RATE defined. I don't see it. You can't see it because the FCC did not define word rate in morse.

The VECs can send test element 1 at ANY rate they want for license testing. Since there is NO legal specification on word rate in the regulations, the character speed could be anything from a 5 WPM equivalent on up to a 100 WPM equivalent or faster and any rate in between. It's all very legal the way Part 97 is now written.

Part 97 can say "5 WPM" all it wants but that doesn't mean that there is some "automatic definition" of rate. Regulations are supposed to define things it is talking about and the test element 1 rate is NOT so defined.

You can explain all you want about the word "PARIS" and "CODEX" and "what it means" but you are NOT stating anything that should be defined in Part 97 as regulatory statements.

Sorry if you think I offended your loyal Bud (comrade). Why can you not default on the side of excellence in your so-called earthly matters such as laws and regulations on radio. Instead, you default on minimum requirements, i.e the minimum that you think should be necessary to hold a license to use a highly desirable portion of the radio spectrum. From there you say that all that is necessary are said minimum requirements in order to be fair to those less inclined to strive for excellence. So committed are you to minimum requirements that your invoke those NAZI national socialistic epithets to attack those who would like to see a return to excellence. The victims of your NAZI's were rich bankers, industrialists and even farmers who needed to be 'stopped' because they were able to accomplish what the mainstream refused to accomplish. They practiced excellence. Therefore they must have been evil. Let's be fair to the less driven people! Let the peasants arise with their pitchforks and drive excellent people back to the 14th century.

Some people are driven to excellence. Some people are driven to minimum requirements. Because the laws in our country necessarily tend to favor the minority minimum-driven populace who do not want to learn code, i.e. they default to worse case in terms of being fair to protect even the idiots, you seem to be winning the battle. I happen to agree with the spirit those laws but they were intended to protect the less intellectually endowed, not to sow a culture of dumbing down. However, in taking advantage of such laws, you and your ilk have accomplished exactly that.

You and Brian seem like very intelligent people who could easily do well in striving for excellence but something stops both of you...you step back as if in fear...perhaps you would be guilty to be able to earn what others cannot, and with very little effort. I wonder why? This is a very interesting news group.

And was subsequently served an off-topic tongue lashing about what is and is not appropriate for this NG...Which was in and of itself inappropriate in light of Lennie's inability to stay topic focused himself. Shall we count YOUR topic diversions, Your Putziness? Over a DECADE'S worth?

>Robeson has some delusion that this newsgroup is for any subject
>a licensee wishes to bring up and NO ONE may dare challenge
>a licensee on anything.

A lie by the liemaster.

There are a great many "off topic" conversations here. I keep out of most of them as they do belong elsewhere. However I don't as a rule "answer" them, and THEN tell them it's "inappropriate".

That's YOUR job, Lennie...Not that you are any good at it.

>This is NOT a model aircraft newsgroup.

Then you should not have answered the post, Lennie. In retrospect, I now see that this was but one more opportunity for you to inject another "been there-done that" with your revelation of having worked at one of the model builders.

I thought you were trying to be a nice guy. Shame on me.

>Robeson has NO rank that justifies his constant personal insults

This was not about personal insults nor perjoratives, Your Lyingness. I asked a civil question, and for once you were able to answer accordingly. Threw me off for a moment. But then you sank right back in to the same routine.

You are the one who needs the lessons about rank/priviledge, Your Foolishness. You accuse others of it, however YOU are the one who finds it necessary to bandy about his CV, (non-existant) war record, and sign "off topic" posts with ranks and serial numbers of long-ago abandoned military

service.

The funny thing is, YOU are the only one who can't see how foolish you look.

Wake up, Lennie. Time is not ALL lost yet.

Thats correct, Dick. You're beloved code which you value more than all of the rest of amateur radio combined is only part of it. And when the Morse exam goes out the window, CW will still remain as part of amateur radio.

I don't know why you have such a problem with it.

During the cold war, the Russians were still using vacuum tubes after the US
had progressed to solid state. The cost of their military is one cause of the
demise of the Soviet Union. The Russians are struggling into the 21st century
in many ways, are hanging on to a lot of things that have outlived their usefulness,
and so are you. Why do you want to stand in the way of freedom of choice of modes
in amateur radio along with inevitable progress? Would you also like our armed
forces to go back to bows and arrows and catapults?

Point is, the silly King-of-the-Mountain game needs to be laid to rest. I agree
with you that Morse code is only a part of it but is probably the most irrational
part.

You are confusing cause and effect, Dick. It is outdated requirements
like Morse code that can *result* in killing off ham radio. If ham
radio is to survive it must be attractive to potential hams. Leave
the Morse code requirement and fast forward to 2050. What do you
see?

BS. Russians are sharp enough to let us do all the R&D and pay for it so they can just go ahead and copy it for their own use. Surely you've heard about their copies of things like the BC348 and B-29. Not to mention the A-bomb.
One primary reason we have such an advanced economy over theirs is a little thing known as a credit line. Ours runs to multiple $trillions while theirs is nonexistent. Beware when they finally do develop their economy and resources.

You're a real joke, Cecil. Why would the most basic means of
radiocommunication be anything less than attractive to potential hams?
Just because you can't do much with it doesn't mean no one else can.

If there exists such a things as ham radio in 2050 it will look much
more like CB or your RF internet.

At the rate technology is advancing Jim, I'd say we are barely
nose-above-water now.

At the risk of offending some persons, I believe that part of our problem
is we are so involved in Affirmative Action and other social engineering
programs that we are inhibiting the flow of otherwise qualified candidates to
those educational programs.

And as one involved in healthcare such that I am, I can say we are driving
away American candidates for those programs by refusing to put caps on tort
laws and by refusing to reign in healthcare conglomerates from unethical work
practices. We can't get Americans to go into those fields in sufficient
numbers, but foreign candidates are chomping at the bit to get here that they
will accept the wages and risks. If they get sued, they can split. Happens
every day.

So credit is the primary reason that we are technologically advanced over the Russians? Of course, Capitalism Vs Communism couldn't have anything to do with it. The Morse code testing is basically Capitalism (freedom) Vs Communism (statist control) all over again. "Mr. FCC, tear down that Morse code requirement wall."

> Screwe youe. You're a real dim bulb.

Hey Jim, Dick just proved my premise that people can't type when they are angry.

CW *is* attractive to a lot of potential hams. What is unattractive is
the Morse code *requirement* that puts Morse code on a pass/fail level
with everything else in ham radio combined. You are continuing to
confuse CW, the mode, with the Morse code requirement. The two
subjects are virtually unrelated. The Morse code requirement is
like forcing everyone to pass their driving exam in a 1950 stick-
shift Ford before being allowed to drive any other vehicle. Do
you support that concept?

SSSShhhh!!! We don't want this SECRET to get out... that 1.25m is not
being used for anything.

Heaven forbid that we actually allow these frequencies to be used for
something!

A quick tour through the repeater guide indicates a LOT of repeaters within access range of Murietta, Stew.

And I also know for a fact that 222mHz is very active for remote base controlling, auxiliary control and other "non-traditional" applications (ie" honey-do traffic at rush hour)

Ed, I rest my case from a different thread. The amateur tests ARE too
easy. I would be happy with a fair knowlege of the regulations and
basic safety. That, sadly, appears to be beyond the reach of some folks
that have already obtained licenses.

Yup.

> He doesn't know a thing about ham radio history prior to 1999.

Not true. Brian knows quite a few things about ham radio history prior to
1999. However, his claim that "the General was not meant to be a limited
license" is simply incorrect.

> He has even stated in this thread that he expects the actuarial tables

> usual, be of his own invent.

The "actuarial tables" will eventually "take care" of all of us. Note
that the "older" ham radio culture is not defined.

I would define "older" or "traditional" ham radio culture this way:

- Genuine interest in radio for its own sake
- Polite, civil behavior on the air (and off) at all times
- Operating skills
- Practical technical skills and knowledge
- Homebrewing and modifying equipment
- Public Service
- "G-rated" content
- Healthy, friendly competition
- No barriers because of age, gender, race, or socioeconomic status
- Play by the rules at all times

There are lots of younger hams who identify with this "older"
ham radio culture.

Dan used older. I simply said those who remember numerous, superflous
license classes will be gone one day. After that, hams will just consider
themselves hams without all this false class distiction.

> - Genuine interest in radio for its own sake
> - Polite, civil behavior on the air (and off) at all times

Hoo boy. That would be nice.

Fantastic! Nothing wrong with that until you add:

Cronyism
Double Standards
Cliques
Intolerance for newcomers and beginners
and
License class bigotry

> Amateur Radio Service?
>
No, not exactly true. Raising code speed to 50 wpm is not a default. Instead. it would effectively be a decision to require Morse above everything else at the risk of losing a large part of the amateur community. Only a few Countries have done that. Certainly the US has not. A decision to default on the side of excellence would simply be to not lower the present standards with respect to the simplest form of RF communication known to man. For example, where I live, parallel parking is almost never required. In Raleigh, I could easily get through life without ever knowing how to parallel park. Yet, North Carolina society deems it valuable for me to know how to parallel park and require that ability in order to obtain a drivers license. Why? Perhaps parallel parking is an indicator as to how a person knows how to judge the operation of a motor vehicle. If one does not know the fundamentals of parallel parking, how can the State of North Carolina sign up to the fact that one knows how to operate a motor vehicle and issue a candidate driver a license. Besides, if I travel to Manhattan, I really must know how to parallel park. If I don't, I will tie up their traffic. If I QSO with a ham in Cuba who is touching 2 wires together, I need to know Morse code, otherwise the Cuban loses the ability to communicate with me and I have no business cluttering his bandwidth because there is someone else who knows code that he should be communicating with. Basically, if you can't play with the big boys, don't ruin it for everyone else. Ham radio is not a game, it's a service. If you can't ride a bicycle and you're on US-1, don't slow the traffic for everyone else just because one is capable of pedaling only at 5 mph. Yes, we do care if you know how to ride a bicycle. And you do...you can ride (copy code) at 25 mph (wpm)or more. Why defend the Brian P Burkes' who cannot copy now but could if they tried?

In article <3CF370E5.3FC53D40@IEEE.org>, CAM <Cecil.A.Moore@IEEE.org> writes:

>During the cold war, the Russians were still using vacuum tubes after the US
>had progressed to solid state.

The Russia and the Soviet Union are not the same thing.

So what? Did their equipment fail because it had tubes?

The Soviet defense philosophy was different than ours, that's all. If the USA had gone through what the Soviets did during WW2, our defense philosophy might be a bit different.

The Soviets were the first to orbit an artificial satellite, first to put an animal in space, first to put a human in space (who also was the first human to orbit the earth) first to photograph the far side of the moon. They also built rockets that could be launched at 30 below zero without blowing up.

>The cost of their military is one cause of the
>demise of the Soviet Union.

How much of their GDP did they spend on their military, compared to the USA?

>The Russians are struggling into the 21st century
>in many ways, are hanging on to a lot of things that have outlived their
>usefulness, and so are you.

The only things the Russians are hanging onto that have outlived their usefulness
are some old ideas about the West.

>Why do you want to stand in the way of freedom of choice of modes
>in amateur radio along with inevitable progress?

Who is standing in the way of freedom of coice of modes? Certainly not W0EX.

Progress is not inevitable.

>Would you also like our armed forces to go back to bows and arrows and
>catapults?

"Our armed forces" never had them in the first place.

and, by the way,

Today, May 28, 2002, Russia joined NATO. That's a good thing.

4641. Debunking the MURS/GMRS/FRS Amplifier Myth

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-29 00:16:40 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0205281616.4a5ccf0@posting.google.com>
Source record: 43960
Cross-posted to: alt.radio.family,rec.radio.amateur.policy,rec.radio.amateur.digital.misc,rec.radio.cb,rec.radio.amateur.misc

Like any of the classic urban legands - LSD tattoos, Kidney theft,
Alligators in the sewers - the GMRS/FRS/MURS high-power amplifier myth
just keeps making the rounds...

http://www.urbanlegends.com/

The myth - spread by hams having a strong "radio cop" slant - has
absolutely no basis in fact. The motivation for spreading the rumor
is somewhat complex - but, the main motivation appears be to maintain
some kind of "superiority complex" these hams harbor over "CB users".
A secondary motivation seems to be to stop the growth of these
wildly-popular radio services - as ham VHF/UHF usage has continued to
decline in recent years, these services are rapidly growing in
popularity.

There has never been a reported violation involving amplifiers on any
of these VHF/UHF frequencies; and, the fact is, there is simply no
real motivation for the average person to use amplifiers on these
frequencies.

THE BASIS FOR THE LEGEND:

Illegal amplifier use on 11m CB frequencies has been an ongoing
problem for many years. However, the dynamics of radio wave
propagation on HF CB vs. VHF MURS or UHF FRS/GMRS are quite different.
Sky wave, or "skip" propagation is commonplace on HF frequencies. To
take advantage of this propagation requires running more than the
legally-allowed 4W output allowed on 11m CB... as a result, many
truckers(and other citizens) have resorted to using illegal amplifiers
to raise the output of their radio stations to outrageosly-high
values; 500, 1000, 1500, even 2000 Watt amplifier use is commonplace -
allowing these individuals to communicate great distances(sometimes
1,000s of miles when the "skip is in"). A side result of this
"culture", has been that these individuals resort to a kind of
"entertainment" by jamming smaller-powered stations ("squashing") when
the "skip is out".

However, on VHF/UHF frequencies, greater than Line of Sight(LOS)
propagation is a fairly rare occurrance - so there is no initial
motivation for an average individual to run a high-powered amplifier
on these frequencies.

The fact that there has never been any direct proof of individuals
running amplifiers on these frquencies, seems to be of no consequence
to the professors of this urban legend. They will come up with all

kinds of contorted reasons why "The end is near", and "widespread amplifier use on these frequencies is just a matter of time". Of course, these are the same arguments these individuals have been making for YEARS, and still - as there are no alligators in the sewers, there are no high-powered amplifiers on GMRS/FRS/MURS.

When I was licensed in 1963, there was Novice, Tech, General and Extra. Even though the General carried all operating privileges, we saw the Extra as a cut above. Unless the FCC goes to one license class, your vision of a classless society will never come to pass.

In your classless vision, do you think the requirements should be at today's entry level, ensuring maximum number of new hams, or at today's Extra, ensuring few new hams, albeit fairly well versed in Amateur practice before they even begin?

I've been monitoring all 5 MURS frequencies for some time now mobile. All I have ever heard is the typical business junk and fast food drive through order windows with just one single exception. I hear low power 1.2KBS FSK packet activity on 151.880 MHz around the Square Lake and Interstate 75 junction in the city of Troy Michigain. Once you get more that a mile or two from that area the signal drops from a S9+20 to almost nothing. A high power signal this is not. And this is in a metro area of several million people with a good percentage of active Hams. So if what you say is true then I should have picked up more that one lousy low power packet station in the last year I have been monitoring, particulary given the size of the Detroit area.

A broken TV has never been worth anything, so a free rig is probably out of the question. Of course, even in the 60s, one usually had to buy a chassis, knobs, etc., unless one had a well-stocked junkbox.

One could probably salvage all the parts needed to build a transmitter from today's junk TVs, too, but it is probably a lot more cost effective to buy a kit.

And some of them may in fact be legitimate depending on the Ham. Some do have license privileges to transmit on other than the Ham Bands. In one case I remember seeing a Royal Oak city cop, in full uniform with side arm, sitting at a table in a small restaurant on Woodward Avenue with a very plainly obvious Yeasu HT. His heavy duty Motorola radio was nowhere to be seen. Was he a Ham? I don't know because I didn't ask, and I didn't see him making a transmissions with it while I was there to check for a callsign.

In the first place, your math is a bit defective, Stew; there are more hams today, not fewer. It seems to me that you are the one trying to misrepresent ham radio to further your cause.

Why would hams care what happens on a handful of MURS channels?

>There has never been a reported violation involving amplifiers on any
>of these VHF/UHF frequencies; and, the fact is, there is simply no

Only because useage is light. :-)

> Sky wave, or "skip" propagation is commonplace on HF frequencies. To
>take advantage of this propagation requires running more than the
>legally-allowed 4W output allowed on 11m CB...

Nonsense. I have worked US to Europe on 21 MHz with about 1 milliwatt of transmit power.

You have it wrong, Stew; the power is needed on VHF to work various scatter modes, not on HF, where propagation allows QRP signals to propagate worldwide.

Nice try, but you shot your argument in the foot.

>A side result of this
>"culture", has been that these individuals resort to a kind of
>"entertainment" by jamming smaller-powered stations ("squashing") when
>the "skip is out".

That IS the reason that people have to run more power on HF or VHF, Stew, and human nature being what it is, people are predicting that it will happen on the MURS channels, too. To promote MURS use, you seem to want to deny that.

>However, on VHF/UHF frequencies, greater than Line of Sight(LOS)
>propagation is a fairly rare occurrance - so there is no initial

You need to learn about the backscatter modes on VHF, Stew; hams use them all the time, and power is needed to make them work.

>Of
>course, these are the same arguments these individuals have been
>making for YEARS, and still - as there are no alligators in the
>sewers, there are no high-powered amplifiers on GMRS/FRS/MURS.

How many years have the MURS channels been available, Stew? Just curious. How many users in your area?

It is not "VIRTUALLY USELESS". For operating well beyond the LOS for two stations it would be true most of the time. However for two stations within LOS of each other it is not. One of the factors is the about of ground clutter between them, and how much of the RF power is either reflected off in to space or absorbed. The only other way to beat path loss, while using the same rigs, other than antenna gain, is to boost TX power, thus the market for V/UHF amplifiers. Think about it the next time your cell phone will not connect while inside of the big department store or a customer's factory location etc.

So how come we've seen no such howling and gnashing
of teeth so far? Sure there are some outspoken PCTAs,
but nothing that even comes close to any strong
support. As to the soviets, they are but ONE contrary
in the face of a unanomous group in favor of ending code
testing.

Cheers,
Bill K2UNK

"We" also looked upon experienced hams who were doing things as a cut above the rest. Many were/are Extra class, but not all. Several were lowly Techs running circles around most of the Extras I've known.

>Unless the FCC goes to one license class, your vision of a classless society will never come to pass.

Dammit Ed, can't I have a dream without you messing it up?

> In your classless vision, do you think the requirements should be at
today's

No, but I do think todays entry level license is very difficult to attain, and conveys dangerous power authorizations for and entry level license. It needs to be reworked.

> ensuring maximum number of new hams, or at today's Extra, ensuring

even
> begin?

Don't be silly. Can't you envision a license presently called "General" that is a middle ground, and was good enough for all priveleges back in the heyday of slipstick competency?

>The myth - spread by hams having a strong "radio cop" slant - has
>absolutely no basis in fact

No "radio cop" problems here, Stewart...Just facts. Either truckers are using linear amplifiers on MURS or they are using Amateur Gear.

>The motivation for spreading the rumor
>is somewhat complex - but, the main motivation appears be to maintain
>some kind of "superiority complex" these hams harbor over "CB users".

No...the motivation is debuking your lying..either that or youa re grossly ignorant. In either case I would not want to be the one with my britches hanging out like you let yours.

>A secondary motivation seems to be to stop the growth of these
>wildly-popular radio services....(SNIP)

"Wildly popular"...?!?!

GMRS is dead in all except a few heavy metro areas. I have had the GMRS pairs programed and scanning for almost as long as I have lived in the greater Chattanooga area, and have only heard sparse traffic, and it's all from Nashville. Atlanta fares better, however not by much.

FRS? FRS is a kiddie band. Anyone who considers FRS as a serious "hobby" band is only fooling themselves. It has it's utility, but that's all it has.

MURS? I have been to every Radio Shack store from Marietta, GA to Manchester Tennessee and no one knows what it is. When I asked about the "color dot" business radios, only one store (Chattanooga) had sold any in recent memory.

CB? HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! !

> as ham VHF/UHF usage has continued to
>decline in recent years, these services are rapidly growing in
>popularity.

Yeah...Wal-Mart sells a bunch of those for 8-12 year olds.

>There has never been a reported violation involving amplifiers on any
>of these VHF/UHF frequencies...(SNIP)

I see...if the FCC doesn't mail a copy of the NAL to Stewie, it didn't happen.

(UNSNIP)...>and, the fact is, there is simply no
>real motivation for the average person to use amplifiers on these
>frequencies.

Just as there is none for thier use on 11 meters.

>However, the dynamics of radio wave
>propagation on HF CB vs. VHF MURS or UHF FRS/GMRS are quite different.

Stewie, the issue is "how far can I talk, and who can I talk over". That equates to power, be it DC power or ERP. Current Amateur gear is already being used for illegal purposes as is maritime VHF radios.

> Sky wave, or "skip" propagation is commonplace on HF frequencies. To
>take advantage of this propagation requires running more than the
>legally-allowed 4W output allowed on 11m CB..

Thank you for clearly demonstrating your IGNORANCE of HF propagation, Stewie, especially at the 10/11 meter region. Four watts is moe than enough power for the purposes for which the service was created.

>as a result, many
>truckers(and other citizens) have resorted to using illegal amplifiers
>to raise the output of their radio stations to outrageosly-high
>values; 500, 1000, 1500, even 2000 Watt amplifier use is commonplace -

Ignorant putz.....

CBers were talking coast to coast in the 60's and 70's with "legal" power. Linears are only used to be able to overcome perceived interference.

>allowing these individuals to communicate great distances(sometimes
>1,000s of miles when the "skip is in"). A side result of this
>"culture", has been that these individuals resort to a kind of
>"entertainment" by jamming smaller-powered stations ("squashing") when
>the "skip is out".

No...that's a 24/7 affair.

>However, on VHF/UHF frequencies, greater than Line of Sight(LOS)
>propagation is a fairly rare occurrance - so there is no initial
>motivation for an average individual to run a high-powered amplifier
>on these frequencies.

It's not about skip...Get it through your toilet papner thin mind, Stewie...

>and still - as there are no alligators in the
>sewers, there are no high-powered amplifiers on GMRS/FRS/MURS.

You ARE an idiot.

> What would the default be, if not 50wpm? 70wpm?

Hmm, CAM builds the straw man base for N0iMD, steps back and N0iMD adds
more pieces of straw to make the construct larger but more unstable.

CAM knows how to push the ON switch to activate N0iMD. N0iMD has no idea
that CAM is playing him like a Stradivarius.

Q: Who will shoot it the straw man down?

>>Instead. it would effectively be a decision to require Morse above
>>everything else at the risk of losing a large part of the amateur
>>community.
>>
>
> An Amateur Service of One? What's wrong with that? Would it exclude KR4AJ?

A: N0iMD. Through no creativity of his own, Brian shoots down the straw
man. Even KR4AJ is excluded from ham radio, according to the straw
logic, therefore the KR4AJ position cannot be valid. N0iMD is actually
exposed as a part time puppet of CAM.

The straw logic can hardly stand up on its own weight and Brian
easily topples the straw construct and claims victory.

Rather stupid, don't you think? Vladimir Lenin used to do the same
thing. He got it from Karl Marx, Comrade Burke.

heh heh heh...and it's the oldest 6th grade trick in the book.

Good grief, Stewart. One begins to wonder exactly what you are trying to promote. I've run phone patches from Guam to Webster, NY, running only 15 watts! I've gotten into a cw net thousands of miles away - running MILLIWATTS. Power is needed in VHF/UHF for some of the more exotic modes. Meteor trails, moonbounce, some scatter work ... heck, with my 6 double a alkalines, I can open repeaters close to 100 miles away (well, one that is high - and that is when I'm up on the 23rd floor of an apartment complex, but you get the idea). Problems happen when unknowlegable folks apply the golden screwdriver. I've seen posts which state you only have to turn a pot to make your FRS radio 'louder'. I doubt going into deviation and descriminators would help as it is likely over that user's head. Believe me, I've had a lot of fun back in the early 70s with CB. The urban legends usually circulate amongst those who don't know enough technology to know when something is simply not true. I saw a post perhaps not a week ago on a board from someone looking for a mod for a radio. Another guy posted a link to a website with the mod. Sure enough, TWO DAYS LATER, the first guy posts again with the subject 'HELP'. Seems he let the smoke out of the components. Seems the radio is stuck on 28.500, won't transmit, and squeals when the audio gain is turned up. You seem to think the amateurs are putting people down. The problem is that some folks are being led into things that they know nothing about - and it shows when some 27 MHz signals are 50 KHz wide. Unless you are working moonbounce, a 3 dB signal gain or loss won't usually amount to anything - yet people mod their rigs to try and get that 3 dB extra, which is usually spread where they don't want it. My guess is that the majority of amateurs are running 150 watts or less. The large majority. And working stations worldwide every day. Why do you think one necessarily needs a linear? Sure, the big gun DXCC guys run 'em (often with a mentality that is similar to yours), but most don't honestly need 'em. Besides, going from a ground mounted vertical to a 3 element beam up 60 feet will often gain you as much or more than increasing from 100 to 1000 watts and cost less.

I totally reject your "concept" because it is grossly inaccurate, not to mention plain old wrong. Requiring learning the code is more like requiring one to learn to drive on a two lane highway before going onto a freeway. Can you say THE BASICS?

Why should someone who hates Morse code and will never use it have
to meet the Morse code requirement? For him, it is a 'make work'
requirement like digging a hole and filling it up again.

> Basically, if
> you can't play with the big boys, don't ruin it for everyone else.

I fail to see how someone who doesn't know Morse code could ruin CW
QSOs since he wouldn't be operating in that part of the band.

Another fine example of the absolute propensity of the code haters' routine outright lying about the actions, activities and viewpoints of anyone who supports a code qualification for hams. You should be ashamed of yourself, but of course you aren't capable of that.

Sure, if VHF had skip. I have not heard any high powered MURS
stations anywhere between Everett and Seattle WA.

If you'd like to chat with your high powered buddies on MURS you might
take a little trip to Billerica, MA. Sounds like it would be an easy
fox hunt, well, more like an elephant hunt.

Nope, it's not, Dick. Driving on a two lane highway and driving on a
freeway are both "driving". It's like allowing automatic transmission
drivers on two lane highways but requiring them to demonstrate stick shift
skill before allowing them on a freeway. There is nothing to keep a
ham from achieving excellence sans Morse code skill just as there
is nothing to keep an automatic transmission only person from being a
good driver. You are still demonstrating the "No Code = No Ham" mentality.

Anyone who supports a code qualification for hams before they are allowed on HF
wants every HF ham's first "mode" to be Morse code. That's prima facie, Dick.
You want every ham to possess Morse code skill before being allowed to use
any other mode on HF. How you can deny that is beyond belief.

Hans, Steve;

Come on you guys... I'm not about to run out and buy a 1.25M rig ;^)

Now - I'll have to admit that I was considering buying a Yaesu VX-5 -
mostly because I wanted to play around with 6m. However, I understand
the FT-817 is fairly reasonably priced these days... pretty impressive
little QRP backpack unit... I suppose I could even use it on HF :-O

How can a reasonable person hate an abstraction such as a code? Can one hate ASCII or C++ or might they simply find them difficult to learn and dislike studying them? In and of themselves, these concepts are not physical and are not capable of being hated per se. There is no way to focus hate on a neutral technical concept. One may say that they hate Darwin's theory but what they really may hate is the possibility of it being true. One may say that they hate calculus but what they really might hate is refusing to be able to logically accept the summation of an infinitely high number of infinitely small areas. It goes against some peoples' grain. Calculus, Darwin and code are neutral and not capable of being truly hated in and of themselves by reasonable people.

One may disagree with the Morse code requirement but hating Morse code would seem to portray some psychological implications that would imply an irrational internalizing of Morse Code as a physical object of hate. It would imply an agenda...the Sohl-Anderson-Burke-Marx agenda of "From each according to his ability (no matter how limited), to each according to his need (to fire up on HF").

> For him, it is a 'make work'
> requirement like digging a hole and filling it up again.

Nobody likes to dig holes, only to fill them up again. I completely agree with you. This is truly a characteristic of international Communism (and Democrats) and the New World Order (Novus Ordo Seclorum) of Globalism. Holes that are dug must stay unfilled.

But the privilege allows 5wpm Gen's to use CW sub bands. This can be very disruptive, an analogy being someone riding a bicycle in the left lane of I-40. Should they be allowed on sub bands where they are incapable of communication at a reasonable and acceptable speed?

Isn't it just TERRIBLE! People are starting to communicate all OVER
the place. We can't have THAT now, can we? Better start a rumour on
the Internet, right away! We need to get this evil GMRS/FRS thing
BANNED!!

NOW - THE REAL REASON FOR THESE SMOKESCREENS:

Having failed in their attempts to assert the URBAN MYTH that
high-powered AMPS are being used on MURS/GMRS/FRS, these ham "Internet
Lobbyists" are now trying this NEW TACTIC to divert attention from the
fact that the ham VHF/UHF bands are VIRTUALLY UNUSED - and that
FRS/GMRS/MURS are runaway success stories in public communications.

PSSSTTT!!! Don't look now - but the ham 1.25M band has FALLEN
SILENT... go ahead, scan it for activity sometime - THERE ISN'T ANY!
... and sales of radios for the 222Mhz band have all but dried up.

... what to do? WHAT TO DO?! Let's start another rumour - there are
CHILD MOLESTERS on FRS!! That's it! We need to BAN FRS, because the
Catholic Priest Radio Club has infiltrated FRS with GMRS bubble-pack
radios!

What does that have to do with the activity on the VHF/UHF bands?
Besides, growth is actually way down over the last few years, as a
percentage of the population(ignoring the spurt surrounding
restructuring).

> Why would hams care what happens on a handful of MURS channels?

I told you - primarily it has to do with some kind of misguided
superiorty complex; and secondarily it has to do with hiding the fact
that the VHF/UHF bands are going virtually unused.

Look - I've been trying to set things up so this band get more usage -
most hams don't want to listen, because they don't really give a rat's
ass about 1.25M, other than a "turf war" thing, whereby they just want
to keep the status quo, no matter what is in the best interest of the
county, or ham radio, for that matter.

Just like the CW code speed reduction idea, eh?

As I recall, you LOST that one BIG TIME... and you'll LOSE this one
eventually, too.

Yes - eventually the ARRL and the FCC will see the obvious - it is
only a matter of time. You can try to slow down progress - but
EVENTUALLY it will catch up to you and pass you by.

Tell me - why do you do it? Why do you fight progress? Go back and
think about all the arguments you made fighting the code speed
reduction - they are the same ones you'll make against opening up
1.25M to a new Novice Class. It's been quite a long time now since
restructuring, and NONE of the bad and evil things you predicted have
come true. Why are you so NEGATIVE? Don't you have ANY faith in your
fellow Americans?

I think you need better research... here I did some, myself:

Doc said on 5/3/2000:

As the 'old' saying goes, "If you can't do
the time, don't do the crime." ('Baretta' had it right
as far as I'm concerned).
'Doc/W5LZ (ex: AA5AN)

Nice 'hero' model, 'Doc. Maybe you need a new role model. BTW, I
think Baretta's 'new' saying goes something like; "If you can't do the
time, get a good lawyer."

OK, I'll bite.

What is the context you intended for "All those Hams who could build a radio,
are dead and gone"?

I've been a ham for 35 years come October. In that time I have built, from
scratch, several HF receivers, transmitters and transceivers. I've also had
manufactured rigs, built kits, converted surplus and brought basketcase rigs
back to life.

One of my current HF rigs is a 100 watt bandswitching transceiver of my own
design, built from recycled parts. (The other one is a kit I built a year ago).
Just the latest in a long line of projects that goes back to my first rig back
in 1967.

I'm 48 - not dead yet. In fact, I'm getting better. And there are lots of hams
like me out there.

Who are the hams you are referring to?

The discussion was really about "high-powered amps"; it is VITUALLY
USELESS to use high-powered amplifiers(>75W) in the context of LOS
MURS. Rather than restating the whole premise in each and every post
- I've posted the entire premise in another thread... the point is -
people simply haven't been using these amps on UHF GMRS/FRS or VHF
Itinerants in all the years of the existance of these services - why
all of a sudden would anyone think they are going to start to use them
now?

>When I was licensed in 1963, there was Novice, Tech, General and Extra.

A minor point, Ed: In 1963 there were also about 39,000 Advanceds, making up about 15% of the US ham population. Of course Advanced had not been open to new applicants for more than a decade back then.

>Even though the General carried all operating privileges, we saw the Extra as
>a cut above. Unless the FCC goes to one license class, your vision of a
>classless society will never come to pass.

I agree to a point. Even with one license class, there will not be a "classless society".
>
>In your classless vision, do you think the requirements should be at today's
>entry level, ensuring maximum number of new hams, or at today's Extra,
>ensuring few new hams, albeit fairly well versed in Amateur practice before they >even begin?

Excellent question. How many steps does the ladder need? Having fewer steps can mean the steps become bigger unless the ladder is made shorter. Some folks only want a stepstool.

Note however, that some folks think the current Tech requirement is too difficult, even though it has been attained by preschoolers.

--

What needs to be developed is a new license structure for the US ARS after S25.5 goes away. Which will most probably be in 2003-2004. The smart thing to do is to have a proposal developed and ready to go to the FCC before that happens. FCC is happy with three license classes, so that's a starting point.

In my decades of Morse CW hamming, I don't believe I have ever had a QSO with a Cuban touching two wires together.

>I fail to see how someone who doesn't know Morse code could ruin CW
>QSOs since he wouldn't be operating in that part of the band.

I routinely have my 7040 kHz QSOs ruined by QRM from non-CW stations. On what basis can we determine that these operators could not ruin my QSOs because they know Morse code?

OOOPS!! I gotta correct my own correction.

Actually, in 1963 the license classes in the USA were: Novice, Technician,
Conditional, General, Advanced and Extra. Of course a Conditional was a
"by mail" General, but the FCC thought it was important to differentiate
between hams who had taken their tests at an FCC office and those who
hadn't.

In fact, there were two kinds of Technicians back then - those who had
taken the test at an FCC office (their licenses read "Technician") and those
who
had taken the test by mail (their licenses read "Technician (C)" with the (C)
standing for "conditionally granted").

In early 1965, shortly after Ed got his start, the US license numbers looked
like this:

Extra - 3,683
Advanced - 39,928
General - 101,217
Conditional - 40,529
Technician - 58,546
Novice - 13,930

Total - 257,833

If there were fewer hams today than in years past, I imagine you would see the connection between activity and the number of hams...

>Besides, growth is actually way down over the last few years, as a
>percentage of the population(ignoring the spurt surrounding
>restructuring).

That is flat-out incorrect. In the first place, it is a very weak argument to say that ham radio is becoming irrelevant because it is not growing as fast as it has sometimes done in the past. Pretty weak indeed. Second, the percentage of US hams vis-a-vis the total population is increasing, not decreasing.

MURS must be a very ineffective service if you have to resort to such distortions in order to defend it.

Is there a newsgroup or mailing list where I can go do undo some of the damage you are inflicting on MURS, or is it so unpopular that no such things have sprung up?

>I told you - primarily it has to do with some kind of misguided
>superiorty complex; and secondarily it has to do with hiding the fact
>that the VHF/UHF bands are going virtually unused.

Of course, the fact that the VHF/UHF bands are not going virtually unused doesn't seem to cloud your fantasty.

You don't think all this discussion is going to give anyone ideas, do you? Of course, I can understand why you don't want them to use amplifiers so you have no choice but to teach them misinformation that amplifiers don't work on VHF and up.

Can you point me to any newsgroups that discuss MURS so I can correct this misinformation? Or is MURS so popular that it doesn't need a newsgroup? Yeah, that's it... sure. MURS is more relevant and popular than ham radio that those using it don't have to have a newsgroup because they can all talk together on the MURS channels. THAT's the ticket!

>OK, given Part 97 and all referenced documents, recommendations,
>and specifications, WHAT IS WORD RATE IN MORSE ACCORDING
>TO REGULATIONS?!?

>Absolutely NOTHING in Part 97 specifies WORD RATE.

Absolutely nothing except:
SUBPART F-QUALIFYING EXAMINATION SYSTEMS
ï¿½97.501 Qualifying for an amateur operator license.
Each applicant must pass an examination for a new amateur
operator license grant and for each change in operator
class. Each applicant for the class of operator license
grant specified below must pass, or otherwise receive
examination credit for, the following examination elements:
(a) Amateur Extra Class operator: Elements 1, 2, 3, and 4;
(b) General Class operator: Elements 1, 2, and 3;
(c) Technician Class operator: Element 2.
ï¿½97.503 Element standards.
(a) A telegraphy examination must be sufficient to prove
that the examinee has the ability to send correctly by hand
and to receive correctly by ear texts in the international
Morse code at not less than the prescribed speed, using all
the letters of the alphabet, numerals 0-9, period, comma,
question mark, slant mark and prosigns AR, BT and SK.
Element 1: 5 words per minute.

>The morse character rate could be sent at anything from 5 to 50
>WPM per character and still keep the "conventional" word rate
>(5 characters plus a space) at "5 words per minute." All legal
>and per the law...because the law DOESN'T SPECIFY WORD
>RATE.

Yes, Farnsworth spacing is legal because the regulations give the VE teams the
authority to make the judgement on how the applicant is to be tested, as long
as the word rate is 5 wpm, as per the regulations.

Perhaps you intend to say that the regulations don't stipulate a character
rate? You would look a bit less foolish being wrong if you stopped yelling and
just took defeat gracefully.

>Those who are already licensed will see nothing wrong with an
>incomplete law. They may not dare challenge it for fear of being
>re-tested.

Not me; the only reason I wouldn't want to be retested is that it would be an inconvenience to have to show up at an exam session. After my unfortunate incident in Boston, I think I have already paid those dues. :-)

stewart,
It's not progress you're talking about, it's
only change. Change, just for the sake of change
is one of the stupidest ideas going. If your ideas
had any merit, that would be different, but they
don't.
As to the code speed reduction, how would you
possibly know what my feelings are about it? I've
never expressed them to you, or this NG. If you
knew what they were/are, it might suprise you.
And what new 'novice' class are you talking about?
The one you proposed which was rejected, or did
something happen and no one told me about it? I
think you're mixing fantasy with reality Stew.
Do I have faith in my fellow Americans? Yes I
do, but what has that got to do with what we're
discussing? Just more 'smoke', and trying to focus
on a totally unrelated topic. You've really got that
'politician two-step' down almost pat!
'Doc

PS - I still think you need help Stew baby...

Of course they are physical. I'm not talking about hating an abstraction.
I'm talking about personal taste. Some hams hate Morse code like I hate
cream style corn. If I had to eat cream style corn in order to be a ham,
I wouldn't be a ham.

The FCC responds with a resounding "YES!" That part is already a done deal.
Nocode techs are even allowed to use CW on VHF/UHF.

Note that you are objecting to HF hams who know Morse code at a 5wpm
level and also note that HF hams who don't know Morse code at all
would be less disruptive, according to your logic.

Well I dont know Stewie, but 5 Truck Drivers left here yesterday with 5 VHF Delta S Radios that operate at 110 Watts, they had alot of Questions about installing them in there Trucks. I guss there going to use them as Monitor Rx. They also picked up 5, 6DB Mobile Ants to mount on there Trucks.
They Claim they work better than Scanners. They also said to let them know if anymore come available.

Are you talking about ham stations or commercial stations? If ham stations,
weren't all of them required to know Morse code?

A Morse code requirement requires every HF ham to use the Morse code "mode"
first before using any other mode. Dick denied that fact.

Why do you think that more power is inevitable? There are a lot of
other ways to transmit RF without a license, yet illegal power is
commonly used in only a few of those. For CB and maybe Part 15 FM
in the broadcast band illegal power use is not uncommon, but we've also
got much heavier use of (off the top of my head) cordless phones, 802.11
devices and even cell phones and you almost never hear about people
using illegal amplifiers for these.

Why would MURS users be more likely to behave like the former rather
than the latter? (This question is not rhetorical, I have no opinion
about MURS one way or the other.)

You might do a web search for "T-E Systems."

They make high power amps for VHF/UHF ham
applications. They may have an amp for the
450 MHz FM ham band that makes that much
power and only requires a few watts of drive
power. Hopefully you have an early FRS radio
that had the potential to make more than 3/4
of a watt. If not, you'll have to start with a low
power amp, see what the output is, and then
buy a suitable high-power amp designed to deal
with the amount of drive power that the low-power
amp produces.

Good luck.

But it does have a basis in history, and human nature, together with a declining morality standard, and a general "up yours" attitude.

> The motivation for spreading the rumor
> is somewhat complex - but, the main motivation appears be to maintain
> some kind of "superiority complex" these hams harbor over "CB users".

And how does one do that? Whether or not one operator is "superior" to another would be easy to discern based on their overall achievements and their dedication to their respective service. One does not need to promote a superior attitude. The facts will speak for themselves.

> A secondary motivation seems to be to stop the growth of these
> wildly-popular radio services - as ham VHF/UHF usage has continued to
> decline in recent years, these services are rapidly growing in
> popularity.

Why would hams want to purposely halt the growth of another radio service? For what gain? As a radio hobbyist, I welcome any and all outlets for experimenting.

>
> There has never been a reported violation involving amplifiers on any

How about the "entertainment" that you spoke of, of "squashing" other stations? How about for inproving their distance? How about the same motivation that pushed most high powered Cbers, and that is the "king of the hill" syndrome?

> allowing these individuals to communicate great distances(sometimes
> 1,000s of miles when the "skip is in").

So you think that "skip" is the sole reason that CBers run amps? You obviously haven't spent much time on CB in the last 20 years. When the "skip" is running, you can work the world with 10 watts. If the skip isn't running, you can't work the next state with 5,000 watts. (Unless, of course, the next state is less than 150 miles away).

I'll give you a clue. Amp usage on CB is about two things, either being heard above the next guy, or preventing the next guy from overrunning you. It's nothing more than a competitive spirit gone horribly wrong, and there's no evidence to suggest that this same attitude would not cross over to any other band available to these same undisciplined people.

> A side result of this
> "culture", has been that these individuals resort to a kind of
> "entertainment" by jamming smaller-powered stations ("squashing") when
> the "skip is out".

A "side" result? I'd say that this is probably 50% of the activity on CB during any given day. Just listen to Channel 6.

>
> However, on VHF/UHF frequencies, greater than Line of Sight(LOS)

Sure there is. The attitude of being the big dog on the block is still as strong on 154 Mhz, as it is on 27.

>

> sewers, there are no high-powered amplifiers on GMRS/FRS/MURS.

One other thing is needed for this to happen; popularity. And then there has to be someone willing to market these accessories to the people that want them. FRS has deliberately been manufactured and marketed to discourage amp usage, or modifications in general. MURS is still a service in its infancy. It hasn't really caught on yet with the yahoo crowd. As long as there is activity on 11 meter CB, what is the incentive to move to MURS?

As long as these VHF/UHF services are marketed as short range, mostly handheld units, there will be little incentive for the "big guns" to set up shop. But give it time. Start offering fancy radios, cheaply, with lots of knobs and gadgets, and billy bob will be on those bands eventually.

Well, if you think about it, it just makes sense to do it that way. You are creating a service for non-technical people (as evidenced by the non-license requirement), and yet expect them to calculate their transmit power plus antenna gain and subtract feedline loss? Add to that that the radio would then need a means to adjust the power until the ERP fell into spec. It was a quagmire to deal with, at ERP levels.

But it does open up a bunch of possibilities, running 2w into stacked 22 element yagi arrays.......

Dave

While I'm pretty much a QRP-type operator, I really don't have any
argument with anything you are saying. But, all of this stuff really
doesn't apply to the services or the discussion at hand. The point
is, there have been ZERO actions by the FCC against any
individuals/entities for running high-powered amplifiers on the
MURS/GMRS/FRS frequencies; and there is(and never has been) the same
type of incentive to run these things, like there is on 11m. That's
all I'm saying.

What you are failing to see is that rarely do two radio operators
operate strict line-of-site. Most, if not all radio communications
using VHF and UHF radios are sending a signal to the other radio
through vegitation, buildings, cars, people, etc!

Even when I am taking to repeaters on high locations, I have to
contend with objects between me and the repeater antenna. Higher
power DOES help you to overcome these obsticles.

When I use my FRS radios, I rarely can see the person I am talking to.
DO YOU?

>
> It was a hypothesis based on personal experience and may or may not apply to
> the majority of hams.

That means it only applies to you and people who react the way you do.

But good on-air behavior is a general rule among CW-using hams, not
just among CW-using hams whose hands shake when they are angry.

> Just how many hams do you know who can send code when
> their hands are shaking in anger. I know I cannot.

Everyone is not like you.

> I assume there are many
> more hams like me. In fact, I would challenge anyone to send decent code when
> their hands are shaking in anger.

What percentage of CW using hams' hands shake when they are angry?

> > > I am not unique.
> >
> > Everyone is unique, even identical twins.
>
> Are you saying that I am the only human being whose hands shake when he is
> extremely angry?

Nope. Just that it's not a general rule for all hams. Good on-air
behavior is a general rule among CW-using hams, not just among
CW-using hams whose hands shake when they are angry.

>Get real.

I am real. You are trying to generalize your own behavior to all
CW-using hams.

>I would say it is extremely common.

Of course you would say that, but your saying it does not make it
true.

>
> > >I was describing how hams like
> > >me react to emotionalism while trying to send CW or type on a keyboard.
> >
> > That's fine. You did not make that clear in your original description.
>

>
> Then why did you say "it has no basis in fact"?

Because your single example does not necessarily generalize to all or
even most CW-using hams.

> That certainly sounds like
> a denial and a refusal to accept reality to me.

The only denial and refusal to accept reality is yours.

>What I posted is 100% factual.

About yourself, maybe. Not about others.
>
> > Some people can send CW while they are angry and therefore can vent their
> > anger while sending CW. Same for keyboards. They simply control their behavior.
>
> And I wasn't describing people like that. I was speaking from experience and
> describing people like me. Sorry you refuse to accept that fact.

You don't have to apologize. Just admit your mistake and move on.

> I would
> estimate that people who can send CW while extremely angry are a small
> minority of the ham population.

Of course you would. But you present no proof or even credible
evidence.

By the same logic, shaking hands should prevent hams from holding a
mike and
pressing the PTT button.
>
> > Your hypothesis of general behavior by hams on CW is not proved by your
> > description of yourself.
>
> You are mistaken. It was not a hypothesis of general behavior.

Yes, it was. You wrote that CW was incompatible with bad on-air
behavior, or some such. That's a general rule.

> It was a description
> of hams like me of which there must be a considerable number.

Nope. Just you.
>
> > >There is no possibility of a mistake.
> >
> > Are you perfect? If not, there is always the possibility of a mistake.
>
> I am perfect in reporting my capabilities while under emotional stress.

No, you are not.

> There is *NO* possibility of a mistake.

There is always the possibility of a mistake.

> I am an ordinary prudent man.

Not if you claim infallibility. There's a guy in the Vatican you
should talk to.
>

>Are you talking about ham stations or commercial stations? If ham stations,
>weren't all of them required to know Morse code?

I presume they are ham stations. Some nations do not require that their
citizens pass a Morse code test for HF access, treaty notwithstanding.

Even if we know they passed a code test, all we know is that they met the
minimum standards for that exam once; there is no certainty at all that they
know the code today. At 5 wpm, it is likely that the skill will be forgotten if
not used.

>using illegal amplifiers for these.

There are a number of WISPs that have been bragging on the ISP-wireless list
about their use of amplifiers past the EIRP limits in the Part 15 rules.

>Why would MURS users be more likely to behave like the former rather
>than the latter? (This question is not rhetorical, I have no opinion
>about MURS one way or the other.)

I think that if the MURS users tend to be consumers rather than radio
hobbyists, they may well not use amps, on the whole. Most other Part 95
activities have tended toward the hobbyist use, and that certainly is the way
Stew is promoting it.

I am not saying that the use of amplifiers is inevitable, although it doesn't
take much thought to figure that at least a few people will. Stew is saying
that it is impossible because no MURS user would ever do so. I buy that even
less.

Nope, they are very useful services... that would be like tearing up
the beginnings of the Interstate Freeway system, because of a few drag
racing gangs (known as the CBers and Freebanders) on Mulholland Drive
in the early 60's.

Quite the contrary - these services are reaching saturation, and need
to be EXPANDED. Another possibility is to release some of the
pressure on these services by allowing family members and friends to
easily get a ham license by opening up the 1.25M ham band to a New
Novice NoCode Voice Class License.

> now?

For some of the same reasons they get used on 11m. Not that the operator wants to work DX, on the contrary they want to be king-of-the-hill. Some of these poor folks have such a huge desire to control other people that the only way they can find to do it is by "taking control of a local frequency or channel", as with CB radio. They maybe the low person at work etc., but when empowered by a huge amplifier, that allows them to determine who talks and when or they get jammed, gives them the brief feeling of being in control - i.e. the Boss. How many times on 11m have you heard some channel control freak say " you're not going to talk on MY CHANNEL" followed by a dead carrier, loud music etc? Right, too many times. In short its an ego trip for some of the idiots, and has nothing to do with logic and V/UHF propagation facts. The bigger the amplifier all the better to key over other lesser powered stations in their mind.

Billerica is just a fly speck of a town on the map, and about half way between Boston and
Lowell. I would be more interested in what is happening in the likes of Boston for example.

> That means it only applies to you and people who react the way you do.

Yep, which is probably the majority of coded hams. Choose 100 coded hams at random and provoke them until their hands are shaking from anger. Do you really think many of them could send decent code while their hands are shaking in anger? Get real!

> What percentage of CW using hams' hands shake when they are angry?

All of them who are angry enough and those are the hams I am talking about. If their hands are not shaking it simply means they are not angry enough and fall outside the bounds of my statements.

> Your original posting indicated it was a general rule.

It was obvious from my original posting that I was describing my personal reaction. If you didn't find it obvious, it means you didn't believe my earlier posting where I said *ALL* of my postings are my personal opinions based on my personal experience. If I said I weigh 200 pounds you would argue with me. You would argue with a fence post.

> >What I posted is 100% factual.
>
> About yourself, maybe. Not about others.

Nobody else in the world has shaking hands while experiencing extreme anger? Shirley, you jest.

> You don't have to apologize.

I feel I have to apologize for your refusal to accept facts.

> By the same logic, shaking hands should prevent hams from holding a
> mike and pressing the PTT button.

You are simply wrong and that's an absolutely ridiculous thing to say.

> > You are mistaken. It was not a hypothesis of general behavior.
>
> Yes, it was.

No, it wasn't. I am not stupid enough to do such a thing. All it takes is one example to prove that you are wrong.

> > My hypothesis is that hams like me cannot send CW while extremely angry.
>

> That's not what you originally wrote.

That was the meaning of what I originally wrote. Sorry you misunderstood.
You can always save a lot of time and trouble if you simply ask what I
meant instead of drawing some half-baked irrational conclusion.

> > That is a fact not subject to question.
>
> All facts are subject to question. That's what made Einstein a genius.

Nope, facts are absolute. Einstein didn't question facts, he questioned
beliefs.

Why bother? All you want to do is spam these newsgroups with your MURS crap.

This is amateur radio, CB radio, or FRS, depending on the newsgroup cross-posted to, not MURS.

MURS has no purpose. It was an FCC wet dream to clean after a radio manufacturing mistake - and it will never be more than that.

Leleand, lets cut to the chase, if the cop was using his ht as a work radio, he is wrong, period.
> bandm they do it all the time, for various "reasons".

And some of them may in fact be legitimate depending on the Ham. Some do have license privileges to transmit on other than the Ham Bands.

We're not talking about mars or caps here. the thread was typical ham operator, going out of band, using a murs, or up here in the GWN, one of the lpu freqs. Wrong , of couse, bothering anyone, no. BUT it does happen, something I can say I have witnessed. and done the odd time. Why, hmm, not enough radio's at an weekend event, dial up the handi to the radio's being used, and off we go. Wrong, of course, hurting anyone, no. He're another example, I was working with another ham and we needed radio's, we couldn';t very well use 147.555 for our purpose, being commercial, so we used 151.055, an lpu freq, with no tone to ensure we didn't bother any of the local security guards, et c.
I'm not trying to call you out on this, just make you aware that just becuase hams have thousands of freqs available, doesn't for a minute mean they won't wander. I will conceed that many hams take a dim view of this, but there are plenty that don't.

Sincerely

Dan

In one case I remember seeing a Royal Oak city cop, in full uniform with side arm, sitting at a table in a small restaurant on Woodward Avenue with a very plainly obvious Yeasu HT. His heavy duty Motorola radio was nowhere to be seen. Was he a Ham? I don't know because I didn't ask, and I didn't see him making a transmissions with it while I was there to check for a callsign.

I have seen court officer using the yeasu ht, I think it's a tad easir to get ear plugs for that the typical Motorola. As long as he's only monitoring, there no harm being done.

The 1.25M band is already open to Novices and to NoCode licensees.

I respect all the points you have made. However, because of the fact
that we already have had GMRS and FRS for a great number of years(and
GMRS does allow external antennas, and does share freqs with FRS, and
will allow you to run easily obtainable Part 90 eqpt.), and these
types of antics are not going on - I stand by my basic premise that
the CB culture is FIRMLY ENTRENCHED and QUITE HAPPY on 11m... these
'ol boys can't just "reach out and knowingly squash somebody" for an
extended period of time over in the next county - now matter how many
WATTS they pump out. Oh sure, they could squash the conversation of
little Billy or Susie on FRS for about 30 seconds, while they were
passing thru town, or interfere with a business inventory being taken
on MURS for a minute or so - but that is NOTHING compared with the
HOURS OF PURE ENJOYMENT these CLOWNS can get on CB.

I have to disagree Cecil! I certainly don't want to force anyone to use Morse Code on HF, but I support Morse Code testing. Although it is almost certain that there are hams who feel that way, it is pretty hard for me to go from there to "all hams who support code qualification feel this way".

I've told you a million times, don't exaggerate! 8^)

Oh, COME ON, these people are also running high gain antennas on bands
not INFESTED with the level of noise present on 11m. With the type of
antennas these 'ol boys typically run, they need the watts to be heard
thru all the noise, and to overcome the ineffeciencies in their
antenna systems, and to communicate with the other good 'ol boys
running a similar power level and antenna system at the other end of
the link.

> >However, on VHF/UHF frequencies, greater than Line of Sight(LOS)
> >propagation is a fairly rare occurrance - so there is no initial
> >motivation for an average individual to run a high-powered amplifier
> >on these frequencies.
>
> Right, CB'ers would NEVER think of running amps on FRS.......

Of course they are going to try to extrapolate their knowlege of 11m
to 70cm... but IT DOESN'T WORK - because of LOS limitations, because
of the increased imporatance of transmission line loss and antenna
gain, and because of the fact that nobody else runs a
similarly-powered system, the clowns get NO REASONABLE FEEDBACK, and
so they slink back to the 11m slimefest, where they can interfere with
conversations of thousands over a five county area, instead of the
sheer boredom of only being able to interfere with little Billy or
Susie's conversation down the block for a few seconds - who just end
up putting on CTCSS, and don't even know that they are being
interfered with. There just isn't the same THRILL.

This is why we haven't been seeing this kind of activity on
GMRS/FRS/interstitials. If this high-powered amplifier activity were
REALLY occuring on these services, wouldn't you think the UHF and VHF
amps would be being sold right there alongside all of those HF amps at
the truckstops?

>and
>just took defeat gracefully.

Let's clear up all this confusion for once and all.

There IS a standard definition of International Morse code. It may not be in Part 97 but it does exist.

The following is a simplified paraphrase, but it is accurate and correct.

Here it is:

- A "dot" is one time unit long.
- A "dash" is three time units long
- A "character" is any single symbol that is encoded (letters, numbers, punctuation marks, prosigns)
- A "word", for the purpose of speed/time definition, is 5 characters and the associated spaces
- Spaces between dots and dashes inside a character are one time unit long
- Spaces between characters are three time units long
- Spaces between words are seven units long.
- Speed for plain language is defined by how many times the word "PARIS", properly spaced, can be sent in one minute. "PARIS" and the word space following, is exactly 50 time units long.

Thus, at 5 words per minute, the basic time unit is 240 milliseconds. The word "PARIS" would take 12 seconds to send.

"Farnsworth spacing" is simply an alternative definition of the spaces between characters and words. It was developed as an aid to learning the code.

Most VEs use "Farnsworth spacing" in the 5 wpm tests. However, any examinee who prefers "regular" 5 wpm Morse can be tested that way upon request. Thus, there is absolutely no problem with the way the VECs conduct the tests.

>>Those who are already licensed will see nothing wrong with an
>>incomplete law.

I think the exact definition of Morse and Farnsworth spacing should be part of the law so there is no confusion among the ignorant.

>>They may not dare challenge it for fear of being re-tested.
>
>Not me; the only reason I wouldn't want to be retested is that it would be an
>inconvenience to have to show up at an exam session. After my unfortunate
>incident in Boston, I think I have already paid those dues. :-)

Ever since I got my first license 35 years ago, I've been ready for retesting, written or code. Current tests, old tests, whatever. Bring it on!

> run 100-200 watts on 27mhz, but ok to run 1500 on 28 and 29 ?

The biggest problem is the sort of "arms race" mentality that has
developed. It leads to a kind of "nuclear winter" in which the whole
band is so over-saturated with RF energy, that nobody except the ones
with the largest amplifiers can cut thru the noise to communicate.
Things are ESPECIALLY BAD on the HF bands(like 11m CB), because of
skip - as the noise gets propagated ALL OVER THE WORLD!

I would assume the same problem holds true on the HF ham bands to a
certain extent. However, hams are taught to use only as much power as
necessary to maintain a contact(I don't know how many follow the rule,
and how far they will go in interpreting it, but I'm going to assume
most follow it to a certain degree - although it isn't the "prime
directive" of each and every ham).

I see no such saturation of FRS. Another family and mine often
travel on weekends and we use FRS between cars. No saturation
encountered at all...much less even another occasional user
on the same channel. This is in the northeast, probably the most
densly populater area of the country.

Cheers,

4761. Call for a cease fire on the GMRS/MURS Amp issue.

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-30 02:14:15 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0205291814.23d8e365@posting.google.com>
Source record: 44030
Cross-posted to: rec.radio.amateur.policy,alt.radio.family,rec.radio.amateur.misc,rec.radio.cb

I'm beginning a 1 week "Internet cease-fire" on this issue. After that, if no further claims of "High-Powered Amps on GMRS/MURS" are made - there will be no further need to defend against these rumors.

You see, it is kind of a chicken-and-the-egg issue... Amps on GMRS/MURS do no good, as long as there aren't enough other people with amps out there... and there isn't a market for amps, until there are enough amps out there... and without a market for amps, there aren't enough amps out there...

What few morons who have tried to use amps on GMRS up to this point have surely gotten such rotten results that they most certainly have long ago abandoned these "experiments".

Now - as long as people don't go around spreading rumors that there are amps on MURS/GMRS(which could encourage the growth of this "rotten egg" syndrome), then we can all live happily ever after, in a low-noise environment.

As for me, I'm going QRP on this issue...

> 73,
> Ed Hare, W1RFI

Ed, the VE teams are not given that authority. I think you meant the VEC give their teams their marching orders. For instance, Dick/W0EX's rogue ARRL VE team could send at a charater rate of 20wpm, with a word rate of 5wpm, and still be what you say is per regulation. Is the ARRL VEC going to allow that?

None-the-less, the text of part 97 clearly states "international Morse code" and not Farnsworth code. Morse code has a very specific dot dash ratio that is violated in Farnsworth code.

"Don't shoot me, I'm only the messenger," and all that other Dann Finn abdication of responsibility crappola.

73, Brian/N0iMD

Ed, you may disagree, but 1,500 watts of ionizing radiation doesn't sound like an entry level license to me. I think an entry level license should be introduced that has limits on power per the rf hazard chart in Part 97. Then you may eliminate a portion of the requirement for knowledge to perform the safety analysis.

Did you ever live in South Florida? I did in the 70's, 80's and early
90's. Are you implying that I am BS-ing? Says a lot to some of us about
you; otherwise it doesn't really matter. In any case, Sunday mornings
were and probably still are best for this sort of activity. It's on 40m,
best in South Florida of course where we were about 250 miles from
Havana. They have weak signals but a few weeks ago they were even strong
coming into North Carolina. Sometimes I think they are not always
official Cuban "hams". The one that sounded very much like he was
touching two wires together said he was at a railway station where I
suppose they should have had a straight key but this guy sure wasn't
using one. Try getting a contact as interesting as that on SSB or your
beloved digital modes! That, by the way, can be construed by some as
being "real" ham radio. It was for me. I have no history of BS-ing you
RFI, nor do I need to.

Ed, you've read it from me previously, but just because you're from the ARRL
I'll go over it again.

1. Full license: "Amateur" to present General standards.
2. Limited license: "Limited Amateur" to less than Technician knowledge.
Limited in power to the rf safety chart or 200 watts, whichever is less, No
repeater trustee privs, No 3rd party traffic. All bands, all modes.

Ed, I'll give you a chance before I declare that you have a double standard
or engage in cronyism.

Did you say of Dann Finn in his several diatribes concerning, "Don't shoot
me I'm only the messenger, I only observe and Report...." that, "You did
not only observe. You interpreted and you reported. Most hams would
disagree that your interpretation applies to most of ham radio. I do."

Or did you agree with Dann Finn?

I agree with Ed. It's not the power that kills you it's the voltage.
120V into a 15W power supply is as lethal as 120V into a 1500W power
amp, and if it kills you, 120V mains is just as bad as the 3KV side of
an HV XFMR.

On the other hand, high voltage could serve as an active filter, you
know, for NCT hams who have no business on HF. This could augment
Brian's Actuarial filter and support the Darwinian survival of the
fittest theory that I have championed elsewhere in this thread.

Ed, are you saying that cronyism, double standards, cliques, intolerance for
newcomers, and license class bigotry do NOT occur or exist in amateur radio?

I do not believe that it exists in MOST of amateur radio, merely that it
exists, and it is ugly wherever it is found. And it is certainly found on
RRAP.

Aw, come on Ed, you did not read what I was saying. I was not talking about ham radio people, I was talking about how humanity in general reacts in the face of limited amounts of information. Humanity in general implies normal, typical people in the populace. It makes no difference whether you think hams fall into the category of normal, typical people because they are such an insignificant subset of all of humanity. This means that the inane attempts of yourself and others to turn ham culture into accepting no-code are rather futile, even if it works. Humans like stratification (except Marxists like Brian of course, heh heh heh).

If you are a ham, members of the general public will assume that you know how to use a code keyer and beep all day long. If you can't, then members of the general public will think you are not a real ham but perhaps a CBer, whom they know cannot send/receive morse code like hams do. And I am an expert at knowing how members of the general public think about hams because I am a member of both.

Don't shoot! I am just the messenger!

OK, I will play you kid's game but for just a minute: Your straw man
question would exclude KR4AJ but it would not necessarily be an amateur
service of only one. But now that I cluttered the bandwidth with
answering a stupid question, please make your point. Why 70 wpm? Why do
you guys always go to the extreme side of every situation? For you it's
either 70 wpm or no code at all.

I was merely suggesting a default more on the side of excellence, say,
13 wpm for EXTRA (keeping 5 wpm no-code for general). Someday I will
give you some personal examples of how I witnessed substantial code
usage outside of the US.

I don't know where you guys come up with that extremist 50-70 wpm crap.
That is as extreme on one side as no-code is on the other. Try the middle.

So Comrade, what do you think of the more reasonable path to preserve
excellence?

Holy Shit! 1.5KW of *ionizing* radiation! I'm sure you understand that
ionizing radiation is radioactive radiation such as they type one might
create with U-235 in Nuclear power plants and atomic bombs.

Gosh, was I supposed to put lead shielding around my power amp?

GULP! I didn't.

The Morse code requirement forces all HF hams to simulate the CW mode
receive operation before allowing them to use any other mode.

Some people say 5 wpm is equivalent to "no code". If you accept that,
then we used to have an "all code" "no-code" license. A license where
the only permitted mode used to be CW.

:-)

No it wasn't. Here it is again from my original posting:
"If I am angry enough to utter obscenities,
my hands are shaking too badly to even send Morse code or type on a
keyboard but I could certainly squeeze the PTT button and scream into
the microphone."

What is it about these personal facts that you find so difficult to accept?

> >> > My hypothesis is that hams like me cannot send CW while extremely angry.
> >>
> >> That's not what you originally wrote.
> >
> >That was the meaning of what I originally wrote.
>
> But it's not what you originally wrote.

Yes it is, Jim. Here's my original posting: "If I am angry enough to utter
obscenities, my hands are shaking too badly to even send Morse code or type
on a keyboard but I could certainly squeeze the PTT button and scream into
the microphone."

What is it about "I", "my", and "I" that you do not understand?

> How can a reader know that what you wrote is not what you meant?

What I wrote *is* what I meant. Here it is again:
"If I am angry enough to utter obscenities,
my hands are shaking too badly to even send Morse code or type on a
keyboard but I could certainly squeeze the PTT button and scream into
the microphone."

Are you having comprehension difficulties?

> >Nope, facts are absolute.
>
> That's just a belief of yours, not a fact.

From Webster's: "fact - something known to exist or have happened"
It is a fact that my hands shake so badly when I am extremely angry
that I cannot send copyable Morse code. Why do you think you know
more about my psychology/physiology than I do? You *are* waxing
omniscient again, aren't you?

> >Einstein didn't question facts, he questioned beliefs.
>
> Whatever.
>
> Using that definition, it's clear that your belief that you are stating facts
> is mistaken.

The following is a factual statement from my original posting:
"If I am angry enough to utter obscenities,
my hands are shaking too badly to even send Morse code or type on a
keyboard but I could certainly squeeze the PTT button and scream into
the microphone."

What is it about these *facts* that you cannot understand and accept?

I suspect that the "minimum power needed for the contact" is
observed by hams at the "order of magnitude" level. Can't reach that
interesting DX on 20 with just the 100 watts your transceiver
puts out, well, fire up the kilowatt linear.

Yeah, I know. But they don't realize that people use ham radios in their vehicles. The movies always have shown trucks with CB radios, therefore, it is the conventional wisdom that trucks contain only CB radios.

By using the term default, this means to say that there is a fine line in the middle of no code, slow code and fast code. Many members of this group default to the left side (not political left) which is no-code. I am suggesting that we default closer to the middle (some code). To me it makes as little sense to default to the extreme left side (no code) as it does to default to 50 wpm (fast code). Going too far to the left is too far away from the standards of recent past. Too far to the right would be extreme, unattainable excellence. Going towards the middle is not excellence in and of itself, but it is more "on the side of excellence" which is all that many people are asking. That has been my suggestion, i.e., to default on the side of excellence, not to extreme excellence.

Ham radio need not be the Morse code olympics.

There are any number of "opened up" 2M mobile rigs running on MURS. You can find them advertised as "MURS Ready" on EBay any time you like. Just did a search on "MURS" and found 50W Icom IC-2100H available, with prominent mention that it would work on the "new MURS" CB service.

The Class D Citizens Radio Service was never intended for hobby or
experimental use. It became that way by default. Because of
laziness as a resault of a well-known-inside pizzing contest between
certain managers at the FCC - it was easier to just nake thw rules
conform to what the outlaws were doing than to enforce them.

The GMRS and the FRS and the MURS were never intendced to be for
hobby or experimental usage. But alas, the same throwing-up-of-the-hands
that overcame the FCC with the CBRS overcame them for these, too.

FRS was a pet project of Radio Shack to sell lots of junky
throw-away radios and MURS was a pet project of EF Johnson to sell
more JobComm radios than its competitor could sell Color-Dot radios
which both were selling when a Business Radio License was required
for their usage. But the outlaws walked into CostCo or Wal-Mart,
bought the radios and used them unlawfully and the FCC again changed
the rules rather than enforced them.

If you think that these companies had the good intentions of "making
communications more accessible for the average person", I have a bridge
for sale that may be of interest to you....

Wanna do hobby? Wanna do experimenting? Get a ham license....it's
much easier now than when the CBRS and GMRS were first founded.

Yup. Don't they understand that the higher the power and the greater the range, the more other types of electroc crooks can ji-hack their signal?

A white-collar (radio) criminal may be of higher economic status, better educated, and deal with more sophisticated schemes, but underneath all that you will still find a thug.

Joe:

One particular R/C aircraft design, the TeleMaster, was designed
specifically for the purpose of stringing lightweight leaders used to
precede heavier cables used in the construction of bridges. It is
also popular for carrying cameras and video equipment into the
air; my father and I have done so with Telemasters for years, with
pretty good success. The only thing I don't like about them is with
their light wing loading and Clark-Y airfoil, the darn things are almost
impossible to land where you want them to.

>> continents on HF using milliwatt QRP transmitters.

>Oh, COME ON, these people are also running high gain antennas on bands
>not INFESTED with the level of noise present on 11m.

You may have been able to get away with such misinformtion on the MURS groups until your deciding to try to promote MURS here with misinformation caused a number of hams to join in the MURS discussions, but you can't expect to tell such falsehoods here and get away unchallenged.

Many QRPers use modest antennas on HF. My 250 milliwatt worked-all-states was done using either a ladder-line-fed 40 M dipole and antenna tuner or a 20-meter ground plane, both up about 40 feet. That 1-milliwatt QSO to Europe was made on a ladder-line fed 80 meter dipole strung between the buildings.

Such misinformation in one area is probably causing people to doubt your information in all areas.

With the type of
>antennas these 'ol boys typically run, they need the watts to be heard
>thru all the noise, and to overcome the ineffeciencies in their
>antenna systems, and to communicate with the other good 'ol boys
>running a similar power level and antenna system at the other end of

All the more reason to run amplifiers. I can respect your motivations in trying to tell MURS users that amplifiers won't work -- if you can get them to believe you, that would help slow the use of amps, but spreading misinformation about Amateur Radio, QRP, propagation, capture effect and a host of other related subjects is making your cure worse than the disease.

Or is it possible that you really don't understand these things? If so, spreading "information" on a subject for which you have little real knowledge

is nearly as bad.

>
>Some people say 5 wpm is equivalent to "no code". If you accept that,
>then we used to have an "all code" "no-code" license. A license where
>the only permitted mode used to be CW.

Robert:

A 5 WPM code test does nothing more than test basic character
recognition. This is adequate for someone who is to be licensed
at the entry level, particularly if he/she will be starting to make
on-the-air QSO's in CW, and thus progressively increase operating
speed and accuracy. However, as a maximum code speed test,
the passing of which results in the granting of full HF privileges,
it is sadly lacking, since there is no incentive for the prospective
upgraded amateur to increase his code skills beyond this level.
And experience has shown that without this incentive, only a tiny
handful of amateurs ever will pursue the Morse/CW mode to a
useful proficiency level (13 - 20 WPM).

Therefore, while the old Novice class was an "all code No code" license
as you call it, it was the *beginning* of the license structure, not the end.

>must be wrong with your statement.

Even in my QRO days, I would say that having my 100-watt signals QRMed on 40 meters are a reasonably regular occurrence. I find it hard to believe that you have never experienced that yourself on 7040 kHz. Are you pulling my leg?

As to my own statement, most of my work on 7040 kHz is being done with power of 1 watt or less. I believe that some of the digital signals that are also there originate in Europe. It doesn't take a whopping signal to QRM a 1-watt transmssion.

Do you still think that there is something wrong with my statement, or do you feel better now?

you post. Nor do I remember everything I read.

What does my employment at ARRL HQ have to do with your decision to restate
your views of a two-class classless Amateur Radio?

>1. Full license: "Amateur" to present General standards.
>2. Limited license: "Limited Amateur" to less than Technician knowledge.
>Limited in power to the rf safety chart or 200 watts, whichever is less, No
>repeater trustee privs, No 3rd party traffic. All bands, all modes.

I assume that if the FCC thought this was a good idea, they would have made the
rules change. I think that many hams would disagree that all priveleges should
be granted to a "General" level of knowledge. If you want this idea to be well
accepted, you may have to adopt the principle that there be no reduction in the
level of knowledge required to reach the highest pinnacle. In that case, all
you have accomplished is to make it one pretty big step.

Do you really feel that Morse code is so useless that there is no incentive for people to learn to use it beyond 5 wpm?

It's the way you're using them. On the highway, with the limited range, you WON'T find many other users. Even around Boston. (I'm below Worcester.) I've used FRS between multiple cars to the cape and to ski trips, and never run into someone on the highway.

On the other hand, I took FRS on a motorcycle trip. And stops up north of Lowel found a couple of channels busy. On ski trips to Vermont almost every channel is so busy as to be almost unusable. Going to things like NHRA (big events with top fuelers) FRS is one big party line. Even with PL.

Hey, even in the summer, when I was at the summit of Wachusett, I found about half the channels active. A lot from there, but I was also getting some pretty distant stuff. One conversation was hikers. Sounded like they were on Monadnock.

No arguement there. You are correct, but it doesn't change history. Be
that as it may, the CB band, the FRS band, and I'm sure the MURS band
are open to be used by THE PUBLIC, for whatever usage they seem to see
fit. GMRS is also (sadly) heading down the same road, now that
blister-pack GMRS radios are available to clueless people that think
they are just higher powered FRS radios.

They were never intended, but nonetheless are, the cheap and dirty way
to play with radio without taking a test.

>

That seems to be a common thread for the FCC. "If you can't beat 'em,
change the rules". Had the FCC's presence been stronger, 25 years ago,
we wouldn't be having this conversation. But it's water over the dam

now.

>
> If you think that these companies had the good intentions of "making

> for sale that may be of interest to you....

Oh no, I'm far from naive. Any commercial venture has as it's primary goal, the advancement of their profits. Clever marketing types will look to find any new niche, that they can exploit for monetary gain. Why do you think companies like Uniden and Yaesu, made ham radios that (Wink wink) could be easily modified for 11 meter usage? That was no accident, and their sales demographics proved it, even though they ended up flooding the market with gear that was destined for illegal usage. But their bottom line was much better....

>
> Wanna do hobby? Wanna do experimenting? Get a ham license....it's
> much easier now than when the CBRS and GMRS were first founded.

Seems almost too easy doesn't it? Why would someone play arounf with services like MURS, and FRS, when ham radio offers so much more? The theory test is disgustingly easy these days, so there's really no good technical reaason why someone would not go the ham route.

But many seem to harbor a deep rooted hatred for hams and the service in general. This is likely due to bad exposure to "stuffed shirt" types that feel that "real hams" operate DX on HF with at least 75% of all contacts on CW. The bad taste left has turned away many prospective radiko hobbyists. Maybe that's why there's interest in these other services.....

I agree that there always will be some that have no desire to leave the
11 meter band. But there are also others that like to test new waters.
Many upgrade to ham radio. Many find other avenues.

In my opinion, the only reason that GMRS has stood the test of time, is
that the service was not (Until very recently), widely marketed to the
public in places like Wal-Mart. Gear for GMRS was largely made up of
converted business radios, which are fairly expensive, and not always
easy to find, unless you cruise around in the radio world. In other
words, you had a need.

CB was also not very popular before the 70's, when the mass media
coverage of the "convoy" phenomenon, catapulted CB into every household,
and many companies started cranking out radios and selling them in
places like auto parts stores and 5 & 10 stores.

What will ultimately kill GMRS is the increasing marketing of cheap
"bubble pack" radios, with the predictable resultant rise in illegal
activity. The FCC, will once again run rather than fight, and will most

likely deregulate the band, and that will be the final death knell for a once usable band.

> all I'm saying.

And this is where your reasoning is flawed. Because the FCC hasn't publically flogged someone for running excessive power on MURS or FRS, you assume that it isn't happening. If I were to apply that logic to 11 meter CB, I'd conclude that since there are only a handfull of people getting NAL's from the FCC, that there are only a FEW people running illegally there. Anyone that's familiar with 11 meters, knows what a crock that is. The FCC isn't going to bust someone unless they are causing interference problems, that bring the illegal to their attention. If you can run a few more watts on MURS/FRS, and no one notices, do you think the FCC would care, or even know?

On the other hand, there is a certain amount of circumstantial evidence that would suggest that there is at least the intention or interest in running higher power equipment on the FRS and MURS band. I see radio mods for ham VHF/UHF radios that specifically address usage on those respective bands. I see radios for sale that mention being usable on FRS/GMRS/MURS. I guess it's a major selling point to have a single dual band radio handle 2 meter ham, MURS, the marine band, 440 ham, FRS, and GMRS. So why mention it, if it wasn't a desired feature by some?

Higher power operation on FRS and MURS wouldn't be particularly noticable either, due to the band's propagation (or lack thereof). Would you be able to tell the difference at a glance, between a 2W MURS station feeding a 10 element beam, 500 feet HAAT from a 50 watt mobile on the same frequency? Descrete use of ham gear on these frequencies will not attract much attention. But once Billy Bob finds out, it won't be so descrete.

Dave

(SNIP)

Than't what I like about these ham
radio. The *easiest* way to start
a 2-terabyte-long multithread commentary
in newsgroups is make a PRO/ANTI-CW
message, or comment on illegal power
amplifiers being sold at Dayton or used
by CB'ers or others. Works every time
like Maalox or prunes. You would think
the topic of CW and/or amplifiers would
have died out long ago, but in ham radio
it seems, change comes, about as fast as
it takes for black strap molasses poured down
from the top of a 6 foot long fencepost in
Alaska to reach the bottom...

On a more curious note, it seems one of the ole
75 meter standouts is still going strong, even after
many years and the best efforts of R.H. Take a
listen down on 3.853 late at night for a certain
station in Co--oe Tx we all love to listen to.
He's mellowed out a tad from the "old days" when
"Johnny Reb" and "Lyin Dick" and the other
LA/TX/MS used to hang out down there, but still
an amusing SWL catch for U late nite insominacs.

Are you saying that CW doesn't have enough merits to entice amateur
radio operators to increase their skill level by using it? Maybe it
would help if you extolled the positive merits of CW rather than
spreading your vitriol on the negative shortcomings of the human race.

You said you were responding to my "original posting". That *IS* my original posting on the subject dated 5-17-02. If that is not the post you responded to then you were mistaken when you said you were responding to my original posting. The above original posting clearly indicates that my opinions are based on personal experience. Any posting on the subject subsequent to 5-17 relied on readers having read that original posting and accepting the fact that I was speaking from personal experience.

I resent your attempt at trying to obfuscate and deny my personal experiences because they don't fit well with your agenda of CW operators being perfect little angels. Your premise that CW operation magically transforms a sow's ear into a purse is just wishful thinking.

Prospective hams won't even bother to learn it if not required for licensing. So why would they find it attractive and "with merit" to increase their nonexistant skill level? Where you been? If all the code bashers believed CW had "merit" why would they all avoid learning it like it was laced with arsenic?

" This is why we haven't been seeing this kind of activity on
GMRS/FRS/interstitials. If this high-powered amplifier activity were
REALLY occuring on these services, wouldn't you think the UHF and VHF
amps would be being sold right there alongside all of those HF amps
at
the truckstops?
Stewart - N0MHS.......

It is happening "Big Time", but the "rule breakers" in this
case aren't likley to ever go to shop at truckstops or be "Truckers".
The Loads of people into running high power/unlicensed equipment at
FRS/GMRS/MURS are most likley to be people that have more of a
"purpose" for a semi-closed PL (ctcss)/DPL radio like MURS/GMRS/FRS.
These include loads of Amateurs that are using these radios to
communicate with the rest of their family & friends, the ones that had
no interest to jump thru hoops to take a Federal Amateur test, just to
play with a radio twice a year, also Scanner buffs, & the "cop/fireman
wannabees" that show up with a radio &/or camera on their belt at a
fire scene, but really don't belong to any law enforcement agency
(EVERY Cop or Fireman knows these guys WELL), also People that started
out in legitimate FRS, & then found out about higher power radios that
can be programmed to work with their existing handhelds.
Believe me, you may want to believe that EVERY "bad guy" is a
trucker, & every illegitimate use of any radio service will trace back
to a Truck driver or Truckstop, but that is a stupid conclusion.

To you two birds of a feather: Maybe it
would help if you extolled the positive merits of CW rather than
spreading your vitriol on the negative shortcomings of the human race.

> You just confirmed that he is right.

You just confirmed that you two are equally paranoid. Hams who find
CW to have merit for them will learn the code. Hams who find CW without
merit for them will not learn the code. That's the way freedom of choice
in a free society is supposed to work. Why must you try to force every HF
ham to like your favorite mode? Would you object to someone trying to
force his/her favorite mode down your throat?

Unlike CB amps that are "intentionally set up to splatter across half
their band"? Do the CB mags run articles on how to intentionally set
up an amp to splatter across half the band? Is there a splatter per
MHz spec for 27 MHz stuff?

You have to love this hobby, you learn something new every day. Thanks
Joe for carrying on the ham radio tradition. The world most
certainly is our oyster!

You're a slouch, Little Dick. *LIFE* is much easier today than before.
Don't see you willing to get back behind the butt of a horse to plow a
field; or willing to ride a pony several days--and at the risk of being
killed--to get food and supplies back to your family; or getting up in
freezing temps to wander out to the outhouse to take a dump in the middle of
the night.

Your living life quite simple these days. Makes you quite the lazy ass, I
suppose, right? My Great-Grampa would undoubtedly have that opinion...

As I've said, I'm not going to post for awhile regarding the high-power external amp issue... but I've noticed that it has now evolved to somehow include the subject of ANY radio that runs more than 2W TPO - which is really a different subject.

I have no doubt that there ARE people running 50W IC-2100 radios on MURS. Oddly enough, the few cases I've heard of involving the IC-2100 have all involved Hams.

As far as the individuals selling these radios on Ebay, can't Ebay be contacted regarding the illegal wording in these ads? Also, can't the FCC be notified, so we can BUST these jackasses?

That's right. Your original posting of May 23, 2002.

> That *IS* my
> original posting on the subject dated 5-17-02.

That's not the one I was responding to when I wrote the "no basis in
fact" stuff. Hence, you are mistaken.

> If that is not the
> post you responded to then you were mistaken when you said you were
> responding to my original posting.

That's correct. My original and your original are not the same
original.

> The above original posting clearly
> indicates that my opinions are based on personal experience.

In other words, you generalize your own behavior onto the vast
majority of other people.

> Any posting
> on the subject subsequent to 5-17 relied on readers having read that
> original posting and accepting the fact that I was speaking from
> personal experience.

That's not a reasonable expectation at all. You post so much here that
nobody can be sure of the context after a few hours, let alone almost
a week.
>
> I resent your attempt at trying to obfuscate and deny my personal
> experiences because they don't fit well with your agenda of CW

> operators being perfect little angels.

I have not obfuscated or denied any of your alleged personal
experiences.

What I have done is to refute your claim that practically all CW-using
hams
react the way you do.

When was the last time a ham using Morse/CW on the ham bands got an
NAL or
enforcement letter? Compare that to the NALs and enforcement letters
issued
to hams using voice modes. QED.

Imagine an ARS where the on-air behavior of practically all hams is as
good as that of hams on CW/Morse. Cussing, jamming, arguing, and lots
of other obnoxious behaviors would be unknown. That would be something
to be proud of.

Ed, we have no entry level license class.

The technician exam IS the old general exam, with years of new layers added on. Its the very same old exam which conveyed ALL amateur priveleges in the golden years of amateur radio.

Thus, I propose two license classes (again, so I hope you're paying attention).

Limited : a new entry level actually geared toward limited priveleges with limited knowledge.

Full: Everything else.

No Novice, no tech, no tech plus, no general, no advanced, and no extra. No superflous layers of merit badges.

Why not? They grant 100% band, power, mode, trustee, and 3rd party traffic
priveleges to the VHF+ crowd with the old General exam. And its an "entry"
level exam. Hi.

If you want this idea to be well
> accepted, you may have to adopt the principle that there be no reduction
in the
> level of knowledge required to reach the highest pinnacle.

I'd rather it not be well accepted rather than have the government force yet
more superflous licensing "standards" on Americans. I won't author that.

In that case, all
> you have accomplished is to make it one pretty big step.

>
> 73,

So you are now saying that you're original interpretation is wrong? Well,
at least that is taking some amount of responsibility.

What about MCW? Is that off the air? Is it CW?

No Dann, its not an extreme example. I could copy perfect code at 9wpm. I
could not breach the 10wpm barrier, as many others have also failed to
overcome. 13wpm is extreme to be. It might as well be 70wpm.

> I was merely suggesting a default more on the side of excellence, say,
> 13 wpm for EXTRA (keeping 5 wpm no-code for general). Someday I will
> give you some personal examples of how I witnessed substantial code

> usage outside of the US.

Perfect copy at 9wpm is excellence. Less than perfect copy would not be,
yet no FCC exam requires a perfect score. And then you have an opinion.

> I don't know where you guys come up with that extremist 50-70 wpm crap.
> That is as extreme on one side as no-code is on the other. Try the middle.

I've explained.

> So Comrade, what do you think of the more reasonable path to preserve
> excellence?
> 73 de KR4AJ

The very same code exam that Technicians, who are authorized to use CW, have
to take.

Brian

No, it's not wishful thinking. But you would have better luck getting new folks to try CW by using a positive approach, rather than coercing the government to give you a diminishing stream of applicants who were forced to do it.

And another thing, by demeaning those of us who learned "slow" code, you are the one wishing away the mode.

I must have been BSing when I said that I could copy 9wpm perfectly, could not get past the 10wpm barrier, and could not score 70% on the exam. You must be BSing when he said that 70wpm would exclude him from the ARS. Lets go ahead and raise it to something unachievable by you.

That must be a bad thing.

> This is adequate for someone who is to be licensed
> at the entry level, particularly if he/she will be starting to make
> on-the-air QSO's in CW, and thus progressively increase operating
> speed and accuracy.

Axeually, the entry level is no code, and carries with it all priveleges to
operate CW.

> However, as a maximum code speed test,
> the passing of which results in the granting of full HF privileges,

> upgraded amateur to increase his code skills beyond this level.

It conveys the same opportunity to reach 40wpm that it always has. What it
doesn't do is penalize qualified amateur who do not wish to purse that one
mode.

> And experience has shown that without this incentive, only a tiny
> handful of amateurs ever will pursue the Morse/CW mode to a
> useful proficiency level (13 - 20 WPM).

An even smaller percentage pursue FSTV. Maybe the FCC will give the ATVers
3,000 watts as an incentive.

> Therefore, while the old Novice class was an "all code No code" license
> as you call it, it was the *beginning* of the license structure, not the
end.
>
> 73 de Larry, K3LT

They can make as much or as little of the priveleges as they desire, same as you.

That was NOT my original posting. No wonder you're confused.
My original posting was 5-17-02 and explained that I was
relying on personal experience and personal opinion. I really
wish that you would pay attention to the context. It is virtually
impossible to hold your hand and have to explain the context to
you in each and every posting.

> In other words, you generalize your own behavior onto the vast
> majority of other people.

Yes, I breath so I assume the majority of people likewise breath.
Do you breath? I assume I am of the same species as most hams.
By sheer probability, there must be a multitude of hams like me
out there. And I NEVER used the words, "vast majority". In fact,
you would be wrong even if I were the only ham in the world who
cannot send proper Morse code while my hands are shaking in anger.
Your notion that all hams can send perfect code when their hands
are shaking in anger has no basis in fact. See, I can do the same
thing to you. How does it feel?

> I have not obfuscated or denied any of your alleged personal
> experiences.

Of course you did, Jim. You said my personal experiences have
"no basis in fact". Why are your experiences so sacred when
compared to mine? Oh, that's right. Sometimes I forget that
you are omniscient. Next time I forget, please remind me that
your opinions are blessed by God Almighty Himself and mine are
therefore absolutely worthless unless they agree with yours.

> What I have done is to refute your claim that practically all CW-using
> hams react the way you do.

My original posting said I was relating
my personal opinions based on my personal experiences. Why do you
attempt to deny my personal experiences? And I still believe
that the majority of coded hams cannot send decent code if their
hands are shaking in anger. Can you send readable Morse code when
your hands are shaking in anger from someone hitting you over

the head with a long handled wooden spoon? Would you mind if I observed and taped such an experiment?

Morse code is a left-brain activity (for normal people). Cursing is a right-brain activity (for normal people). Those facts alone are enough to make Morse code unsuitable for venting obscenities. That you believe Morse code will turn a sow's ear into a silk purse is laughable but we realize that you believe that Ham Heaven is awaiting the hams who have been "Once Morsed, Always Morsed" and thus have experienced Ham Salvation and have been cleansed of all possibility of future sins. Heck, I even know what your theme song is:

"Whiter than snow, yes, whiter than snow,
Morse me and I shall be whiter than snow."

> When was the last time a ham using Morse/CW on the ham bands got an
> NAL or enforcement letter?

Key-down CW is the favorite choice for jammers on the voice bands. Virtually all of the hams uttering obscenities on HF are coded hams. Last time I was on PACTOR II, some CW jock tried to jam me by leaning on his electronic keyer. Didn't work. PACTOR II virtually ignored him.

> ham-radio newsgroup is very productive.

It is productive but it isn't what everyone wants to hear. You see, I think you may be using this newsgroup to sell ham radio to people. "Ham Radio, talk it up". However, this is a policy newsgroup. Oftentimes when discussing policy, there are opposing sides. The opposing side will of necessity say things that you do not want to hear no matter how true. When you are selling something, you do not always want to reveal the opposing side if it appears negative to your product.

I am not interesting in selling ham radio. It can and will sell itself if it is of value. If you keep reducing the value, it will stop selling itself so then you need salesmen, like the organization you represent on this newsgroup. I was attracted to ham radio because it did offer challenge. Your organization had nothing to do with it. I had to study to learn code and hundreds of thousands like me were not discouraged by code.

As far as the disruption quandary, it is true. People who cannot do 13 wpm should confine their QSO's to the existing slow code 5 wpm segments of the code sub bands. I know I would, voluntarily. They should not be permitted into the faster code portions until they earn a CSCE for 13 wpm. A very small impact to no-coders indeed!

Hope you can keep an open enough mind to properly consider what I have said and not misinterpret like you often seem to do with my posts.

>How about 1 year (I think).

FRS was created by rules effective July 8, 1996.

MURS was created by rules effective November 13, 2000.

GMRS (Formerly Citizens Class A) has been around for about 50 years.

I know what you mean good buddy. But I couldn't resist putting in a
little humor even if it did contradict my statement about 120V. Having
said that, let me not play down the additional safety exposures at that
high KV found in those HF power amps. They are very deadly for people
who go into the covers and do not know what they are doing. I do know of
hams who have been killed by power amps when they were careless or
weren't sure of what they were doing.

Well, at least we agree that what you are sayig is negative to ham radio.

>If you keep reducing the value, it will stop selling
>itself so then you need salesmen

I would say, Dan, that your proclaiming that new hams learning code is
disruptive is more reducing than the things I have had to say.

>like the organization you represent on
>this newsgroup.

I work for ARRL. My boss doesn't care whether I post on rrap or not; in fact,
he would probably prefer that I don't, but there is that freedom of speech
thing. I say the things that I chose to say here. If I say them, I believe
them.

>Hope you can keep an open enough mind to properly consider what I have
>said and not misinterpret like you often seem to do with my posts.

I don't think that your wanting to ghettoize slower hams and calling their
attempts to learn and be proficient with code "disruptive." Any band is big
enough to fit all of us and if you don't like the code speed someone is using,
just spin your dial. Calling slow code disruptive just because you hear it
simply tells us how easily you are disrupted. Fortunately, most hams are a bit
more stable.

Heat. Ionizing radiation has photons that are strong enough to break bonds in molecules. Such ionization does not occur until about the middle of the ultraviolate range.

> kind of radiation that is.

That is considered to be non ionizing radiation. Maximum allowable exposure would be expressed either in terms of SAR, at .08W/kg if held with 6 in of your body (as in a homemade 2.4GHz handy talkie that used a MW oven magnetron in an uncontrolled environment (and would fail) or, for >6 in, in terms of whatever E (V/m) and H (I/m) field limits or power density (mW/cm**2) would apply at 2.4 GHz (and would also fail unless properly directed). NCT's are allowed there, of course, and in this case I would have to agree that a knowledge of RF Safety would take high priority in achieving excellence, over morse code. But if you want to get thru (as via EME), code gets thru when nothing else will! Note what SAR actually measures; it is a "specific absorption ratio", meaning the amount of actual heat energy in Watts that is absorbed per kilogram of human tissue. Note too that heat absorption, not radioactivity level, is the main concern according to this safety standard.

I read it that Ed disagreed with me. "Most hams disagree with your interpretation....of ham radio. I do." This clearly states that "I do disagree too". If the word agree had been chosen, then 'I do' would have meant that Ed agreed. The word "do" in Ed's last sentence is clearly a modification of the predicate "disagree".

Ed, do you agree that you disagreed with me then but now agree with this post? I disagree with N0iMD's latest Burkeism.

Because, as the messenger has stated, you are being measured according
to you license class by the general public. It it futile to convince
hams that no code is real ham radio when the general public will not
agree with. If you don't mind be measured as lower in achievement by the
general public, i.e. equivalent to CB radio, then it doesn't matter.
However, since you have shot the messenger several times, I must assume
that it does matter, but, convincing hams only, that no code is just as
good as code, is futile with respect to convincing the general public
since hams are only a negligible subset of the general public.

Thanks, Ed. I just wish I knew what the percentage was when I started
in 1962 as WN2CJV.

Evidently... there is a ham selling modified 2100H radios on Ebay, and
he mentions MURS:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1355829496

The funny thing is, there are actually jackasses out there willing to
bid $255 for a $149 radio...

http://www.gigaparts.com/radioindex.php

Oh, BTW, did I already mention that this seller is a ham.

You plagiarized it? Whose original posting was it?

>No wonder you're confused.

Not me. It's perfectly clear.

>My original posting was 5-17-02 and explained that I was
>relying on personal experience and personal opinion.

But that's not the post that I responded to. In your post of 5-23-02, you made it clear that you were talking about a general case, not just yourself.

>I really wish that you would pay attention to the context.

Then provide some context. Write clearer posts. It's the transmitting station's job to send the message clearly and intelligibly.

>It is virtually impossible to hold your hand and have to explain the context
to
>you in each and every posting.

All you have to do is write clearly, Cecil. Perhaps that is asking too much.

>> In other words, you generalize your own behavior onto the vast
>> majority of other people.
>
>Yes, I breath so I assume the majority of people likewise breath.
>Do you breath?

Nope.

I breathe.

> I assume I am of the same species as most hams.

You have told us many times that you are actually a 300,000 foot tall space alien in disguise. Perhaps 300,000 foot tall space aliens' hands shake when they get angry, but that is not universally true of human beings.

>By sheer probability, there must be a multitude of hams like me
>out there.

Nope. Not at all.

> And I NEVER used the words, "vast majority". In fact,
>you would be wrong even if I were the only ham in the world who
>cannot send proper Morse code while my hands are shaking in anger.

That's not true.

>Your notion that all hams can send perfect code when their hands
>are shaking in anger has no basis in fact.

Where have I ever said that anyone can send code when their hands are shaking in anger? You are very confused, cecil. You sound angry, yet you are able to type very well. Thus, your claim is disproved.

>See, I can do the same thing to you.

No, you cannot "do the same thing to me", because what I do is shine the light of Irrefutable Truth and Elegant Logic upon your errors, mistakes and false assumptions.

> How does it feel?

How does what feel?
>
>> I have not obfuscated or denied any of your alleged personal
>> experiences.
>
>Of course you did, Jim.

No, I did not. You are confused and mistaken, Cecil.

Why don't you take a stress pill and lie down?

>You said my personal experiences have
>"no basis in fact".

Nope. I said your hypothesis had no basis in fact.

> Why are your experiences so sacred when
>compared to mine? Oh, that's right. Sometimes I forget that
>you are omniscient. Next time I forget, please remind me that
>your opinions are blessed by God Almighty Himself and mine are
>therefore absolutely worthless unless they agree with yours.

Sounds pretty angry to me, but you keep right on typing. Fascinating.
>
>> What I have done is to refute your claim that practically all CW-using
>> hams react the way you do.
>
>My original posting said I was relating
>my personal opinions based on my personal experiences.

Your "original" was not the same as my "original".

>Why do you
>attempt to deny my personal experiences?

I don't. I simply refute your faulty conclusions based on them.

>And I still believe
>that the majority of coded hams cannot send decent code if their
>hands are shaking in anger.

I agree with that.

>Can you send readable Morse code when
>your hands are shaking in anger from someone hitting you over
>the head with a long handled wooden spoon?

I don't know. My hands don't shake in anger, and I don't condone domestic violence.

Who has hit you over the head with a long handled wooden spoon, Cecil? When did this last happen? Perhaps the impact caused a concussion, distorting your perception.

>Would you mind if I observed and taped such an experiment?

Sounds like you are threatening physical violence upon me. Is that how you deal with disagreement, Cecil?
>
>Morse code is a left-brain activity (for normal people).

How do you know that? I can copy Morse heard in either ear. Are you an auditory processing specialist?

>Cursing is a right-brain activity (for normal people).

Define "normal". Are you saying left handed people are not normal? How about the ambidextrous?

If the right brain controls the left side of the body, how come righthanded people can write cusswords?

>Those facts alone
>are enough to make Morse code unsuitable for venting obscenities.

Nope. Your hypothesis is not correct. Morse is just like language, though it's not a language in and of itself.

>That you believe Morse code will turn a sow's ear into a silk
>purse is laughable but we realize that you believe that Ham
>Heaven is awaiting the hams who have been "Once Morsed, Always
>Morsed" and thus have experienced Ham Salvation and have been
>cleansed of all possibility of future sins.

I think you've been hit on the head a few too many times, Cecil.

> Heck, I even know what your theme song is:
>
>"Whiter than snow, yes, whiter than snow,
>Morse me and I shall be whiter than snow."

Nope. That's not it.
>
>> When was the last time a ham using Morse/CW on the ham bands got an
>> NAL or enforcement letter?
>
>Key-down CW is the favorite choice for jammers on the voice bands.

That's not Morse, it's just a carrier. And how would you know it's the
favorite?

Besides, it doesn't answer the question.

When was the last time a ham using Morse/CW on the ham bands got an
NAL or enforcement letter?

I think you are avoiding that question because the answer proves my point and
disproves yours.

>Virtually all of the hams uttering obscenities on HF are coded hams.

So? It's not about the test. The Morse test is all but gone now, and will soon
be just a memory. Get real, Cecil - the test issue is a dead duck.

It's the USE of Morse that is the key. Hams USING Morse on the air are, as a
general rule, extremely well behaved. They set a very high standard - that's
why some folks hate the mode so much.

Nope. It doesn't. When's the last time you operated on an HF ham band, Stew?

>However, hams are taught to use only as much power as
>necessary to maintain a contact(I don't know how many follow the rule,
>and how far they will go in interpreting it, but I'm going to assume
>most follow it to a certain degree - although it isn't the "prime
>directive" of each and every ham).

Most of the hams I hear and work on the HF ham bands are running about 100
watts output to antennas that are fairly simple, like G5RVs and verticals.
There are lots of QRP ops, most of whom don't have big antennas. (I worked
Hawaii and Alaska, on 20 meters from EPA last November with 5 watts output to
an inverted V at 35 feet). This was in a contest where I had to compete with
other stations running the legal limit and big beams. Major mojo.

What is not civil about my posts? Have I invited you to "go soak your head?" Have I suggested that you "not let the door hit you...?" No, I merely repeat myself again and again, and I have made note of it. I don't sit on the fence. My opinions and views don't change dramatically from year to year. You can count on me to be consistent in what I think and say.

My opinions, for example:

CW is just another mode. Test it as other modes are tested.
Morse exams have outlived their usefullness by at least 15 years, probably 30 or 40 years, but I don't have the history on it.
The Novice CW subbands are grossly underutilized (dead).
We need only one full license and only one entry level license. Anything else are merit badges for the insecure.
The Technician was never designed nor meant to be an entry level license.
The Technician conveys huge priveleges that might not be suitable for beginners.
Thus a new entry level license is in order.
Dick is nuts.
Larry is nuts.
Steve is nuts.
Val is a Troll, bases his ham knowledge on and repeats what his ham neighbor says.
Bruce is an ignorant Troll.
Dann Finn is in collusion with Larry, very mean spirited, and solicits

pornography to be sent to my e-mail address.

So, if you ask me next month what I think of the Technician license, I will probably say the very same thing. Ditto Dick, Larry and Bruce.

So do I. I don't think that level of RF belongs in an entry level license.

But if you want
> to get thru (as via EME), code gets thru when nothing else will!

Note that they use very slow code.

Note
> what SAR actually measures; it is a "specific absorption ratio", meaning

Thus, I propose that the new entry level license be capped at power levels where no RF safety study is required, or 200 watts, whichever is less.

Which messenger? The one who reports facts, or the one who has an
editorial?

> you are being measured according
> to you license class by the general public.

The general public doesn't know the license classes. Hell, there are so
many of them that even hams have trouble figuring them all out. Not all the
"if I'm an Tech and I pass the code..." questions.

It it futile to convince
> hams that no code is real ham radio when the general public will not
> agree with.

Ham radio is real ham radio. Just convince yourself of that. Forget about
the caste system.

>If you don't mind be measured as lower in achievement by the
> general public, i.e. equivalent to CB radio, then it doesn't matter.

It doesn't matter anyway. They are ignorant on the matter. You are not,
but feign ignorance to bolster your views.

If you are willing to allow ham radio to sell itself, why are you not
willing to allow OOK/Morse/CW to sell itself?

I agree. At 2.4GHz, for uncontrolled environments, they will probably
have to stay around .6 to 1.5 W ERP to stay below the SAR limit for < 6
inches. I guess Ed would know what the actual value would be. This is
something that really should be covered by the FCC for new licensees.

> But that's not the post that I responded to. In your post of 5-23-02, you made
> it clear that you were talking about a general case, not just yourself.

That is absolutely NOT true. I have told you it was not true yet you insist
on obfuscation. Here's that posting:

"Since netnews is not real time, a posting can be composed and edited to
achieve any desired level of emotionalism. If a poster's hands are shaking
with emotion to the extent that he cannot type, he can wait a few minutes
until his hands quit shaking. One cannot do that with real time CW."

The conditional statement presupposes that the CW operator's hand is shaking
uncontrollably. You admit later in this posting that it is a true statement
thus contradicting your own argument.

> Where have I ever said that anyone can send code when their hands are shaking
> in anger?

In your response to my above posting which assumes that the operator's hand
is shaking in anger. But I'm willing to throw in the towel and agree with
you that you are omniscient and were personally sent by God to straighten
out ham radio. You are a super being and I am but a lowly human. I don't
know how I have lived my life without your guidance. Next time I see you,
I will kiss your feet and beg for forgiveness.

> No, you cannot "do the same thing to me", because what I do is shine the light
> of Irrefutable Truth and Elegant Logic upon your errors, mistakes and false
> assumptions.

Yeah, yeah, I know, you are omnipotent and sit on the right hand of God
when you are not posting here. Your $hit doesn't even stink.

> Your "original" was not the same as my "original".

Then it is no wonder that you are confused. You completely lost the context.
In the actual original posting, I made it clear that I was speaking from
personal experience.

> >And I still believe
> >that the majority of coded hams cannot send decent code if their
> >hands are shaking in anger.
>
> I agree with that.

I am glad to see you changed your mind. Above is the posting with which you disagreed. It assumes that the operator's hand is shaking in anger. But of course, an omniscient being such as yourself can never be mistaken or make a mistake.

> >Can you send readable Morse code when
> >your hands are shaking in anger from someone hitting you over
> >the head with a long handled wooden spoon?
>
> I don't know. My hands don't shake in anger, ...

Then I wasn't talking about you, was I? See the conditional statement above which you apparently completely missed prior to your mad dog attack.

> >Morse code is a left-brain activity (for normal people).
>
> How do you know that? I can copy Morse heard in either ear. Are you an auditory
> processing specialist?

Morse code uses a language. The language processing center is in the left brain in most people.

> >Cursing is a right-brain activity (for normal people).
>
> Define "normal". Are you saying left handed people are not normal? How about
> the ambidextrous?

Reverse-brained people are not normal. It has nothing to do with handedness. Some people's brains are mirror images of the average brain. A small minority of individuals have their speech processing centers in the right brain.

> Nope. Your hypothesis is not correct. Morse is just like language, though it's
> not a language in and of itself.

What I have said is based on the assumption that Morse is just like language and is processed in the speech centers of the brain. Language is processed in the left brain in most people. Obscenities originate in the right brain in most people. Some people who have had their speech centers destroyed by an accident can shout only obscenities.

> It's the USE of Morse that is the key. Hams USING Morse on the air are, as a
> general rule, extremely well behaved. They set a very high standard - that's
> why some folks hate the mode so much.

Some people realize that your assignment of supernatural powers to CW is just a bunch of excrement. CW does not magically change a bad guy into a good guy. It is simply unrewarding to misbehave while using CW except for jamming purposes of course. Digital signals are quite often jammed by your lily white CW operators.

You win, Jim. Who am I to argue with an omniscient being?

"Joe S." <joe@schlatter.org> wrote in message news:<ad6j5l0bnj@enews4.newsguy.com>...
> What is MURS and why should I give a shit?

MURS (Multi-Use Radio Service) is a no-license VHF personal radio service which operates on 151.820, 151.880, 151.940, 154.570, and 154.600 MHz with a maximum Transmitter Power Output limit of 2 Watts. The FCC MURS rules permit voice and data communication; as well as external gain antennas. Unlike some other services, there are no restrictions on business activities with MURS, and the 2W power limit works as a major benefit for allowing more users per channel. With the latest changes to the FCC MURS rules, most any low-power VHF Part 90 business radio that was certified before May 2002, can be used on at least some of the MURS frequencies(radios certified after 5/2002 will only need to be certified under Part 95). Additionally, the new rules no longer specify an ERP (Effective Radiated Power) restriction of 2 watts - so it is now possible to build quite efficient stations, using external gain antennas.

>of human tissue.

The term is Specific Absorbtion Rate. It is indeed expressed in watts/kilogram.

>Note too that heat absorption, not radioactivity level,
>is the main concern according to this safety standard.

Actually, the standard doesn't stipulate that heat is the mechanism; it just notes that at an SAR of 4 watts/kilogram (translate: a human in a close just big enough to hold him with a 500-watt heater) unwanted, albeit often temporary, biological effects have been seen in numerous animal and human (volunteer) studies.

I am reminded of the gendarmes who mounted their 10 GHz radars on the rear window. Does make you wonder what the guys with the CB mentality -- need POWER, Jake -- are going to do with Bluetooth, etc for the biz of the local cataract surgeons.

Pure baloney.... there are a ton of them, I can name quite a few right in my
"own backyard" as it is. (And some of these are not the old timers either)

>
> What that leaves, is the Hams who like to interface things to a

> those projects.

Who's fault is that? Could it be the manufacturer's? I cannot buy enough
parts to make a "decent" rig even 1/10 of the quality and stability of
today's rigs locally here where I live. Christ, the manufacturers are also
responsible for the virtual death of some of the VHF and above bands.

> companies in America will continue, and Ham radio will go to

> the same place that model railroaders, and slot car racing went.
>

Hmmm.... the numbers have (for the most part) gone up every year. Granted some years were definitely not as large in growth as others, but almost every year for the past 20-30 years has appreciated some level of growth, not decline. If there is a death in ham radio, it is going to come from lack of promotion on a national level down to the local/club level and of course the personal level. If we also spent as much time whining about what is supposedly so shitty about ham radio, and spent that time educating prospective hams and new hams we would have a greater growth that we currently do have.

> Hobbies die, and people die. MURS is still-born.
>

That is true if you want them to, or a person can be proactive and work for positive change or at least to keep things at a even keel.

So much for the cease fire. You call for a cease fire then proceed to
continue the argument. So what is it? Moron.

Pardon me for saying this, but you sound like you're backpeddling a bit.
In all reality, what's the difference between someone running a 2W HT
into a 100 watt output amplifier, or someone running a modified Motorola
Micor at 100 watts?

It's not about "amplifiers" as much as it's about ignoring the power
limits of the law.

For as long as I've been a ham, there have been doom'n'gloom types.
My research indicates they go all the way back to the days of "Rotten
Radio".

Just in my time, the following have been cited as leading to the
"death of amateur radio":

- SSB and transceivers
- incentive licensing
- FM and repeaters
- solid state electronics
- dominance of Japanese equipment
- Bash books
- VEC system
- question pools
- computers, the internet, videogames
- demographics, economics, politics
- "legacy" modes

And of course, the universal scapegoats:

- code tests
- nocodetest licenses
- medical waivers

Yet the growth in both size and depth of the ARS continues.

I'll ask him. The reason I ask is that the numbers sometimes differ somewhat from those on the AH0A site and other sources that list only current operator licenses. Most of the entries look like they came from callbooks.

Some of the "bumps in the curve" may be due to rules and recordkeeping changes
such as counting station vs. operator licenses, and
expired-but-in-the-grace-period licenses.

Maybe we should require some kind of identifying
mark on the individual to indicate license class
if he/she operates a radio anywhere in public view?

Perhaps a tattoo on the forehead - T for Technician,
G for General and E for Extra. As the individual
upgrades, the previous class letter could be X'ed
out.

Expiring minds want to know license class!

Try again, I have in the past built a lot of ham gear, some from
kit, some completely homebrew and can still do it. Just because
you are incapable of building something doesn't mean everyone else
is also.

I computed the average annual growth rate for each 5 year period in the
data to average out the bumps (along with the US population growth rate
for comparison) and found only one period in the 75 years with a sustained
growth rate lower than it is now. That period was 1968-1975. This
period has a suspicious correspondence with the introduction of incentive
licensing, though I guess there are other things it could correlate with
as well.

I think you are correct, however, that the current situation isn't
unique, and it did turn around pretty well the last time this happened.

Dennis Ferguson

4965. OT: Need a ham club in Chattanooga TN

Newsgroup: rec.radio.amateur.policy
Date: 2002-05-31 20:30:25 UTC
From: N4IXT <n4ixt@arrl.net>
Message-ID: <ad8mlf$vet5q$1@ID-105647.news.dfncis.de>
Source record: 44134

I have a friend of a friend who currently lives near Chattanooga TN. This fall she is going to Africa to be a missionary. She is in the process of studying to get her tech, then general license so she will be able to communicate back home.

I'm looking for a club in the Chattanooga area who might be able to give her a little guidance, answer questions, maybe give her a place to test. If anyone is in that area and can give me a contact name/number I can direct her to, I sure would be appreciative.

Thanks,

Robert / N4IXT

The ARRL site http://www.arrl.org lists the Chatanooga Radio Club.
Contact is Charles E Curle AD4F. Web site is www.qsl.net/w4am. Club is
in Ooltewah, apparently a suburb.
Wish the lady luck for me.

> Micor at 100 watts?

HUGE difference. The "bigger is better" External High-Power Amplifier
"arms race" culture that exists on 11m CB leads to a never-ending
escalation in amplifier power... nowadays 3000W "just isn't enough".

With use of integral radios(with internal amplifiers) on GMRS/MURS,
there is at least a somewhat "reasonable upper power bound" that
exists on these services. Even in light of this, it should be noted
that the vast majority of users on MURS use rules-conforming handheld
radios having <= 2W TPO capability. While there have been a few
recent reports of hams using and/or selling low-cost 50W IC-2000
mobile ham rigs on MURS - these individuals are being pressured to
"cease and desist" their high-profile illegal activities.

Additionally, while it can't be ruled out that some individuals have
experimented with the usage of external high-power amplifiers on
MURS/GMRS, it is quite clear that the usage of these devices is not
culturally endemic on these services, as it is on 11m CB.

> It's not about "amplifiers" as much as it's about ignoring the power
> limits of the law.

While I understand your point; as a MURS user, I'm personally much
more concerned with an individual running an external 500W amplifier,
than I am with someone running a 5W handheld with a rubber duck dummy
load antenna.

Common misconception... just because they are allocated, doesn't mean they are used.

I've got plenty of good radios and antennas...

Hams better start dealing with reality - or we all are going to wake
up one day soon, and - POOF! there goes 1.25M!

Be sure she understands the "no pecuniary interests" rule in ham radio.
Missionaries have been known to run into trouble with this from
time to time.

You're a fairly amazing fella, Gadfly.

> My opinions,

And you're fairly entitled to them, as everyone else is. But you find it impossible to understand that your opinions are *your opinions*, not first principles eligible to be forced onto the rest of the civilized world.

> for example:
>
> CW is just another mode.

Yep. But, strangely, it's the only mode that demands the level of training required for humans to be able to actually use it.

> Test it as other modes are tested.

Which amounts to no testing at all. Not too an obscure concept in the ham radio testing world of today, actually. So why even have such a thing as tests? Just dump them right along with all the categories of licenses. We see where you're coming from.

> 30 or 40 years, but I don't have the history on it.

You don't have a grasp of it, either.

> The Novice CW subbands are grossly underutilized (dead).

Yep, all you Novices abandoned them for a microphone on 10 meters. Novices used to talk to each other on the novice bands, practicing, improving their CW skills and code speed. First thing you knew, they found themselves ready for the General test. What a concept!

But as for you, well, when no OT answered your forlorn CQ at a couple words per minute or whatever, you found your calling. You know what it is, just as we do.

>
> We need only one full license and only one entry level license.

Well, that's all you ever had! Problem is, not that many people, including the folks at the FCC, seem to buy your story. Have you ever worked in sales?

> Anything
> else are merit badges for the insecure.

I don't think you're exactly qualified to make such a pronoucement to the world in general. But your opinion is yours, and you're welcome to it.

>
> The Technician was never designed nor meant to be an entry level license.

Nope. The ARRL and the FCC managed to really screw up the Novice license by awarding it HF fone privileges. Novice enhancement, they called it, but it should have been novice termination. That was the result. More of the ongoing "get the numbers up" nonsense.

>
> The Technician conveys huge priveleges that might not be suitable for
> beginners.

Dang, we agree on something! But fact is virtually none of them seem to be dumb enough to actually try to use those high power privileges to the max. Fortunately.

>
> Thus a new entry level license is in order.

Been around for over 50 years. Known as the Novice. Should be reviewed and refurbished. Won't be. No one who matters who could fix it cares.

>
> Dick is nuts.
> Larry is nuts.
> Steve is nuts.

You may have your opinion, as inaccurate as it is. I think you might have understood that there are opinons are subject to review. And there will be others who regard your activities of the past couple decades as something less than rational. Like insisting on self-flagellation. And terminal stubbornness, not to mention stupidity.

Do you happen to have a neighbor who is a knowledgeable longtime ham whom you might lean on for some real, accurate information??? Sure would be a possible source of assistance, of which you clearly are in dire need.
